Italian motorcycles have a place in history – and many enthusiasts’ hearts – out of all proportion to the numbers that have been built. From Moto Guzzi becoming the first non-British marque to win a TT through to Ducati’s achievements in MotoGP, they have also been at the forefront of motorsport despite being far smaller than, at first, the British and later the Japanese manufacturers. If the number of motorcycles built by Italian manufacturers is small, the sheer number of Italian motorcycle factories will surprise readers. Almost 600 marques were identified in researching this book, and there may have been thousands. This is partly because there were so many engines available off the shelf – many of them English – as well as a thriving accessory and component industry. A–Z of Italian Motorcycle Manufacturers only deals briefly with the grand marques Ducati and Moto Guzzi because there have been many dedicated books about them. Instead this is a definitive guide to the factories that have been less widely covered or, in most cases, never before in the English language. Some, such as Bianchi and Garelli, might be familiar: others, remembered for their racing achievements or uniqueness, such as Morbidelli, and many you may have never heard of. But if it was possible to establish when and where the factories were active, and at least a little about the motorcycles they built, then there is an entry for them. An appendix lists the other manufacturers that are lesser known, making this the most complete reference book of Italian motorcycles available today. This book is a complete guide to Italian motorcycle manufacturers, and an essential reference for anyone with an interest in these fascinating vehicles. An instant bestseller when first published in 1929—biographies of twelve bold individuals from history and what they did to separate themselves from the pack. In his trademark journalist style, author William Bolitho details the lives of twelve great adventurers—Alexander the Great, Casanova, Christopher Columbus, Mahomet, Lola Montez, Cagliostro (and Seraphina), Charles XII of Sweden, Napoleon I, Lucius Sergius Catiline, Napoleon III, Isadora Duncan, and Woodrow Wilson. Bolitho elucidates both the struggles and successes that made these figures so iconic, and demonstrates how they all battled convention and conformity to achieve enduring fame and notoriety. “We are born adventurers,” Bolitho writes, “and the love of adventures never leaves us till we are very old; old, timid men, in whose interest it is that adventure should quite die out. This is why all the poets are on one side, and all the laws on the other; for laws are made by, and usually for, old men.” Though his essays are nearly one hundred years old, they encompass the timeless values of perseverance, bravery, and strength of spirit that have proven to resonate with the pioneers and thought leaders of today. “It’s really quite good.” —Elon Musk “Twelve Against the Gods provides an interesting perspective on what drove and impeded this group of adventurers . . . A good read for anyone who’s interested in history or looking to find some motivation to switch things up and break the rules.” —Áine Cain, Business Insider “I think Twelve Against the Gods is also very appropriate for this day and age. We need adventurers, and there still are a lot of adventurers.” —China Ryall, daughter of William Bolitho

Prevailing wage laws affecting the construction industry in the United States exist at the Federal and State levels. These laws require that construction workers employed by contractors on government works be paid at least the wage rates and fringe benefits 'prevailing' for similar work where government contract work is performed. The federal law (Davis-Bacon Act) was passed in 1931. By 1969 four fifth of States had enacted prevailing wage legislation. In the 1970s, facing fiscal crises, States considered repealing their laws in an effort to reduce construction costs, and since 1979 nine States have repealed their laws. These repeals at State level along with unsuccessful attempts to repeal the Davis-Bacon Act have pushed prevailing wages to the forefront of public policy and controversy. This book, for the first time, brings together scholarly research in the economics of prevailing wages placed in historical and institutional context.

This official history of the FIM Grand Prix motor cycle racing World Championship, since its formation in 1949, records the action from a sport that has seen massive changes during the last 50 years with Japanese manufacturers eclipsing their European rivals, purpose-built race circuits replacing true road courses and a reduction in the number of Grand Prix classes. In other respects it has enjoyed remarkable continuity, as motor cycle racing has remained the domain of the major manufacturers anxious to promote the awareness of their road machines. Contemporary Grand Prix designs are clearly descended from the bikes raced in the 1950s. This book traces the major trends and developments during the last 50 years and it profiles the legendary riders, teams and innovators that have dominated the sport during this period. Concluding the history is a comprehensive and detailed results section which provides an invaluable source of reference for any motor cycle enthusiast.

Originally published in 1993, this volume was unique in its scope and approach: Unlike most literature on nuclear weapons proliferation at the time, the essays in this volume offer theoretical discussions and suggest testable hypotheses about the causes and effects of nuclear weapons proliferation. The proliferation of nuclear weapons is an ideal subject for social science scholarship, and such scholarship is especially timely now. Among the topics discussed in *The Proliferation Puzzle* are: The building of nuclear weapons is a complex task touching upon many of the subjects of study at the core of social science and international relations. Nuclear weapons may be acquired as a hedge against external threat, for reasons of national prestige, or as a result of pressures by domestic coalitions among scientists, bureaucrats, and the military. They may be sought for defensive purposes or to support hegemonic aspirations. Nuclear weapons also raise questions about civilian command and control, especially in crisis situations. During the last two decades the acquisition of nuclear weapons has been proscribed by the non-proliferation regime. The decisions countries made about acquiring these weapons and the manner they chose to build them serve as a test of the efficacy of this particular regime, and of international regimes more generally. Nuclear weapons were introduced at the time bipolarity became the international order. As the world moves away from bipolarity, there is a need to answer questions such as: What would be the effect of nuclear weapons in a multipolar order? How will the spread of nuclear weapons affect the distribution of capabilities among states? If nuclear weapons spread to additional countries, will they enhance stability or exacerbate instability? Can the spread of these weapons be managed or controlled? This book brings together scholars from different schools within international relations and the social sciences to address the question of why nuclear weapons spread. A disciplined, rigorous examination of proliferation is important not only for scholarship but also for informed policymaking. The purpose of social science is to formulate hypotheses and devise theories that advance our understanding of society and aid in the fashioning of enlightened policy. The essays in this volume show how explicit hypotheses about the causes and consequences of nuclear weapons proliferation provide a deeper understanding of the problem and suggest specific, theory-informed policy recommendations.

From the author of the celebrated classic *Louder Than Hell* comes an oral history of the badass Heavy Metal lifestyle—the debauchery, demolition, and headbanging dedication—featuring metalhead musicians from Black Sabbath and Judas Priest to Twisted Sister and Quiet Riot to Disturbed, Megadeth, Throwdown and more. In his song “You Can’t Kill Rock and Roll” Ozzy Osbourne sings, “Rock and roll is my religion and my law.” This is the mantra of the metal legends who populate *Raising Hell*—artists from Black Sabbath, Judas Priest, Slipknot, Slayer, and Lamb of God to Twisted Sister, Quiet Riot, Disturbed, Megadeth, and many more! It’s also the guiding principle for underground voices like Misery Index, Gorgoroth, Municipal Waste, and Throwdown. Through the decades, the metal scene has been populated by colorful individuals who have thwarted convention and lived by their own rules. For many, vice has been virtue, and the opportunity to record albums and tour has been an invitation to push boundaries and blow the lid off a Pandora’s box of riotous experiences: thievery, vandalism, hedonism, the occult, stage mishaps, mosh pit atrocities, and general insanity. To the figures in this book, metal is a means of banding together to stick a big middle finger to a society that had already decided they didn’t belong. Whether they were oddballs who didn’t fit in or angry kids from troubled backgrounds, metal gave them a sense of identity. Drawing from 150-plus first-hand interviews with vocalists, guitarists, bassists, keyboardists, and drummers, music journalist Jon Wiederhorn offers this collection of wild shenanigans from metal’s heaviest and most iconic acts—the parties, the tours, the mosh pits, the rage, the joy, the sex, the drugs . . . the heavy metal life! Horns up!
