

Analysis Of Chinese Characters By Gd Wilder And Jh Ingram

This is a reproduction of a book published before 1923. This book may have occasional imperfections such as missing or blurred pages, poor pictures, errant marks, etc. that were either part of the original artifact, or were introduced by the scanning process. We believe this work is culturally important, and despite the imperfections, have elected to bring it back into print as part of our continuing commitment to the preservation of printed works worldwide. We appreciate your understanding of the imperfections in the preservation process, and hope you enjoy this valuable book.

An innovative text which adopts the tools of cultural studies to provide a fresh approach to the study of Chinese language, culture and society. The book tackles areas such as grammar, language, gender, popular culture, film and the Chinese diaspora and employs the concepts of social semiotics to extend the ideas of language and reading. Covering a range of cultural texts, it will help to break down the boundaries around the ideas and identities of East and West and provide a more relevant analysis of the Chinese and China.

This book proposes a new approach in the study of Chinese characters based in the analysis of the phonetic groups to which the characters belong. The book will allow the reader to learn easily most of the Chinese characters. It includes about 600 characters, those required for the HSK 1 to 3 levels, and some more needed to understand them.

The complete book of Chinese characters that covers every aspect of, and therefore answers all the questions one might have for, these fascinating ancient language symbols from script evolution to colour-illustrated biographies including proper Stroke sequences and from the complete Compound anatomy to the trinity of Sounds, Semantics, and Synopses. This series of books is the ultimate guide and reference for first-time learners as well as masters of the language. It is for both the teachers and self-motivated students. This is the 1st volume of the series, covering the 1st 100 most frequently used Chinese characters as presented with their full colour illustrations and arranged in columns from right to left on the front cover. For its extensive colour illustrations throughout, this book is best read with a colour screen reader.

A tour-de-force by rising indy comics star Gene Yang, American Born Chinese tells the story of three apparently unrelated characters: Jin Wang, who moves to a new neighborhood with his family only to discover that he's the only Chinese-American student at his new school; the powerful Monkey King, subject of one of the oldest and greatest Chinese fables; and Chin-kee, a personification of the ultimate negative Chinese stereotype, who is ruining his cousin Danny's life with his yearly visits. Their lives and stories come together with an unexpected twist in this action-packed modern fable. American Born Chinese is an amazing ride, all the way up to the astonishing climax. American Born Chinese is a 2006 National Book Award Finalist for Young People's Literature, the winner of the 2007 Eisner Award for Best Graphic Album: New, an Eisner Award nominee for Best Coloring and a 2007 Bank Street - Best Children's Book of the Year. This title has Common Core Connections

This volume uses unique properties of Chinese script to focus on morphological analyses during the character and word recognition process, though some of the reported work also pertains to the use of phonological information. In addition, this volume contains work on syntactic and pragmatic processes during sentence reading and three chapters that examine on-line processes. A comprehensive appraisal of cognitive processes during the reading of Chinese script that includes studies conducted by leading researchers from within and outside the mainland, this volume will be of interest to all those studying reading and visual symbol processing.

This book presents the most comprehensive synthesis and analysis of major developments in reforming programs in modernizing the Chinese writing system. It traces the language policy and planning related developments for Chinese characters, with particular emphasis on post-1950 period in the People's Republic of China (PRC) and the more recent challenges that technology, and particularly the World Wide Web, have posed for the language.

This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

Analysis of Chinese Characters Courier Corporation

An analysis of 1000 Sino-Japanese characters.

"The study of the analysis of Chinese characters is useful to those who merely wish to read or write the Chinese language. Part of the work of any analysis is to organize the characters into groups which reveal their relationships and thus lighten the burden of memorizing. A still more important function of character analysis is to recommend the individual written words to the student's own linguistic powers so that he may feel at home with them. This is done by showing, as far as possible, how they reached their present shape and the reasoning that guided the generations of people who invented and perfected them." From the Preface. A Wade-Giles - Pinyin Conversion Table has been added to this edition.

How Chinese characters triumphed over the QWERTY keyboard and laid the foundation for China's information technology successes today. Chinese writing is character based, the one major world script that is neither alphabetic nor syllabic. Through the years, the Chinese written language encountered presumed alphabetic universalism in the form of Morse Code, Braille, stenography, Linotype, punch cards, word processing, and other systems developed with the Latin alphabet in mind. This book is about those encounters—in particular thousands of Chinese characters versus the typewriter and its QWERTY keyboard. Thomas Mullaney describes a fascinating series of experiments, prototypes, failures, and successes in the century-long quest for a workable Chinese typewriter. The earliest Chinese typewriters, Mullaney tells us, were figments of popular imagination, sensational accounts of twelve-foot keyboards with 5,000 keys. One of the first Chinese typewriters actually constructed was invented by a Christian missionary, who organized characters by common usage (but promoted the less-common characters for "Jesus" to the common usage level). Later came typewriters manufactured for use in Chinese offices, and typewriting schools that turned out trained "typewriter girls" and "typewriter boys." Still later was the "Double Pigeon" typewriter produced by the Shanghai Calculator and Typewriter Factory, the typewriter of choice under Mao. Clerks and secretaries in this era experimented with alternative ways of organizing characters on their tray beds, inventing an input method that was the first instance of "predictive text." Today, after more than a century of resistance against the alphabetic, not only have Chinese characters prevailed, they form the linguistic substrate of the vibrant world of Chinese information technology. The Chinese Typewriter, not

just an "object history" but grappling with broad questions of technological change and global communication, shows how this happened. A Study of the Weatherhead East Asian Institute Columbia University

In recent years, rapid progress has been made in computer processing of oriental languages, and the research developments in this area have resulted in tremendous changes in handwriting processing, printed oriental character recognition, document analysis and recognition, automatic input methodologies for oriental languages, etc. Advances in computer processing of oriental languages can also be seen in multimedia computing and the World Wide Web. Many of the results in those domains are presented in this book. Contents: Intriguing Aspects of Oriental Languages (C Y Suen et al.) The Generation of Oriental Characters: New Perspectives for Automatic Handwriting Processing (R Plamondon et al.) A New Synthesizing Method for Handwriting Korean Scripts (D-H Lee & H-G Cho) Differentiating Between Oriental and European Scripts by Statistical Features (L Lam et al.) Gray-Scale Nonlinear Shape Normalization Method for Handwritten Oriental Character Recognition (S-Y Kim & S-W Lee) Distributed Autonomous Agents for Chinese Document Image Segmentation (J Liu & Y Y Tang) Ink Matching of Cursive Chinese Handwritten Annotations (D P Lopresti et al.) On-Line Handwritten Chinese Character Recognition Directed by Components with Dynamic Templates (X Xiao & R Dai) A Reliability Design Methodology for Chinese Character Recognition (Y S Huang et al.) Typeface Identification for Printed Chinese Characters (Y-H Tseng et al.) A Self-Organizing Hierarchical Classifier for Multi-Lingual Large-Set Oriental Character Recognition (H-S Park et al.) Printed Chinese Character Similarity Measurement Using Ring Projection and Distance Transform (P C Yuen et al.) Segmentation and Recognition of Continuous Handwriting Chinese Text (C Hong et al.) Network-Based Approach to Korean Handwriting Analysis (B-K Sin & J H Kim) Comparison of Feature Performance and Its Application to Feature Combination in Off-Line Handwritten Korean Alphabet Recognition (K Seo et al.) Readership: Graduate students and researchers in computer science. Keywords: Oriental Character Recognition; Handwriting Recognition; Document Analysis and Recognition; OCR (Optical Character Recognition); Document Image Analysis

Excerpt from A Grammar for Component Combination in Chinese Characters A linguistic analysis of one aspect of the structure of Chinese characters is presented. The analysis is an extension into two dimensions of a general approach to one-dimensional language study Results of the analysis are in the form of a three level generative grammar. The first level formalizes restrictions governing the general complexity of well formed Chinese characters; the second level formalizes co-occurrence constraints among character components and the particular spatial arrangement of these components in classes of characters; the third level constitutes a procedure for selecting actual components from a lexicon. Finally an evaluation of the grammar is presented, in terms of criteria used in evaluating natural language grammars. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.

The heart of this book is a series of etymological lessons, in which approximately 2300 Chinese characters are classified according to 224 'primitives' upon which they are based. For each character Father Wieger gives the modern form, its archaic form, literary pronunciation (Wade system), explanations of origin, semantic content of component parts, related characters, variants forms, quotations of classical usage, and similar material. To make his book more useful Father Wieger has also incorporated a tremendous number of reading aids for the student - listings of the primitives; an index of the characters analyzed, arranged by number of strokes; a listing of 858 phonetic elements, arranged by number of strokes; a listing of about 10,000 characters by phonetic element; a lexicon by transliteration, comprising about 7,000 characters; and a lexicon of about 10,000 characters according to the customary modern system of 214 radicals devised by K'ang-hsi.

This annotated bibliography covers materials on Chinese language and linguistics published from 1940 through 1979.

Approximately 150 entries are included, covering textbooks, dictionaries, study and teaching materials on Mandarin Chinese, general descriptions of Chinese, linguistics, writing system, and bibliographies. An author index is appended. (JB)

Learning Chinese can be frustrating and difficult, partly because it's very different from European languages. Following a teacher, textbook or language course is not enough. They show you the characters, words and grammar you need to become proficient in Chinese, but they don't teach you how to learn them! Regardless of what program you're in (if any), you need to take responsibility for your own learning. If you don't, you will miss many important things that aren't included in the course you're taking. If you study on your own, you need to be even more aware of what you need to do, what you're doing at the moment and the difference between them. Here are some of the questions I have asked and have since been asked many times by students: How do I learn characters efficiently? How do I get the most out of my course or teacher? Which are the best learning tools and resources? How can I become fluent in Mandarin? How can I improve my pronunciation? How do I learn successfully on my own? How can I motivate myself to study more? How can I fit learning Chinese into a busy schedule? The answers I've found to these questions and many others form the core of this book. It took eight years of learning, researching, teaching and writing to figure these things out. Not everybody has the time to do that! I can't go back in time and help myself learn in a better way, but I can help you! This book is meant for normal students and independent language learners alike. While it covers all major areas of learning, you won't learn Chinese just by reading this book. It's like when someone on TV teaches you how to cook: you won't get to eat the delicious dish just by watching the program; you have to do the cooking yourself. That's true for this book as well. When you apply what you learn, it will boost your learning, making every hour you spend count for more, but you still have to do the learning yourself. This is what a few readers have said about the book: "The book had me nodding at a heap of things I'd learnt the hard way, wishing I knew them when I started, as well as highlighting areas that I'm currently missing in my study." - Geoff van der Meer, VP engineering "This publication is like a bible for anyone serious about Chinese proficiency. It's easy for anyone to read and written with scientific precision." - Zachary Danz, foreign teacher, children's theatre artist About me I started learning Chinese when I was 23 (that's more than eight years ago now) and have since studied in many different situations, including serious immersion programs abroad, high-intensity programs in Sweden, online courses, as well as on the side while working or studying other things. I have also successfully used my Chinese in a graduate program for teaching Chinese as a second language, taught entirely in Chinese mostly for native speakers (the Graduate Institute for Teaching Chinese as a Second Language at National Taiwan Normal University). All these parts have contributed to my website, Hacking Chinese, where I write regularly about how to learn Mandarin.

This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps (as most of these works have been housed in our most important libraries around the world), and other notations in the work. Reinforce your written Chinese with this practice book for the best-selling Tuttle Learning Chinese Characters. Learning Mandarin Chinese Characters helps students quickly learn the basic Chinese characters that are fundamental to the language. Intended for self-study and classroom use, this character workbook presents 178 Chinese characters and over 534 common words using these characters. These are the characters and words students need to know if they plan to take the official Chinese government HSK Level 1 Exam or the Advanced Placement (AP) Chinese Language and Culture Exam. Each character is presented in a very simple and clear way. A step-by-step diagram shows how to write the character, and boxes are provided for freehand writing practice. The meaning and pronunciation are given along with the key vocabulary compounds and an example sentence. Review exercises reinforce the learning process and an index at the back allow you to look up the characters according to their English meanings or romanized Hanyu Pinyin pronunciation. Key features of this Chinese workbook include: Designed for HSK Level 1 and AP exam prep Learn the 178 most basic Chinese characters Example sentences and over 534 vocabulary items Step-by-step writing diagrams and practice boxes

This first book of its kind gives a comprehensive introduction to Chinese, Japanese and Korean (CJK) Computing. Every possible related issue is covered but an in-depth look into Chinese, Japanese and Korean computing problems and environment in particular, is also discussed. Besides being of interest to Oriental Language computing professionals, it also provides a clear overview of the subject to individuals learning CJK Computing and computer companies working on CJK systems.

Excerpt from Analysis of Chinese Characters The author of the great Chinese English dictionary Mr. Giles, has not hesitated to express most trenchantly his contempt of etymology as it has been applied to Chinese Characters. He says that "Much of the etymology of the Shuo Wen is childish in the extreme", and that the phonetic principle of combination is the only one of which we can pretend to know anything. Notwithstanding the ridicule heaped upon it, scholars, like Chalmers, Chalfant, Wieger and others have continued to pursue the fascinating study of the origin of these symbols and have given us most interesting results. These results are so convincing that in the teaching of character writing we have unhesitatingly adopted the principle that the etymology of the earliest Chinese writers on the subject, childish though it may often be and fanciful, is yet superior to the numerous mnemonics that have been invented by foreign students to assist in the difficult task of memorizing the forms of a few thousand characters. The student of these pages may often consider the etymology suggested fanciful and the logic of the combinations far fetched but the following consideration should be borne in mind. They are the products of Chinese fancy and imagination and to some extent show the workings of the Chinese mind. Therefore they interest us who are students of Chinese thought. Moreover they often may only seem to be fanciful because we are ignorant of the ancient customs out of which they arise, or of the forms of the utensils of which they are pictures, or of the variations of pronunciation in the different dialects. If any one of us were entrusted with the task of inventing written symbols for both concrete objects and abstract ideas it is doubtful if we would produce anything much less fanciful and we certainly could produce nothing of such rich historic interest, as certainly invests the 3000 most primitive characters. Writing Chinese characters is a task of memory. Modern pedagogy. insists on the value of logical or even fanciful links between ideas for fixing them in mind.
