Like three guides in one, Scientific Argumentation in Biology combines theory, practice, and biological content. This thought-provoking book starts by giving you solid background in why students need to be able to go beyond expressing mere opinions when making research-related biology claims. Then it provides 30 field-tested activities your students can use when learning to propose, support, and evaluate claims; validate or refute them on the basis of scientific reasoning; and craft complex written arguments. Detailed teacher notes suggest specific ways to use the activities to enrich and supplement (not replace) what you're doing in class already. You'll find Scientific Argumentation to be an ideal way to help your students learn standards-based content, improve their practices, and develop scientific habits of mind.

Learn Key AP Biology Concepts in Under an Hour! Read on your PC, Mac, smartphone, tablet or Kindle device! In AP Biology: 21 Must Know Concepts to Ace the Test, you'll learn many of the most frequently tested concepts for AP Biology, including but not limited to Endosymbiosis, the Hardy Weinberg Equation, and Mendelian Genetics. This book covers not only what these concepts are, but why they are important in the context of AP Biology. These articles were originally posted on the Learnerator blog and were compiled in no particular order. If you feel like you have no idea where to start when it comes to AP Biology prep, read this book to begin understanding 21 key concepts for the AP Biology exam. Grab your copy today. Here is a preview of what is inside this book: Introduction Abiogenesis Anaerobic Respiration Animal Behavior Cell Organelles Diffusion & Osmosis Dissolved Oxygen DNA Replication Endocrine System Endosymbiosis Enzymes Hardy Weinberg Equation Heredity Immune Systems Kingdoms Krebs Cycle Lipids Mendelian Genetics Mitosis and Meiosis Nucleic Acids Scientific Method Transcription and Translation Conclusion An excerpt from the book: Anaerobic respiration is how cells make energy when, as you may have guessed from the name, there is no available oxygen. In fact, for this process there is neither oxygen nor mitochondria present. The two processes that allow this to work are those of glycolysis and fermentation. In cellular respiration, what we normally see is glucose breaks down to pyruvate and from this process we net 2 ATP. Next, the pyruvate will go into the mitochondria and enter the Krebs cycle. In the process of being converted to acetyl CoA, CO₂ is given off and another 2 ATP are made. This energy is stored in NADH and FADH₂. Their electrons move into the electron transport chain which will move to oxygen to transform the product to water. In this, 23-34 ATP are made.

A test taker has to not only understand the material that is being covered on the test, but also must be familiar with the strategies that are necessary to properly utilize the time provided and get through the test without making any avoidable errors. Test Prep Books has drilled down the top test-taking tips for you to know. Anyone planning to take this exam should take advantage of the AP Biology study guide review material, practice test questions, and test-taking strategies contained in this Test Prep Books study guide.

Why are students today not learning biology, appreciating its importance in their lives, or pursuing it as a career? Experts believe dismal learning experiences in biology classes are causing the vast majority of students to miss information that could help them lead healthier lives and make more intelligent decisions as adults. How can we improve the teaching of biology throughout the school curriculum? Fulfilling the Promise offers a vision of what biology education in our schools could be--along with practical, hard-hitting recommendations on how to make that vision a reality. Noting that many of their recommended changes will be controversial, the authors explore in detail the major questions that must be answered to bring biology education to an acceptable standard: how elementary, middle, and high-school biology education arrived at its present state; what impediments stand in the way of improving biology education; how to properly prepare biology teachers and encourage their continuing good performance; and what type of leadership is needed to improve biology education.
