The purpose of this workbook is to provide students with practice in analyzing second language data. For the student of second language learning, "hands-on" experience with actual data is essential in understanding the processes involved in learning a second language. Working through exemplars of the kinds of interlanguages that learners do and do not create brings about a clearer understanding of the principles underlying these interlanguages, as well as the universal principles of language learning (those that are independent of particular languages and interlanguages). The goal in this workbook is to present data organized in such a way that by working through pedagogically presented data-sets, students are led to a discovery and understanding of theoretical and/or methodological issues. In addition, they acquire the ability to interpret data and to begin to draw conclusions from them. The authors intend that students should go from the data to a conclusion that includes a 3-part statement: \*what else you should want to know about these data; \*why this, specifically, and not something else; and \*how one can empirically research what you want to find out. This sequence of questions forces students to constantly keep in mind the important question of falsification: What kind of data would it take to falsify the particular

conclusions the students come to? As with the earlier edition of this workbook (Sorace, Gass, & Selinker), two audiocassettes provide language samples for use in the exercises. These cassettes and the teacher's manual are offered free of charge on adoption of the workbook for classroom use; a three-part set (workbook/manual/tapes) is also available.

The architecture of the human language faculty has been one of the main foci of the linguistic research of the last half century. This branch of linguistics, broadly known as Generative Grammar, is concerned with the formulation of explanatory formal accounts of linguistic phenomena with the ulterior goal of gaining insight into the properties of the 'language organ'. The series comprises high quality monographs and collected volumes that address such issues. The topics in this series range from phonology to semantics, from syntax to information structure, from mathematical linguistics to studies of the lexicon.

Most of the papers presented at the 1990 West Coast Conference on Formal Linguistics are included in this volume. This annual publication, not readily available in the past, makes the latest research in formal linguistics available to a wider audience. Aaron Halpern is a graduate student in linguistics at Stanford University.

In the course of our everyday lives, we generally take our knowledge of language for granted. Occasionally, we may become aware of its great practical importance, but we rarely pay any attention to the formal properties that language has. Yet these properties are remarkably complex. So complex that the question immediately arises as to how we could know so much. The facts that will be considered in this book should serve well to illustrate this point. We will see for example that verbs like *arrivare* 'arrive' and others like *telefonare* 'telephone', which are superficially similar, actually differ in a large number of respects, some fairly well known, others not. Why should there be such differences. we may ask. And why should it be that if a verb behaves like *arrivare* and unlike *telefonare* in one respect. it will do so in all others consistently, and how could everyone know it? To take another case, Italian has two series of pronouns: stressed and unstressed. Thus, for example, alongside of reflexive *se stesso* 'himself' which is the stressed form. one finds *si* which is unstressed but otherwise

synonymous. Yet we will see that the differences between the two could not simply be stress versus lack of stress, as their behavior is radically different under a variety of syntactic conditions.

A vivid recreation of how the governors and governed of early seventeenth-century Florence confronted, suffered, and survived a major epidemic of plague. Plague remains the paradigm against which reactions to many epidemics are often judged. Here, John Henderson examines how a major city fought, suffered, and survived the impact of plague. Going beyond traditional oppositions between rich and poor, this book provides a nuanced and more compassionate interpretation of government policies in practice, by recreating the very human reactions and survival strategies of families and individuals. From the evocation of the overcrowded conditions in isolation hospitals to the splendor of religious processions, Henderson analyzes Florentine reactions within a wider European context to assess the effect of state policies on the city, street, and family. Writing in a vivid and approachable way, this book unearths the forgotten stories of doctors and administrators struggling to cope with the sick and dying, and of those who were left bereft and confused by the sudden loss of relatives.

This volume offers novel insights into linguistic diversity in the domains of spatial and temporal reference, searching for uniformity amongst diversity. A number of authors discuss expression of dynamic spatial relations cross-linguistically in a vast range of typologically different languages such as Bezhta, French, Hinuq, Italian, Japanese, Polish, Serbian, and Spanish, among others. The contributions on linguistic expression of time all shed new light on pertinent questions regarding this cognitive domain, such as the hotly debated relationship between cross-linguistic differences in talking about time and universal principles of utterance interpretation, modelling temporal inference through aspectual interactions, as well as the complexity of the acquisition of tense-aspect relations in a second language. The topic of space and time in language and culture is also represented, from a different point of view, in the sister volume *Space and Time in Languages and Cultures: Language, culture, and cognition* (HCP 37) which discusses spatial and temporal constructs in human language, cognition, and culture in order to come closer to a better understanding of the interaction between shared and individual characteristics of language and culture that shape the way people interact

with each other and exchange information about the spatio-temporal constructs that underlie their cognitive, social, and linguistic foundations.

Lady Mary Wortley Montagu (1689-1762) is one of the most important women writers between Aphra Behn and Jane Austen, and one of her period's most provocative and entertaining writers of either sex. The narratives in this volume, with the exception of one juvenile piece, have never been printed before. They show the author experimenting with the genres of fiction and autobiography, more influenced by French models than by English, but always working experimentally against the grain of her various traditions. Besides page-turning narrative, these works offer the rare opportunity of a completely fresh take on literary movements, cross-cultural relations, gender ideologies, and other literary debates of the early eighteenth century. Our existing picture of what was once possible in literature and what was possible for women at this time cannot remain unchanged once these writings appear.

This Italian textbook is divided into two parts. The first consists of texts and dialogues, which help the reader to have fun while learning Italian. Students of the latter level can use the first two parts of the book to revise what they have studied in the past and the third part to improve their vocabulary and their reading skills.
