As media environments and communication practices evolve over time, so do theoretical concepts. This book analyzes some of the most well-known and fiercely discussed concepts of the digital age from a historical perspective, showing how many of them have pre-digital roots and how they have changed and still are constantly changing in the digital era. Written by leading authors in media and communication studies, the chapters historicize 16 concepts that have become central in the digital media literature, focusing on three main areas. The first part, Technologies and Connections, historicises concepts like network, media convergence, multimedia, interactivity and artificial intelligence. The second one is related to Agency and Politics and explores global governance, datafication, fake news, echo chambers, digital media activism. The last one, Users and Practices, is finally devoted to telepresence, digital loneliness, amateurism, user generated content, fandom and authenticity. The book aims to shed light on how concepts emerge and are co-shaped, circulated, used and reappropriated in different contexts. It argues for the need for a conceptual media and communication history that will reveal new developments without concealing continuities and it demonstrates how the analogue/digital dichotomy is often a

misleading one.

How the interactions of non-elites influenced Athenian material culture and society The seventh century BC in ancient Greece is referred to as the Orientalizing period because of the strong presence of Near Eastern elements in art and culture. Conventional narratives argue that goods and knowledge flowed from East to West through cosmopolitan elites. Rejecting this explanation, Athens at the Margins proposes a new narrative of the origins behind the style and its significance, investigating how material culture shaped the ways people and communities thought of themselves. Athens and the region of Attica belonged to an interconnected Mediterranean, in which people, goods, and ideas moved in unexpected directions. Network thinking provides a way to conceive of this mobility, which generated a style of pottery that was heterogeneous and dynamic. Although the elite had power, they were unable to agree on the norms of conspicuous consumption and status display. A range of social actors used objects, contributing to cultural change and to the socially mediated production of meaning. Historiography and the analysis of evidence from a wide range of contexts—cemeteries, sanctuaries, workshops, and symposia—offers the

possibility to step outside the aesthetic frameworks imposed by classical Greek masterpieces and to expand the canon of Greek art. Highlighting the results of new excavations and looking at the interactions of people with material culture, *Athens at the Margins* provocatively shifts perspectives on Greek art and its relationship to the eastern Mediterranean.

Innovation is about change, and media products and services are changing. The processes of production and distribution of media are changing. The ownership and financing of media are changing. The roles of users are changing. And our ideas about media are changing. This book argues that innovation theory provides better tools for media researchers who wish to understand and explain current developments in the media landscape ? tools that not only allow them to see completely new things, but also to investigate aspects of new media that would otherwise not be as accessible. The various chapters of the book present selected studies that together illustrate how a more explicit focus on innovation and innovation theory can provide new insights into and generates knowledge about how media innovations develop, the sociocultural conditions of such innovations, the role of technology, and power relations in media developments. The Second Edition of *An Applied Guide to Research Designs* offers researchers in the social and behavioral sciences guidance for selecting the most appropriate

research design to apply in their study. Using consistent terminology, the authors visually present a range of research designs used in quantitative, qualitative, and mixed methods to help readers conceptualize, construct, test, and problem solve in their investigation. The Second Edition features revamped and expanded coverage of research designs, new real-world examples and references, a new chapter on action research, and updated ancillaries.

Written by a senior scholar and master mariner, *Sailors and Traders* is the first comprehensive account of the maritime peoples of the Pacific. It focuses on the sailors who led the exploration and settlement of the islands and New Zealand and their seagoing descendants, providing along the way new material and unique observations on traditional and commercial seagoing against the background of major periods in Pacific history. The book begins by detailing the traditions of sailors, a group whose way of life sets them apart. Like all others who live and work at sea, Pacific mariners face the challenges of an often harsh environment, endure separation from their families for months at a time, reverse their vessels, and share a singular attitude to risk and death. The period of prehistoric seafaring is discussed using archaeological data, interpretations from interisland exchanges, experimental voyaging, and recent DNA analysis. Sections on the arrival of foreign exploring ships centuries later concentrate on

relations between visiting sailors and maritime communities. The more intrusive influx of commercial trading and whaling ships brought new technology, weapons, and differences in the ethics of trade. The successes and failures of Polynesian chiefs who entered trading with European-type ships are recounted as neglected aspects of Pacific history. As foreign-owned commercial ships expanded in the region so did colonialism, which was accompanied by an increase in the number of sailors from metropolitan countries and a decrease in the employment of Pacific islanders on foreign ships. Eventually small-scale island entrepreneurs expanded interisland shipping, and in 1978 the regional Pacific Forum Line was created by newly independent states. This was welcomed as a symbolic return to indigenous Pacific ocean linkages. The book's final sections detail the life of the modern Pacific seafarer. Most Pacific sailors in the global maritime labor market return home after many months at sea, bringing money, goods, a wider perspective of the world, and sometimes new diseases. Each of these impacts is analyzed, particularly in the case of Kiribati, a major supplier of labor to foreign ships.

Robert Louis Stevenson and the Pictorial Text explores the genesis, production and the critical appreciation of the illustrations to the fiction of Robert Louis Stevenson. Stevenson is one of the most copied and interpreted authors of the late nineteenth century, especially his novels

Treasure Island and Strange Case of Dr Jekyll and Mr Hyde. These interpretations began with the illustration of his texts in their early editions, often with Stevenson's express consent, and this book traces Stevenson's understanding and critical responses to the artists employed to illustrate his texts. In doing so, it attempts to position Stevenson as an important thinker and writer on the subject of illustrated literature, and on the marriage of literature and visual arts, at a moment preceding the dawn of cinema, and the rejection of such popular tropes by modernist writers of the early twentieth century.

The "Vínland Map" first surfaced on the antiquarian market in 1957 and the map's authenticity has been hotly debated ever since—in controversies ranging from the anomalous composition of the ink and the map's lack of provenance to a plethora of historical and cartographical riddles. *Maps, Myths, and Men* is the first work to address the full range of this debate.

Focusing closely on what the map in fact shows, the book contains a critique of the 1965 work *The Vinland Map and the Tartar Relation*; scrutinizes the marketing strategies used in 1957; and covers many aspects of the map that demonstrate it is a modern fake, such as literary evidence and several scientific ink analyses performed between 1967 and 2002. The author explains a number of the riddles and provides evidence for both the identity of the mapmaker and the source of the parchment used, and she applies current knowledge of medieval Norse culture and exploration to counter widespread misinformation about Norse voyages to North America and about the Norse world picture.

and 2008 President, Modern Language Association This collection is a timely intervention in national debates about what constitutes original or plagiarized writing in the digital age. Somewhat ironically, the Internet makes it both easier to copy and easier to detect copying. The essays in this volume explore the complex issues of originality, imitation, and plagiarism, particularly as they concern students, scholars, professional writers, and readers, while also addressing a range of related issues, including copyright conventions and the ownership of original work, the appropriate dissemination of innovative ideas, and the authority and role of the writer/author. Throughout these essays, the contributors grapple with their desire to encourage and maintain free access to copyrighted material for noncommercial purposes while also respecting the reasonable desires of authors to maintain control over their own work. Both novice and experienced teachers of writing will learn from the contributors' practical suggestions about how to fashion unique assignments, teach about proper attribution, and increase students' involvement in their own writing. This is an anthology for anyone interested in how scholars and students can navigate the sea of intellectual information that characterizes the digital/information age. "Eisner and Vicinus have put together an impressive cast of contributors who cut through the war on plagiarism to examine key specificities that often get blurred by the rhetoric of slogans. It will be required reading not only for those concerned with plagiarism, but for the many more who think about what it means to be an author, a student, a scientist, or anyone who negotiates and renegotiates the meaning of originality and imitation in collaborative and information-intensive settings." ---Mario Biagioli, Professor of the History of Science, Harvard University, and coeditor of *Scientific Authorship: Credit and Intellectual Property in Science* "This is an important collection that addresses issues of great significance

The series *Studies in Language Change* presents empirically based research that extends knowledge about historical relations among the world's languages without restriction to any particular language family or region. While not devoted explicitly to theoretical explanations, the series hopes to contribute to the advancement in understandings of language change as well as adding to the store of well-analysed historical-comparative data on the world's languages. With this significant new work, Larry Cuban provides a unique and insightful perspective on the bridging of the long-standing and well-known gap between teachers and administrators. Drawing on the literature of the field as well as personal experience, Cuban recognizes the enduring structural relationship within school organizations inherited by teachers, principals, and superintendents, and calls for a renewal of their sense of common purpose regarding the role of schooling in a democratic society. Cuban analyzes the dominant images (moral and technical), roles (instructional, managerial, and political), and contexts (classroom, school, and

district) within which teachers, principals, and superintendents have worked over the last century. He concludes that when these powerful images and roles are wedded to the structural conditions in which schooling occurs, “managerial behavior” results, thus narrowing the potential for more thoughtful, effective, and appropriate leadership. Cuban then turns to consider this situation with respect to the contemporary movement for school reform, identifying significant concerns both for policymakers and practitioners. This honest, thought-provoking book by a leading scholar, writer, and practitioner in the field represents an invaluable resource—an insightful introduction for those just entering the field and a fresh, new perspective for those long-familiar with its complexities. Cuban’s ethnographic approach to the development of his own career and viewpoint, as well as his highly readable style, make this a work of lasting value.

A new and chilling study of lethal human exploitation in the Soviet forced labor camps, one of the pillars of Stalinist terror In a shocking new study of life and death in Stalin’s Gulag, historian Golfo Alexopoulos suggests that Soviet forced labor camps were driven by brutal exploitation and often administered as death camps. The first study to examine the Gulag penal system through the lens of health, medicine, and human exploitation, this extraordinary work draws from previously inaccessible archives to offer a chilling new view of one of the pillars of Stalinist terror.

This book is the first of its type on NEOM Region, NW of Saudi Arabia. This region has been designated in 2017 to be an international economic hub. However, no studies have been done on this region which occupies several natural resources including

remarkable landscape with unique ecological species, ores and water resources. The region is also vulnerable to many aspects of threatening natural hazards. Based on her expertise, namely geomorphological processes, earth sciences, space techniques and natural risk assessment, the author made an initiative to produce this book using advanced tools, specifically satellite images and geo-information system. The book introduces several thematic maps obtained for the first time for NEOM Region. Hence, it represents a scientific guide for land management and urban planning approaches. This book is a very significant document for a variety of readers and researchers including decision makers, land managers and planners, as well as geographers and geologists. In addition, the basic concepts and new approaches attract researchers and academic teams including students, universities and research centers not only in Saudi Arabia, but in different parts of the World.

The riveting, definitive account of the ancient Greek city of Thebes, by the acclaimed author of *The Spartans* Among the extensive writing available about the history of ancient Greece, there is precious little about the city-state of Thebes. At one point the most powerful city in ancient Greece, Thebes has been long overshadowed by its better-known rivals, Athens and Sparta. In *Thebes: The Forgotten City of Ancient Greece*, acclaimed classicist and historian Paul Cartledge brings the city vividly to life and argues that it is central to our understanding of the ancient Greeks' achievements—whether politically or culturally—and thus to the wider politico-cultural

traditions of western Europe, the Americas, and indeed the world. From its role as an ancient political power, to its destruction at the hands of Alexander the Great as punishment for a failed revolt, to its eventual restoration by Alexander's successor, Cartledge deftly chronicles the rise and fall of the ancient city. He recounts the history with deep clarity and mastery for the subject and makes clear both the differences and the interconnections between the Thebes of myth and the Thebes of history. Written in clear prose and illustrated with images in two color inserts, Thebes is a gripping read for students of ancient history and those looking to experience the real city behind the myths of Cadmus, Hercules, and Oedipus.

Published by OpenStax College, U.S. History covers the breadth of the chronological history of the United States and also provides the necessary depth to ensure the course is manageable for instructors and students alike. U.S. History is designed to meet the scope and sequence requirements of most courses. The authors introduce key forces and major developments that together form the American experience, with particular attention paid to considering issues of race, class and gender. The text provides a balanced approach to U.S. history, considering the people, events and ideas that have shaped the United States from both the top down (politics, economics, diplomacy) and bottom up (eyewitness accounts, lived experience).

with no prior knowledge of ancient art, this textbook reviews the main objects and monuments of the ancient Greek world, emphasizing the context and function of these artefacts in their particular place and time. Students are led to a rich understanding of how objects were meant to be perceived, what 'messages' they transmitted and how the surrounding environment shaped their meaning. The book contains nearly five hundred illustrations (with over four hundred in colour), including specially commissioned photographs, maps, floorplans and reconstructions. Judith M. Barringer examines a variety of media, including marble and bronze sculpture, public and domestic architecture, painted vases, coins, mosaics, terracotta figurines, reliefs, jewellery and wall paintings. Numerous text boxes, chapter summaries and timelines, complemented by a detailed glossary, support student learning.

A comprehensive and richly illustrated history of one of the most important athletic, religious, and political sites in the ancient Greek and Roman world The memory of ancient Olympia lives on in the form of the modern Olympic Games. But in the ancient era, Olympia was renowned for far more than its athletic contests. In Olympia, Judith Barringer provides a comprehensive and richly illustrated history of one of the most important sites in the ancient Greek and Roman world, where athletic competitions took place alongside—and were closely connected with—crucial religious and political activities. Barringer describes the development of the Altis,

the most sacred area of Olympia, where monuments to athletes successful in the games joined those erected to the gods and battlefield victories. Rival city-states and rulers built monuments to establish eminence, tout alliances, and join this illustrious company in a rich intergenerational dialogue. The political importance of Olympia was matched by its place as the largest sanctuary dedicated to Zeus, king of the gods. Befitting Zeus's role as god of warfare, the Olympian oracle was consulted to ensure good omens for war, and the athletic games embodied the fierce competition of battle. Other gods and heroes were worshipped at Olympia too, Hera, Artemis, and Herakles among them. Drawing on a comprehensive knowledge of the archaeological record, Barringer describes the full span of Olympia's history, from the first monumental building around 600 BC to the site's gradual eclipse in the late Christianized Roman empire. Extensively illustrated with maps and diagrams, Olympia brings the development of Olympia vividly to life for modern readers.

Tangata Whenua: An Illustrated History charts the sweep of M?ori history from ancient origins through to the twenty-first century. Through narrative and images, it offers a striking overview of the past, grounded in specific localities and histories. The story begins with the migration of ancestral peoples out of South China, some 5,000 years ago. Moving through the Pacific, these early voyagers arrived in Aotearoa early in the second millennium AD, establishing themselves as tangata whenua in the place that would become New Zealand. By the nineteenth century, another wave of settlers brought new technology, ideas and trading

opportunities – and a struggle for control of the land. Survival and resilience shape the history as it extends into the twentieth century, through two world wars, the growth of an urban culture, rising protest, and Treaty settlements. Today, at the beginning of the twenty-first century, M?ori are drawing on both international connections and their ancestral place in Aotearoa. Fifteen stunning chapters bring together scholarship in history, archaeology, traditional narratives and oral sources. A parallel commentary is offered through more than 500 images, ranging from the elegant shapes of ancient taonga and artefacts to impressions of M?ori in the sketchbooks and paintings of early European observers, through the shifting focus of the photographer's lens to the response of contemporary M?ori artists to all that has gone before. The many threads of history are entwined in this compelling narrative of the people and the land, the story of a rich past that illuminates the present and will inform the future.

A translation that captures the power of one of the greatest war stories ever told—Julius Caesar's account of his brutal campaign to conquer Gaul Imagine a book about an unnecessary war written by the ruthless general of an occupying army—a vivid and dramatic propaganda piece that forces the reader to identify with the conquerors and that is designed, like the war itself, to fuel the limitless political ambitions of the author. Could such a campaign autobiography ever be a great work of literature—perhaps even one of the greatest? It would be easy to think not, but such a book exists—and it helped make Julius Caesar a legend. This remarkable translation of Caesar's War for Gaul captures, like never before in English, the powerfully concise style of the future emperor's dispatches from the front lines in what are today France, Belgium, Germany, and Switzerland.

As the United Nations Decade on Biodiversity 2011–2020 comes to a close and countries prepare to adopt a post-2020 global biodiversity framework, this edition of The State of the World's Forests (SOFO) examines the contributions of forests, and of the people who use and manage them, to the conservation and sustainable use of biodiversity. Forests cover just over 30 percent of the global land area, yet they provide habitat for the vast majority of the terrestrial plant and animal species known to science. Unfortunately, forests and the biodiversity they contain continue to be under threat from actions to convert the land to agriculture or unsustainable levels of exploitation, much of it illegal. The State of the World's Forests 2020 assesses progress to date in meeting global targets and goals related to forest biodiversity and examines the effectiveness of policies, actions and approaches, in terms of both conservation and sustainable development outcomes. A series of case studies provide examples of innovative practices that combine conservation and sustainable use of forest biodiversity to create balanced solutions for both people and the planet.

Key Methods in Geography is an introduction to the principal methodological issues involved in the collection, analysis and presentation of geographical information. It is unique in the reference literature for providing an overview of qualitative and quantitative methods for human and physical geography. An accessible primer, it will be used by students as a reference throughout their degree, on all issues from research design to presentation. This second edition has been fully revised and updated and includes new chapters on internet mediated research, diaries as a research method, making observations and measurements in the field, and the analysis of natural systems. Organized into four sections: Getting Started in Geographical Research; Generating and Working with Data in Human Geography; Generating and Working with Data in Physical Geography; Representing and Interpreting Geographical Data; each chapter comprises: A

This is a compelling study of the often controversial role and meaning of the new media and digital cultures in contemporary society. Three decades of societal and cultural alignment of new media yielded to a host of innovations, trials, and problems, accompanied by versatile popular and academic discourse. "New Media Studies" crystallized internationally into an established academic discipline, which begs the question: where do we stand now; which new issues have emerged now that new media are taken for granted, and which riddles remain unsolved; and, is contemporary digital culture indeed all about 'you', or do we still not really understand the digital machinery and how it constitutes us as 'you'. From desktop metaphors to Web 2.0 ecosystems, from touch screens to blogging to e-learning, from role-playing games to Cybergoth music to wireless dreams, this timely volume offers a showcase of the most up-to-date research in the field from what may be called a 'digital-materialist' perspective.

Engaging Minds: Cultures of Education and Practices of Teaching explores the diverse beliefs and practices that define the current landscape of formal education. The 3rd edition of this introduction to interdisciplinary studies of teaching and learning to teach is restructured around four prominent historical moments in formal education: Standardized Education, Authentic Education, Democratic Citizenship Education, Systemic Sustainability Education. These moments serve as the foci of the four sections of the book, each with three chapters dealing respectively with history, epistemology, and pedagogy within the moment. This structure makes it possible to read the book in two ways – either "horizontally" through the four in-depth treatments of the moments or "vertically" through coherent threads of history, epistemology, and pedagogy. Pedagogical features include suggestions for delving deeper to get at subtleties that can't be simply stated or appreciated through reading alone, several strategies to highlight and distinguish important vocabulary in the text, and more than 150 key theorists and researchers included among the search terms and in the Influences section rather than a formal reference list.
