One of the most extraordinary books ever written about chess and chessplayers, this authoritative study goes well beyond a lucid explanation of how today's chessmasters and tournament players are rated. Twenty years' research and practice produce a wealth of thought-provoking and hitherto unpublished material on the nature and development of high-level talent: Just what constitutes an "exceptional performance" at the chessboard? Can you really profit from chess lessons? What is the lifetime pattern of Grandmaster development? Where are the masters born? Does your child have master potential? The step-by-step rating system exposition should enable any reader to become an expert on it. For some it may suggest fresh approaches to performance measurement and handicapping in bowling, bridge, golf and elsewhere. 43 charts, diagrams and maps supplement the text. How and why are chessmasters statistically remarkable? How much will your rating rise if you work with the devotion of a Steinitz? At what age should study begin? What toll does age take, and when does it begin? Development of the performance data, covering hundreds of years and thousands of players, has revealed a fresh and exciting version of chess history. One of the many tables identifies 500 all-time chess great personal data and top lifetime performance ratings. Just what does government assistance do for chess? What is the Soviet secret? What can we learn from the Icelanders? Why did the small city of Plovdiv

produce three Grandmasters in only ten years? Who are the untitled dead? Did Euwe take the championship from Alekhine on a fluke? How would Fischer fare against Morphy in a ten-wins match? It was inevitable that this fascinating story be written, ' asserts FIDE President Max Euwe, who introduces the book and recognizes the major part played by ratings in today's burgeoning international activity. Although this is the definitive ratings work, with statistics alone sufficient to place it in every reference library, it was written by a gentle scientist for pleasurable reading -for the enjoyment of the truths, the questions, and the opportunities it reveals.

The second edition of MECHANICS OF MATERIALS by Pytel and Kiusalaas is a concise examination of the fundamentals of Mechanics of Materials. The book maintains the hallmark organization of the previous edition as well as the time-tested problem solving methodology, which incorporates outlines of procedures and numerous sample problems to help ease students through the transition from theory to problem analysis. Emphasis is placed on giving students the introduction to the field that they need along with the problem-solving skills that will help them in their subsequent studies. This is demonstrated in the text by the presentation of fundamental principles before the introduction of

advanced/special topics. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

When Michael Robinson receives an invitation to his high school Reunion, he's certain that it's really a personal message from an otherworldly creature he encountered as a boy, one that killed his father and his best friend. Believing that this mysterious monster has finally tracked him down, Michael knows he must return to his birthplace in Templeton to face the being or it will never let him have peace. This same entity has been quietly killing off locals for years. Deputy Chief of Police Andrew Scott knows something strange is happening, but no one other than himself can see the glowing trails of slime left by the monster. It isn't until he arrests a boyhood friend named Jack for murder that Andrew begins to realize he hasn't been imagining things. Jack claims a monster killed his parents, and then reveals that someone else knows all about it: Michael Robinson. With the Reunion fast approaching, Andrew knows he must reconnect with his old friend, Michael, and find out more about the creature. Andrew isn't the only one waiting for Michael's return. Jenny Cranston is a physically deformed woman who lives in a dream world dominated by her talking cat. The feline has convinced her that Michael is the man of her dreams, so she too anxiously awaits his return.

However, Jenny may prove to be the least of Michael's worries. Shades of Stephen King! About the Author: Jason Pytel's preferred reading is dark fiction.

Offering a solid introduction to the entire modeling process, A FIRST COURSE IN MATHEMATICAL MODELING, 4th Edition delivers an excellent balance of theory and practice, giving students hands-on experience developing and sharpening their skills in the modeling process. Throughout the book, students practice key facets of modeling, including creative and empirical model construction, model analysis, and model research. The authors apply a proven six-step problem-solving process to enhance students' problem-solving capabilities -- whatever their level. Rather than simply emphasizing the calculation step, the authors first ensure that students learn how to identify problems, construct or select models, and figure out what data needs to be collected. By involving students in the mathematical process as early as possible -- beginning with short projects -- the book facilitates their progressive development and confidence in mathematics and modeling.
