

Ancestral Passions The Leakey Family And The Quest For Humankind's Beginnings A Touchstone Book

Identify Birds with Arizona's Best-Selling Bird Guide! Make bird-watching in Arizona even more enjoyable. With Stan Tekiela's famous bird guide, field identification is simple and informative. There's no need to look through dozens of photos of birds that don't live in your area. This handy book features 151 species of Arizona birds organized by color for ease of use. Full-page photographs present the species as you'll see them in nature, and a "compare" feature helps you to decide between look-alikes. Inside you'll find: 151 species: Only Arizona birds! Simple color guide: See a yellow bird? Go to the yellow section Stan's Notes: Naturalist tidbits and facts Professional photos: Crisp, stunning images This second edition includes six new species, updated photographs and range maps, expanded information, and even more of Stan's expert insights. So grab *Birds of Arizona Field Guide* for your next birding adventure—to help ensure that you positively identify the birds that you see.

Evolutionary science is not only one of the greatest breakthroughs of modern science, but also one of the most controversial. Perhaps more than any other scientific area, evolutionary science has caused us all to question what we are, where we came from, and how we relate to the rest of the universe. *Encyclopedia of Evolution* contains more than 200 entries that span modern evolutionary science and the history of its development. This comprehensive volume clarifies many common misconceptions about evolution. For example, many people have grown up being told that the fossil record does not demonstrate an evolutionary pattern, and that there are many missing links. In fact, most of these missing links have been found, and their modern representatives are often still alive today. The biographical entries represent evolutionary scientists within the United States who have had and continue to have a major impact on the broad outline of evolutionary science. The biographies chosen reflect the viewpoints of scientists working within the United States. Five essays that explore interesting questions resulting from studies in evolutionary science are included as well. The appendix consists of a summary of Charles Darwin's *Origin of Species*, which is widely considered to be the foundational work of evolutionary science and one of the most important books in human history. The five essays include: How much do genes control human behavior? What are the ghosts of evolution? Can an evolutionary scientist be religious? Why do humans die? Are humans alone in the universe *White Spaces* lists and places in their historical contexts over 900 texts written by Whites in and about colonial Kenya.

Talking comes naturally...but getting people to listen is an art. This guide provides you with practical, proven strategies for mastering the art of effective, persuasive communication—the skill most essential to your enjoyment of other people and the achievement of personal success.

Sacred, mysterious, powerful, the Blue Nile has carved a deep channel through human history. From its source in the wild Ethiopian highlands, this river passes through some of the most untamed country on Earth as it rushes toward its desert rendezvous with the White Nile in Sudan. More than one adventurer has perished in the Blue Nile Gorge, whose hazards range from raging rapids to menacing crocodiles to armed bandits. When National Geographic invited Virginia Morell to join its 1999 expedition -- which

Download Ebook Ancestral Passions The Leakey Family And The Quest For Humankind's Beginnings A Touchstone Book

hoped to be the first to descend the river in a single, uninterrupted trip from its source to the Sudan border -- she jumped at the chance to revisit Ethiopia, a land she'd come to love during a sojourn many years before. The only African country never colonized by Europeans, its history spans more than two millennia from King Menelik, said in legend to be the son of Solomon and the Queen of Sheba, to Ras Tafari, better known to the West as Haile Selassie, who ruled until his overthrow in 1974. This is an insular culture, isolated by geography and tradition, where ferenjoch visitors are greeted with curiosity and courtesy -- and sometimes suspicion, after three decades of military rule and a long war with Eritrea. Highlighted by Nevada Wier's evocative photographs, Morell's engrossing account introduces a world where tribesmen still hunt leopards with spears, and where villagers sometimes journey for days to catch a glimpse of foreigners and their marvelous boats. We linger at an impromptu concert and feast with people who have never seen a white face before, meet patriarchs whose Christianity stretches back to the Roman Empire, and face off with Kalashnikov-toting militiamen who may not be able to read the documents they demand. By the time we reach the border town of Bumbadi, we've been taken on an unforgettable journey through time -- and among a strong people who've resisted the advances of the modern world.

Looks at the interactions that have occurred between scientists and animal subjects and explains what is being discovered about how and what animals think and feel and the ethical questions that these new findings are raising.

Ancestral Passions The Leakey Family and the Quest for Humankind's Beginnings Simon and Schuster

The renowned anthropologist offers an incisive, inside look at her remarkable family and discusses her work with her husband in East Africa and their discoveries, which forever altered the course of modern anthropology

Drawing from anthropology, physiology, and neurology, and using the examples of jugglers, surgeons, musicians, and puppetmakers, the author explores the role of the hand in how humans learn and form their identities. Reprint. 25,000 first printing.

After World War II, the question of how to define a universal human nature took on new urgency. *Creatures of Cain* charts the rise and precipitous fall in Cold War America of a theory that attributed man's evolutionary success to his unique capacity for murder. Drawing on a wealth of archival materials and in-depth interviews, Erika Lorraine Milam reveals how the scientists who advanced this "killer ape" theory capitalized on an expanding postwar market in intellectual paperbacks and widespread faith in the power of science to solve humanity's problems, even to answer the most fundamental questions of human identity. The killer ape theory spread quickly from colloquial science publications to late-night television, classrooms, political debates, and Hollywood films. Behind the scenes, however, scientists were sharply divided, their disagreements centering squarely on questions of race and gender. Then, in the 1970s, the theory unraveled altogether when primatologists discovered that chimpanzees also kill members of their own species. While the discovery brought an end to definitions of human exceptionalism delineated by violence, Milam shows how some evolutionists began to argue for a shared chimpanzee-human history of aggression even as other scientists discredited such theories as sloppy popularizations. A wide-ranging account of a compelling episode in American science, *Creatures of Cain* argues that the legacy of the killer ape persists today in the conviction that science can resolve the essential dilemmas of human nature.

From St. Augustine and early Ethiopian philosophers to the anti-colonialist movements of Pan-Africanism and Negritude, this encyclopedia offers a comprehensive view of African thought, covering the intellectual tradition both on the continent in its entirety and throughout the African

Diaspora in the Americas and in Europe. The term "African thought" has been interpreted in the broadest sense to embrace all those forms of discourse - philosophy, political thought, religion, literature, important social movements - that contribute to the formulation of a distinctive vision of the world determined by or derived from the African experience. The Encyclopedia is a large-scale work of 350 entries covering major topics involved in the development of African Thought including historical figures and important social movements, producing a collection that is an essential resource for teaching, an invaluable companion to independent research, and a solid guide for further study.

Joe Navarro, a former FBI counterintelligence officer and a recognized expert on nonverbal behavior, explains how to "speed-read" people: decode sentiments and behaviors, avoid hidden pitfalls, and look for deceptive behaviors. You'll also learn how your body language can influence what your boss, family, friends, and strangers think of you. Read this book and send your nonverbal intelligence soaring. You will discover: The ancient survival instincts that drive body language Why the face is the least likely place to gauge a person's true feelings What thumbs, feet, and eyelids reveal about moods and motives The most powerful behaviors that reveal our confidence and true sentiments Simple nonverbals that instantly establish trust Simple nonverbals that instantly communicate authority Filled with examples from Navarro's professional experience, this definitive book offers a powerful new way to navigate your world. Biographical sketches of 100 twentieth-century scientists give information on career highlights, important contributions, key dates, and advice for young people considering careers in science.

This book is the first systematic political history of Jomo Kenyatta, Kenya's founding president. The first of two parts, it explores Kenyatta's formative years in nationalist activism in Kenya and Britain, the complex links between colonial and British intelligence services and Kenyatta's career and the political compromise he forged between Kenya and Britain. This book draws on primary sources to analyze this compromise, which marked his transformation from "leader to darkness and death" to the most beloved post-colonial African leader in the West.

The inspiration for *The Durrells in Corfu*, a Masterpiece production on public television: A naturalist's account of his childhood on the exotic Greek island. When the Durrells could no longer endure the gray English climate, they did what any sensible family would do: sold their house and relocated to the sun-soaked island of Corfu. As they settled into their new home, hilarious mishaps ensued as a ten-year-old Gerald Durrell pursued his interest in natural history and explored the island's fauna. Soon, toads and tortoises, bats and butterflies—as well as scorpions, geckos, ladybugs, praying mantises, octopuses, pigeons, and gulls—became a common sight in the Durrell villa. Uproarious tales of the island's animals and Durrell's fond reflections on his family bring this delightful memoir to life. Capturing the joyous chaos of growing up in an unconventional household, *My Family and Other Animals* will transport you to a place you won't want to leave. This ebook features an illustrated biography of Gerald Durrell including rare photos from the author's estate.

This biography of the "First Family" of anthropology reveals how their discoveries, collaborations, and rivalries contributed to our own knowledge of the origins of humankind. In this fascinating and authoritative work, acclaimed science writer Virginia Morell brings to vivid life the famous and infamous Leakey family, pioneers in the field of paleoanthropology: Louis Leakey, the patriarch, who persisted through initial scientific failures and scandal-ridden divorce to achieve spectacular success in digs throughout East Africa; Mary, his second wife, who worked alongside Louis as they made their outstanding discoveries at Olduvai Gorge and elsewhere; and Richard, their son, who ascended to the top of the field in his parents' wake, only to be threatened with both near-fatal illness and fierce professional rivalry. Morell transports us into the world of these compelling personalities, demonstrating how a small clan

Download Ebook Ancestral Passions The Leakey Family And The Quest For Humankind's Beginnings A Touchstone Book

of highly talented and fiercely competitive people came to dominate an entire field of science and to contribute immeasurably to our understanding of the origins of humanity.

Critically acclaimed author Tom Miller reveals the making and marketing of one Panama hat, from the straw fields of Ecuador's coastal lowland to a hat shop in Southern California. Along the way, the hat becomes a literary device allowing Miller to give us his impressions from the tributaries of the Amazon to the mountainsides of the Andes. The Panama Hat Trail is at once a study in global economics and a lively travelogue.

An intellectual and provocative assessment of recent advances in the war on cancer, prompted by the author's wife's personal battle with the disease, explores current theories about what cancer really is and how it manifests, surprising changes in the scientific community's understandings and the ways that lifestyles and toxins are taking lesser roles. By the award-winning author of *The Ten Most Beautiful Experiments*. This concise and accessible introduction establishes the relevance of cultural anthropology for the modern world through an integrated, ethnographically informed approach. The book develops readers' understanding and engagement by addressing key issues such as: What it means to be human The key characteristics of culture as a concept Relocation and dislocation of peoples The conflict between political, social and ethnic boundaries The concept of economic anthropology Cultural Anthropology: 101 includes case studies from both classic and contemporary ethnography, as well as a comprehensive bibliography and index. It is an essential guide for students approaching this fascinating field for the first time.

Meave Leakey's thrilling, high-stakes memoir--written with her daughter Samira--encapsulates her distinguished life and career on the front lines of the hunt for our human origins, a quest made all the more notable by her stature as a woman in a highly competitive, male-dominated field.

The Animal Intelligence Bundle: "Minds of Their Own" by Virginia Morell (March 2008) "Almost Human" by Mary Roach (April 2008) "The Genius of Swarms" by Peter Miller (July 2007) In "Minds of Their Own," Virginia Morell provides an overview of the science of animal intelligence. She introduces you to an African gray parrot named Alex, a bonobo named Kanzi, and a border collie named Betsy. Each of these animals tells us something interesting about the way they perceive and manipulate their world. The article also looks at what scientists are learning about the intelligence of dolphins and crows, beyond mere communication. In "Almost Human," Mary Roach takes us to the savannahs of Senegal to meet a group of 34 chimpanzees, whose behavior and social structures have given scientists some important clues about the nature of their communication and intelligence. In "The Genius of Swarms," Peter Miller looks at the collective behavior of ants, bees, and other insects for what they can tell us about social organization and how sometimes intelligence lies outside of the individual brain. This article served as the basis for his book, *The Smart Swarm: How Understanding Flocks, Schools, and Colonies Can Make Us Better at Communicating, Decision Making, and Getting Things Done*.

In this engrossing memoir, one of the most controversial, influential, and inspirational figures in African politics today gives the full story of his crusade to save Kenya's natural resources, and specifically the African elephant--a crusade that set him against internal corruption, poverty, and dangerous criminals. Sometimes at the risk of his own

life, Leakey's love of Kenya, and his convictions about the direction his country--and all of sub-Saharan Africa--must take to survive, have been unshakeable. *Wildlife Wars* is the odyssey of an extraordinary man in an extraordinary land.

Detailing the unfolding discovery of a crucial link in our evolution, this book is written in the voice of Walker, whose involvement with Proconsul began when his graduate supervisor analyzed the tree-climbing adaptations in the arm and hand of this extinct creature. Today, Proconsul is the best-known fossil ape in the world.

A biography of three generations of the Leakey family of paleo-anthropologists recounts the personal lives of the Leakeys and describes their discoveries, publications, and impact on our understanding of human origins and evolution.

Mothers and Others finds the key in the primatologically unique length of human childhood. Renowned anthropologist Sarah Hrdy argues that if human babies were to survive in a world of scarce resources, they would need to be cared for, not only by their mothers but also by siblings, aunts, fathers, friends—and, with any luck, grandmothers. Out of this complicated and contingent form of childrearing, Hrdy argues, came the human capacity for understanding others. In essence, mothers and others teach us who will care, and who will not.

This reference book, containing the biographies of more than 1,100 notable British women from Boudicca to Barbara Castle, is an absorbing record of female achievement spanning some 2,000 years of British life. Most of the lives included are those of women whose work took them in some way before the public and who therefore played a direct and important role in broadening the horizons of women. Also included are women who influenced events in a more indirect way: the wives of kings and politicians, mistresses, ladies in waiting and society hostesses. Originally published as *The Europa Biographical Dictionary of British Women*, this newly re-worked edition includes key figures who have died in the last 20 years, such as The Queen Mother, Baroness Ryder of Warsaw, Elizabeth Jennings and Christina Foyle.

Gentle counsel and realistic advice for families contending with one of today's most misunderstood forms of mental illness. "Randi Kreger has done it again! With her new book, she continues to make the dynamics of Borderline Personality Disorder (BPD) readily accessible to those of us who love, live with and treat people who suffer from this complex condition." Blaise Aguirre, MD, Medical Director, Adolescent Dialectical Behavior Therapy Residential Program, McLean Hospital "Kreger's communication techniques, grounded in the latest research, provide family members with the essential ability to regain a genuine, meaningful relationship with their loved one with Borderline Personality Disorder." Debra Resnick, Psy.D., President, Psychological Services and Human Development Center "This book offers hope for those who think their situation has none." Rachel Reiland, author of *Get Me Out of Here: My Recovery from Borderline Personality Disorder* For family members of people with Borderline Personality Disorder (BPD), home life is routinely unpredictable and frequently unbearable. Extreme mood swings, impulsive behaviors, unfair blaming and

criticism, and suicidal tendencies common conduct among those who suffer from the disorder leave family members feeling confused, hurt, and helpless. In *Stop Walking on Eggshells*, Randi Kreger's pioneering first book which sold more than 340,000 copies, she and co-author Paul T. Mason outlined the fundamental differences in the way that people with BPD relate to the world. Now, with *The Essential Family Guide to Borderline Personality Disorder*, Kreger takes readers to the next level by offering them five straightforward tools to organize their thinking, learn specific skills, and focus on what they need to do to get off the emotional rollercoaster: Take care of yourself, Uncover what keeps you feeling stuck, Communicate to be heard, Set limits with love, Reinforce the right behaviors. Together the steps provide a clear-cut system designed to help friends and family reduce stress, improve their relationship with their borderline loved one, improve their problem-solving skills and minimize conflict, and feel more self-assured about setting limits. Randi Kreger is the co-author of *Stop Walking on Eggshells* and the author of *The Stop Walking on Eggshells Workbook*. She operates bpdcentral.com, one of the top web-based resources for those living with BPD, and runs the Welcome to Oz online family support groups based at her web site. Co-founder of the Personality Disorder Awareness Network, Kreger is frequently invited to lecture on BPD and related issues, both for clinicians and laypeople.

How modern philosophers use and perpetuate myths about prehistory
The state of nature, the origin of property, the origin of government, the primordial nature of inequality and war why do political philosophers talk so much about the Stone Age? And are they talking about a Stone Age that really happened, or is it just a convenient thought experiment to illustrate their points?
Karl Widerquist and Grant S. McCall take a philosophical look at the origin of civilisation, examining political theories to show how claims about prehistory are used. Drawing on the best available evidence from archaeology and anthropology, they show that much of what we think we know about human origins comes from philosophers' imagination, not scientific investigation.
Key Features
Shows how modern political theories employ ambiguous factual claims about prehistory
Brings archaeological and anthropological evidence to bear on those claims
Tells the story of human origins in a way that reveals many commonly held misconceptions
Johanson, the discoverer, in 1974, of "Lucy"--the oldest skeleton of an erect-walking human yet found--reports the story of his internationally acclaimed find
The study of human evolution is advancing rapidly. Newly discovered fossil evidence is adding ever more pieces to the puzzle of our past, whilst revolutionary technological advances in the study of ancient DNA are completely reshaping theories of early human populations and migrations. In this Very Short Introduction Bernard Wood traces the history of paleoanthropology from its beginnings in the eighteenth century to the very latest fossil finds. In this new edition he discusses how Ancient DNA studies have revolutionized how we view the recent (post-550 ka) human evolution, and the process of speciation. The

combination of ancient and modern human DNA has contributed to discoveries of new taxa, as well as the suggestion of 'ghost' taxa whose fossil records still remain to be discovered. Considering the contributions of related sciences such as paleoclimatology, geochronology, systematics, genetics, and developmental biology, Wood explores our latest understandings of our own evolution. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

Reassesses human prehistory, incorporating ideas from philosophy, anthropology, molecular biology, and linguistics to explore how humans acquired the qualities of consciousness and humanity.

Down from the Trees: Man's Amazing Transition from Tree-Dwelling Ape Ancestors covers the evolution of man from tree-dwelling ape to Homo sapiens as he is today. Using easy-to-read language, the author takes complex, jargon-filled material and extracts the essence of the topic and conveys it in a clear and engaging manner. He approaches the subject of human evolution from three different disciplines: fossil evidence and its interpretation, evolutionary theory and its applicability, and genetic evidence and its ability to unlock prehistoric information. The third discipline has advanced unbelievably in the last few years, and this book includes the most up-to-date research. There is nothing more interesting to humans than the story of their origins. The evolutionary process of a tree-dwelling ape becoming a walking, talking man who has developed the technology to walk on the moon, transplant hearts, or modify living things is no trivial story. This book provides a fascinating and comprehensive view of what science has learned of human evolution.

Collects 1,000 entries on the subfields on anthropology, including physical anthropology, archaeology, paleontology, linguistics, and evolution.

Man the Hunted argues that primates, including the earliest members of the human family, have evolved as the prey of any number of predators, including wild cats and dogs, hyenas, snakes, crocodiles, and even birds. The authors' studies of predators on monkeys and apes are supplemented here with the observations of naturalists in the field and revealing interpretations of the fossil record. Eyewitness accounts of the 'man the hunted' drama being played out even now give vivid evidence of its prehistoric significance. This provocative view of human evolution suggests that countless adaptations that have allowed our species to survive (from larger brains to speech), stem from a considerably more vulnerable position on the food chain than we might like to imagine. The myth of early humans as fearless hunters dominating the earth obscures our origins as just one of many species that had to be cautious, depend on other group members, communicate danger, and come to terms with being merely one cog in the complex cycle of life.

Henry Muoria (1914-97), self-taught journalist and pamphleteer, helped to inspire Kenya's nationalisms before Mau Mau. The pamphlets reproduced here, in Gikuyu and English, contrast his own originality with the conservatism of Jomo Kenyatta, Kenya's first President. The contributing editors introduce Muoria's political context, tell how three remarkable women sustained his families' life; and remember him as father. Courageous intellectual, political, and domestic life here intertwine.

Designed to meet the curriculum needs of students from grades 7-12, this five-volume encyclopedia explores the history and civilizations of the ancient world from prehistory to approximately 1000 CE. Organized alphabetically within geographical volumes on Africa, Europe, the Americas, Southwest Asia, and Asia and the Pacific, entries cover the social, political, scientific and technological, economic, and cultural events and developments that shaped the ancient world in all areas of the globe. Each volume explores significant civilizations, personalities, cultural and social developments, and scientific achievements in its geographical area. Boxed features include Link in Time, Link in Place, Ancient Weapons, Turning Points, and Great Lives. Each volume also includes maps, timelines and illustrations; and a glossary, bibliography and indexes complete the set.

The Orce Man: Controversy, Media and Politics in Human Origins Research is a detailed account of a long controversy that shows the role of newspapers, politicians and scientists in how a scientific claim is believed in the late 20th century.

Chronicles a journey by foot across East Africa, and depicts the vanishing animals of a rapidly vanishing world.

A fascinating guide to a career in marine biology written by bestselling journalist Virginia Morell and based on the real-life experiences of an expert in the field—essential reading for someone considering a path to this profession. For the last two decades, Dr. Robin Baird has spent two months out of each year aboard a twenty-four-foot Zodiac boat in the waters off the big island of Hawai'i, researching the twenty-five species of whales and dolphins that live in the Pacific Ocean. His life may seem an impossible dream—but his career path from being the first person in his family to graduate college to becoming the leading expert on some of Hawai'i's marine mammals was full of twists and turns. Join Baird aboard his Zodiac for a candid look at the realities of life as a research scientist, from the ever-present struggles to secure grants and publish new data, to the joys of helping to protect the ocean and its inhabitants. You'll also learn pro tips, like the unexpected upsides to not majoring in marine biology and the usefulness of hobbies like sailing, birdwatching, photography, and archery. (You'll need good aim to tag animals with the tiny recording devices that track their movements.) *Becoming a Marine Biologist* is an essential guide for anyone looking to turn a passion for the natural world into a career. This is the most valuable informational interview you'll have—required reading for anyone

considering this challenging yet rewarding path.

The riveting true story of decadence, deception, and murder among British aristocrats in colonial Kenya. In 1941, with London burning in the Blitz, a group of hedonistic English nobles partied shamelessly in Kenya. Far removed from falling bombs, the wealthy elites of "Happy Valley" indulged in morphine, alcohol, and unrestricted sex, often with their friends' spouses. But the party turned sinister in the early hours of a January morning for Josslyn Hay, Lord Erroll, who had been enjoying the favors of the beautiful young wife of a middle-aged neighbor. Hay was found dead, a bullet in his brain. The murder shocked the close-knit community of wealthy expatriates in Nairobi and shined a harsh light on their louche lifestyle. Three decades later, author James Fox researched the slaying of Lord Erroll, an unsolved crime still sheathed in a thick cloud of rumor and innuendo. What he discovered was both unsettling and luridly compelling. *White Mischief* is a spellbinding true-crime classic, a tale of privileged excess and the wages of sin, and an account of one writer's determined effort to crack a cold and craven killing.
