DIFFERENTIAL TRANSFORM METHOD APPLIED ON ... The infiltration phenomenon with External effect (Input and output) is defined by a non-linear partial differential equation, which gives the soil moisture content under suitable conditions. The moisture content was determined and was analyzed using the Differential transform method. Application of Differential Transform Method to the ... In this paper, the differential transform method (DTM) will be applied to the generalized Burgers-Huxley equation, and some special cases of the equation, say, Huxley equation and... **APPLICATION OF DIFFERENTIAL TRANSFORM METHOD ...** In this paper we extend the application of differential transform method to construct an analytical approximate solution of the linear differential equations of electrical circuits. This paper is organized as follows: In section 2, the differential transform method ... Application of Differential Transform Method for Solving The methods provide solutions in terms of convergent series with easily computable components. The aim of this article is to introduce the Differential Transform Method (DTM) as efficient tools to solve different kinds of singular integral equations. *A multi-step differential transform method and application ...* The differential transform method (DTM) is an analytical and numerical method for solving a wide variety of differential equations and usually gets the solution in a series form. In this paper, we propose a reliable new algorithm of DTM, namely multi-step DTM, which will increase the interval of convergence for the series solution. *Application of Differential Transform Method with ...* Abstract. The differential transform method (DTM) for solving linear and nonlinear higher order differential equations especially which arising in the field of electric circuit problems is used. In almost cases, DTM gives the series of solutions which can be easily converted to exact ones. **Application of Projected Differential Transform Method on ...** The purpose of the method is obtained analytical or approximate solutions of some nonlinear partial differential equations with proportional delay. Zhou introduced the basic idea of DTM in 1980, to solve linear and non-linear initial value problem that applies in electrical circuits. **DIFFERENTIAL TRANSFORM METHOD FOR SOLVING ...** Abstract: In this paper, we consider the differential transform method (DTM) for solving approximate and exact solutions of linear and homogeneous partial differential equation with the variable co-efficients. The efficiency of the considered method is illustrated by some problems. **Application to Differential Transform Method for MHD ...**

Introduction. Body forces on fluid create natural convection flow problems that are frequently come across in fluid engineering. Such natural convection problems may be taken as convection flow about a plane surface, kept along the direction of the force. Application of Reduced Differential Transform Method for ... In this paper, the differential transformation method (Zhou, 1986; Arikoglu and Ozkol, 2008; Keskin and Oturanc, 2009; Jang et al., 2006; Kurnaz and Oturance, 2005) is applied to solve the nonlinear reaction-diffusion-convection equation (1) Differential Transform Method for Solving the Two ... In this paper, we develop the Differential Transform (DT) method in a new scheme to solve the two-dimensional Fredholm integral equations (2D-FIEs) of the second kind. The differential transform method is a procedure to obtain the coefficients of the Taylor expansion of the solution of differential and integral equations. *Application of the Hybrid Differential Transform Method ...* Our aim of this approach is to combine the flexibility of differential transform and the efficiency of finite differences. An explicit hybrid method for the transient response of... **Differential Transform Technique for Second Order ...** Abstract: In this paper, one dimensional Differential Transform Method (DTM) is applied on a class of second order differential equations leading to derivation of closed form solutions. Comparison is made between numerical solutions obtained using DTM and exact solutions derivable from application of Laplace transform method. Differential transform method: A comprehensive review and ... Among semi-analytical methods, the differential transform method (DTM) is one of the most popular and practical algorithms. This method was introduced by Zhou [95] in 1986 for solving IVPs in the field of electrical circuits. The method is based on the calculation of the coefficients of the Taylor series of the problem's solution. *Differential Transform Method for Solving* In this study, differential transform method (DTM) is applied to linear and nonlinear system of ordinary differential equations. If the system considered has a solution in terms of the series expansion of known functions, this powerful method catches the exact solution. So as to show this capability and robustness, some systems of ordinary differ- **Application of Differential Transform Method to the ...** In this paper, the differential transform method (DTM) will be applied to the generalized Burgers-Huxley equation, and some special cases of the equation, say, Huxley equation and Fitzhugh-Nagoma equation. The DTM produces an approximate solution for the equation, with few and easy computations. *An Application of Differential Transform Method to Solve ...* An Application of Differential Transform Method to Solve an Epidemic Model — Ebola Virus Disease Outbreaks. Key words: Differential transformation method, Lane - Emden differential equation, systems of Volterra integral equations of the second kind. *Application of Differential Transform Method to the ...* In this paper, the differential transform method (DTM) will be applied

to the generalized Burgers-Huxley equation, and some special cases of the equation, say, Huxley equation and Fitzhugh-Nagoma equation. The DTM produces an approximate solution for the equation, with few and easy computations.

Differential Transform Method for system of Linear ... The concept of Differential Transform Method (DTM) was first proposed by Zhou and proves that DTM is an iterative procedure for obtaining analytic Taylor's series solution of differential equations. DTM is very useful to solve equation in ordinary differential equation. It is also applied to solve boundary value problems¹². **Application of Differential Transform Method to Vibration ...** Abstract— In this paper, we used differential transform method (DTM) to analyse free vibration of a railway bridge, modelled as an orthotropic rectangular plate, supported by Pasternak foundation. The effect of damping was considered. The present method transformed the governing equation to its algebraic form. **Application of Laplace-Differential Transform Method to ...** In this paper, we use a coupling of the Laplace transform method and the DTM for solving nonlinear PDEs with boundary conditions. The goodness of this method is its capability of combining two strongest methods for finding fast convergent series solution of PDEs.
