A study of the organisation of the salt industry of the Sokoto Caliphate and Borno.

Being Political presents a powerful critique of universalistic and orientalist interpretations of the origins of citizenship and a persuasive alternative history of the present struggles over citizenship. This book uncovers an underlying dispute over the role images play in contemporary society and, consequently, over their values and purposes. Two decades after the concepts of the pictorial and the iconic turn changed our vernacular involvement with regard to images, it has become clear that it was not only a newly discovered social, political or sexual construction of the visual field that brought turbulence into disciplinary knowledge, but that images have their own “pictorial logic” with powers exceeding those that are purely iconic or visually discernible. Instead of underscoring previously defined concepts of the picture, the contributors to this book view visual studies and Bildwissenschaft “merely” as a place for the theory of images, making a case for the hotly-debated topic of their powers and weaknesses on the one hand, and of their respective theories on the other. Therefore, as the

title indicates, this book theorizes images, but it does not present a theory of images, because visual studies cannot lead to a unified theory of images unless a unified ontology of images can be agreed upon first. Although that would be a different task altogether, all the contributions in this book (in different ways and at different paces), by theorizing images in their aesthetic, historical, media and technological guises, pave the way for the future of visual culture and for the image science that will make this future more comprehensible.

Richard Rorty is one of the most influential, controversial and widely-read philosophers of the twentieth century. In this GuideBook to Philosophy and the Mirror of Nature Tartaglia analyzes this challenging text and introduces and assesses:

Rorty and the Mirror of Nature is an ideal starting-point for anyone new to Rorty, and essential reading for students in philosophy, cultural studies, literary theory and social science.

From the critically acclaimed author of the New York Times bestseller *The Confessions of Max Tivoli* comes *The Impossible Lives of Greta Wells*, a rapturously romantic story of a woman who finds herself transported to the “other lives” she might have lived. After the death of her beloved twin brother and the abandonment of her long-time lover, Greta Wells undergoes electroshock therapy. Over the course of the treatment, Greta finds herself repeatedly sent to 1918, 1941, and back to the present. Whisked from the gas-lit streets and horse-drawn carriages of the West Village to a martini-fueled lunch at the Oak Room, in these other worlds, Greta finds her brother alive and well—though fearfully masking his true personality. And her former lover is now her devoted husband...but will he be unfaithful to her in this life as well? Greta Wells is fascinated by her alter egos: in 1941, she is a devoted mother; in 1918, she is a bohemian adulteress. In this spellbinding novel by Andrew Sean Greer, each reality has its own losses, its own rewards; each extracts a different price. Which life will she choose as she wrestles with the unpredictability of love and the consequences of even her most carefully considered choices? Predicated on the notion that mathematics has been a growing source of aesthetic inspiration in culture, this volume celebrates where the two intermesh. It is

a meditation on the performances and cultural events, all mathematics-related, performed in Bologna in 2004, is dedicated to all those who are curious about mathematics, but also more generally about theatre, cinema, literature, arts and science. Thanks to the DVD, one can readers can relive various events through the voices and the images of the participants.

December 17, 2010 - January 14, 2011. These dates have been fixed as the beginning and completion of a revolution which took the world by surprise, opening up a sudden and peculiar spatial upheaval. Mohamed Bouazizi's gesture, setting himself on fire, was an extreme one. Immediately following this act, squares and streets started to fill up, from Tunisia to Tahrir square, to Sana'a, to Tripoli and to Damascus. The revolutions that originated were revolutions against political dictatorships and against dictatorship over people's lives, against the way poverty was rendered invisible and against unbearable existences. These revolutionary struggles staged an unprecedented capacity for common action based on a logic of 'spatial takeover.' These existences decided to stand up and be counted, taking over streets, squares, Kasbas, medinas, taking up their freedom, the freedom to be, to go, to be noticed at last. They did so forming an uncontainable movement, from Tunis to Cairo, from Maghreb to Mashreq. From Tunisia to Europe.

These 'Arab Revolutions' and, the one that sparked in Tunisia in particular, have not followed just one direction in their 'spatial takeover.' They have also managed to fill a series of European spaces with existences and bodies: streets, islands, stations, parks; from Lampedusa to Paris, crossing the sea in an unexpected and sudden capacity to unify two shores and two continents, hence erasing centuries of history, acting on and performing the 'natural' proximity of these shores. Spaces in Migration: Postcards of a Revolution attempts to rearticulate some of the images of what happened starting from December 17, 2010, sketching a necessarily fragmented story, a series of postcards, and piecing together fragments of before- and after- moments, following the spaces in migration of this revolution. 'Spaces in Migration is a compelling read, which brings together a plethora of voices while making a decisive intervention in debates about migration in the wake of the Tunisian revolution. Voices that sorely need to be heard find space in this book. Deftly combining analysis with rich empirical detail, the authors succeed in highlighting critical dimensions of the revolution as well as key problems of contemporary migration and humanitarian regimes.' - Vicki Squire, Associate Professor of International Security, University of Warwick, UK 'Spaces in Migration is an intellectual eruption - the eruption of the Arab Spring, and the Tunisian

Revolution in particular, into the critical study of migration and borders. Combining the very nuanced analyses of the Italian scholar-activist contributors with the transcripts of their interviews with Tunisian migrants and their families, and also with refugees from various African countries encamped in the borderzone between Libya and Tunisia, this book provides a poignant exploration of how the autonomous subjectivity of migrants can radically destabilize the logics of border control.' - Nicholas De Genova, co-editor of *The Deportation Regime: Sovereignty, Space, and the Freedom of Movement* (Duke University Press, 2010)

According to common perception, the Federal Republic of Germany supported the formation of the Israeli state for moral reasons—to atone for its Nazi past—but did not play a significant role in the Arab–Israeli conflict. However, the historical record does not sustain this narrative. Daniel Marwecki’s pathbreaking analysis deconstructs the myths surrounding the odd alliance between Israel and post-war democratic Germany. Thorough archival research shows how German policymakers often had disingenuous, cynical or even partly antisemitic motivations, seeking to whitewash their Nazi past by supporting the new Israeli state. This is the true context of West Germany’s crucial backing of Israel in the 1950s and ’60s. German economic and military support greatly contributed to Israel’s early consolidation and eventual regional hegemony. This initial alliance has affected Germany’s role in the Israeli–Palestinian conflict to the present day. Marwecki reassesses German foreign policymaking and identity-shaping, and raises difficult

questions about German responsibility after the Holocaust, exploring the many ways in which the genocide of European Jews and the dispossession of the Palestinians have become tragically intertwined in the Middle East's international politics. This long overdue investigation sheds new light on a major episode in the history of the modern Middle East.

—Wall Street Journal “Leavy has hit it out of the park...A lot more than a biography. It’s a consideration of how we create our heroes, and how this hero’s self perception distinguishes him from nearly every other great athlete in living memory... a remarkably rich portrait.” — Time The instant New York Times bestseller about the baseball legend and famously reclusive Dodgers’ pitcher Sandy Koufax, from award-winning former Washington Post sportswriter Jane Leavy. Sandy Koufax reveals, for the first time, what drove the three-time Cy Young award winner to the pinnacle of baseball and then—just as quickly—into self-imposed exile.

In *Rickey & Robinson*, legendary sportswriter Roger Kahn reveals the true, unsanitized account of the integration of baseball--a story that for decades has relied largely on inaccurate, secondhand reports. Focusing on Branch Rickey and Jackie Robinson, Kahn's account is based on exclusive reporting and his personal reminiscences, including revelatory material he buried in his notebooks in the '40s and '50s. Rickey and Robinson were chiefly responsible for making integration happen. Through in-depth examinations of both men, Kahn separates fact from myth to present a truthful portrait of baseball and its participants at a critical juncture in American history.

In this convincing and provocative study, Rebecca Suter aims to complicate our understanding of world literature by examining the creative and critical deployment of cultural stereotypes in the early novels of Kazuo Ishiguro. “World literature” has come under increasing scrutiny in recent years: Aamir Mufti called it the result of “one-world thinking,” the legacy of an imperial system of cultural mapping from a unified perspective. Suter views Ishiguro’s fiction as an important alternative to this paradigm. Born in Japan, raised in the United Kingdom, and translated into a broad range of languages, Ishiguro has throughout his career consciously

used his multiple cultural positioning to produce texts that look at broad human concerns in a significantly different way. Through a close reading of his early narrative strategies, Suter explains how Ishiguro has been able to create a “two-world literature” that addresses universal human concerns and avoids the pitfalls of the single, Western-centric perspective of “one-world vision.” Setting his first two novels, *A Pale View of Hills* (1982) and *An Artist of the Floating World* (1986), in a Japan explicitly used as a metaphor enabled Ishiguro to parody and subvert Western stereotypes about Japan, and by extension challenge the universality of Western values. This subversion was amplified in his third novel, *The Remains of the Day* (1989), which is perfectly legible through both English and Japanese cultural paradigms. Building on this subversion of stereotypes, Ishiguro’s early work investigates the complex relationship between social conditioning and agency, showing how characters’ behavior is related to their cultural heritage but cannot be reduced to it. This approach lies at the core of the author’s compelling portrayal of human experience in more recent works, such as *Never Let Me Go* (2005) and *The Buried Giant* (2015), which earned Ishiguro a global audience and a Nobel Prize. Deprived of the easy explanations of one-world thinking, readers of Ishiguro’s two-world literature are forced to appreciate the complexity of the interrelation of individual and collective identity, personal and historical memory, and influence and agency to gain a more nuanced, “two-world appreciation” of human experience.

*Women’s Manga in Asia and Beyond* offers a variety of perspectives on women’s manga and the nature, scope, and significance of the relationship between women and comics/manga, both globally as well as locally. Based on the activities since 2009 of the Women’s MANGA Research Project in Asia (WMRPA), the edited volume elucidates social

and historical aspects of the Asian wave of manga from ever-broader perspectives of transnationalization and glocalization. With a specific focus on women's direct roles in manga creation, it illustrates how the globalization of manga has united different cultures and identities, focusing on networks of women creators and readerships. Taking an Asian regional approach combined with investigations of non-Asian cultures which have felt manga's impact, the book details manga's shift to a global medium, developing, uniting, and involving increasing numbers of participants worldwide. Unveiling diverse Asian identities and showing ways to unite them, the contributors to this volume recognize the overlaps and unique trends that emerge as a result.

This book is the result of a research project carried out by the research group GRETEL from the Universitat Autònoma de Barcelona (UAB) on children's and adolescents' digital literary education. It offers some of the outcomes of this project and combines them with other contributions from internationally renowned authors to address the three pillars of digital literary reader training: the texts themselves, the responses they generate in children and adolescents and digital reading practices at home and at school. This work is intended as a contribution to international research on digital literature for children and young adults and its impact on the teaching practices of literary education. Its main goals are to guide the inclusion of this training in

classrooms and to investigate strategies for accessing multimedia, interactive and hypertextual messages and products that form a part of fictional products today. The volume begins by contextualising electronic literary reading and specifying the new research framework of digital literature for children and adolescents. It then provides an overview of the relationships between the electronic medium and children and young adult production on the one hand, and of the digital works and their features on the other, to reflect on their potential for literary education. Subsequently, it tackles the effective contact of children and adolescents with this literature in order to determine what happens when different electronic works are made available to children readers without eliminating printed literature from their environment. Finally, the floor is given to two leading creators.

In reconstructing the birth and development of the notion of 'unconscious', historians of ideas have heavily relied on the Freudian concept of *Unbewussten*, retroactively projecting the psychoanalytic unconscious over a constellation of diverse cultural experiences taking place in the eighteenth and nineteenth centuries between France and Germany. *Archaeology of the Unconscious*

aims to challenge this perspective by adopting an unusual and thought-provoking viewpoint as the one offered by the Italian case from the 1770s to the immediate aftermath of WWI, when Italo Svevo's *La coscienza di Zeno* provides Italy with the first example of a 'psychoanalytic novel'. Italy's vibrant culture of the long nineteenth century, characterised by the sedimentation, circulation, intersection, and synergy of different cultural, philosophical, and literary traditions, proves itself to be a privileged object of inquiry for an archaeological study of the unconscious; a study whose object is not the alleged 'origin' of a pre-made theoretical construct, but rather the stratifications by which that specific construct was assembled. In line with Michel Foucault's *Archéologie du savoir* (1969), this volume will analyze the formation and the circulation, across different authors and texts, of a network of ideas and discourses on interconnected themes, including dreams, memory, recollection, desire, imagination, fantasy, madness, creativity, inspiration, magnetism, and somnambulism. Alongside questioning pre-given narratives of the 'history of the unconscious', this book will employ the Italian 'difference' as a powerful perspective from whence to address the undeveloped potentialities of the pre-Freudian unconscious, beyond uniquely psychoanalytical viewpoints.

The name Giuseppe Verdi conjures images of Italians singing opera in the streets and bursting into song at political protests or when facing the firing squad. While many of the accompanying stories were exaggerated, or even invented, by later generations, Verdi's operas—along with those by Rossini, Donizetti, and Mercadante—did inspire Italians to imagine Italy as an independent and unified nation. Capturing what it was like to attend the opera or to join in the music at an aristocratic salon, *Waiting for Verdi* shows that the moral dilemmas, emotional reactions, and journalistic polemics sparked by these performances set new horizons for what Italians could think, feel, say, and write. Among the lessons taught by this music were that rules enforced by artistic tradition could be broken, that opera could jolt spectators into intense feeling even as it educated them,

and that Italy could be in the vanguard of stylistic and technical innovation rather than clinging to the glories of centuries past. More practically, theatrical performances showed audiences that political change really was possible, making the newly engaged spectator in the opera house into an actor on the political stage.

Can a renowned mathematician successfully outwit the stock market? Not when his biggest investment is WorldCom. In *A Mathematician Plays the Stock Market*, best-selling author John Allen Paulos employs his trademark stories, vignettes, paradoxes, and puzzles to address every thinking reader's curiosity about the market -- Is it efficient? Is it random? Is there anything to technical analysis, fundamental analysis, and other supposedly time-tested methods of picking stocks? How can one quantify risk? What are the most common scams? Are there any approaches to investing that truly outperform the major indexes? But Paulos's tour through the irrational exuberance of market mathematics doesn't end there. An unrequited (and financially disastrous) love

affair with WorldCom leads Paulos to question some cherished ideas of personal finance. He explains why "data mining" is a self-fulfilling belief, why "momentum investing" is nothing more than herd behavior with a lot of mathematical jargon added, why the ever-popular Elliot Wave Theory cannot be correct, and why you should take Warren Buffet's "fundamental analysis" with a grain of salt. Like Burton Malkiel's *A Random Walk Down Wall Street*, this clever and illuminating book is for anyone, investor or not, who follows the markets -- or knows someone who does.

From the visionary bestselling author of *The Second World* and *How to Run the World* comes a bracing and authoritative guide to a future shaped less by national borders than by global supply chains, a world in which the most connected powers—and people—will win. Connectivity is the most revolutionary force of the twenty-first century. Mankind is reengineering the planet, investing up to ten trillion dollars per year in

transportation, energy, and communications infrastructure linking the world's burgeoning megacities together. This has profound consequences for geopolitics, economics, demographics, the environment, and social identity. Connectivity, not geography, is our destiny. In *Connectography*, visionary strategist Parag Mehta travels from Ukraine to Iran, Mongolia to North Korea, Pakistan to Nigeria, and across the Arctic Circle and the South China Sea to explain the rapid and unprecedented changes affecting every part of the planet. He shows how militaries are deployed to protect supply chains as much as borders, and how nations are less at war over territory than engaged in tugs-of-war over pipelines, railways, shipping lanes, and Internet cables. The new arms race is to connect to the most markets—a race China is now winning, having launched a wave of infrastructure investments to unite Eurasia around its new Silk Roads. The United States can only regain ground by fusing with its neighbors into a super-continental North American Union of shared resources and prosperity. *Connectography* offers a unique and hopeful vision for the future. Mehta argues that new energy discoveries and technologies have eliminated the need for resource wars; ambitious transport corridors and power grids are unscrambling Africa's fraught colonial borders; even the Arab world is evolving a more peaceful map as it builds resource and trade routes across its war-torn landscape. At the same time, thriving hubs such as Singapore and Dubai are injecting dynamism into young and heavily populated regions, cyber-communities empower commerce across vast

It is the summer of 1940, and Lisbon, Portugal, is the only neutral port left in Europe—a city filled with spies, crowned heads, and refugees of every nationality, tipping

back absinthe to while away the time until their escape. Awaiting safe passage to New York on the SS Manhattan, two couples meet: Pete and Julia Winters, expatriate Americans fleeing their sedate life in Paris; and Edward and Iris Freleng, sophisticated, independently wealthy, bohemian, and beset by the social and sexual anxieties of their class. As Portugal's neutrality, and the world's future, hang in the balance, the hidden threads in the lives of these four characters—Julia's status as a Jew, Pete and Edward's improbable affair, Iris's increasingly desperate efforts to save her tenuous marriage—begin to come loose. Gorgeously written, sexually and politically charged, David Leavitt's long-awaited new novel is an extraordinary work.

"Eugenio Montale (1896-1981) is best known for the intense lyrical vision of his first three collections of poetry, written between the 1920s and early 1950s. With the publication of ""Satura"" in 1971, the profile of his work changes irrevocably as a new disillusioned voice emerged, commenting ironically on post-war Italian society and debunking his own previous poetic myths. O'Ceallachin, while placing this body of work firmly in its historical and ideological context, explores the poetic texts in detail, approaching the work from a variety of interpretative and thematic angles, and constructing a comprehensive reading of Montale's later work." Anthropoc Bias explores how to reason when you suspect that your evidence is biased by "observation selection effects"--that is, evidence that has been

filtered by the precondition that there be some suitably positioned observer to "have" the evidence. This conundrum--sometimes alluded to as "the anthropic principle," "self-locating belief," or "indexical information"--turns out to be a surprisingly perplexing and intellectually stimulating challenge, one abounding with important implications for many areas in science and philosophy. There are the philosophical thought experiments and paradoxes: the Doomsday Argument; Sleeping Beauty; the Presumptuous Philosopher; Adam & Eve; the Absent-Minded Driver; the Shooting Room. And there are the applications in contemporary science: cosmology ("How many universes are there?", "Why does the universe appear fine-tuned for life?"); evolutionary theory ("How improbable was the evolution of intelligent life on our planet?"); the problem of time's arrow ("Can it be given a thermodynamic explanation?"); quantum physics ("How can the many-worlds theory be tested?"); game-theory problems with imperfect recall ("How to model them?"); even traffic analysis ("Why is the 'next lane' faster?"). Anthropic Bias argues that the same principles are at work across all these domains. And it offers a synthesis: a mathematically explicit theory of observation selection effects that attempts to meet scientific needs while steering clear of philosophical paradox.

He was not much of a player and not much more of

a manager, but by the time Branch Rickey (1881-1965) finished with baseball, he had revolutionized the sport not just once but three times. In this definitive biography of Rickey the man sportswriters dubbed "The Brain," "The Mahatma," and, on occasion, "El Cheapo" Lee Lowenfish tells the full, colorful story of a life that forever changed the face of America's game. From 1917 to 1942, Rickey was the mastermind behind the Saint Louis Cardinals who enabled small-market clubs to compete with the rich and powerful by creating the farm system. Under his direction in the 1940s, the Brooklyn Dodgers became the first true "America's team." By signing Jackie Robinson and other black players, he single-handedly thrust baseball into the forefront of the civil rights movement. Lowenfish evokes the peculiarly American complex of God, family, and baseball that informed Rickey's actions and his accomplishments. His book offers an intriguing, richly detailed portrait of a man whose life is itself a crucial chapter in the history of American business, sport, and society.

Why are certain methods of punishment adopted or rejected in a given social situation? To what extent is the development of penal methods determined by basic social relations? The answers to these questions are complex, and go well beyond the thesis that institutionalized punishment is simply for the protection of society. While today's punishment

of offenders often incorporates aspects of psychology, psychiatry, and sociology, at one time there was a more pronounced difference in criminal punishment based on class and economics.

Punishment and Social Structure originated from an article written by Georg Rusche in 1933 entitled "Labor Market and Penal Sanction: Thoughts on the Sociology of Criminal Justice." Originally published in Germany by the Frankfurt Institute of Social Research, this article became the germ of a theory of criminology that laid the groundwork for all subsequent research in this area. Rusche and Kirchheimer look at crime from an historical perspective, and correlate methods of punishment with both temporal cultural values and economic conditions. The authors classify the history of crime into three primary eras: the early Middle Ages, in which penance and fines were the predominant modes of punishment; the later Middle Ages, in which harsh corporal punishment and capital punishment moved to the forefront; and the seventeenth century, in which the prison system was more fully developed. They also discuss more recent forms of penal practice, most notably under the constraints of a fascist state. The majority of the book was translated from German into English, and then reshaped by Rusche's co-author, Otto Kirchheimer, with whom Rusche actually had little discussion. While the main body of Punishment and Social

Structure are Rusche's ideas, Kirchheimer was responsible for bringing the book more up-to-date to include the Nazi and fascist era. Punishment and Social Structure is a pioneering work that sets a paradigm for the study of crime and punishment.
