This book examines the cultural criticism led by New York intellectuals from the 1960s onwards, considering the influence of such critique on American collective memory and contemporary public culture. With a focus on essays that appeared in Dissent magazine—one of the most important journals of the New York intellectuals—from the year of its launch in 1954 to its most recent issue, as well as representative books on American culture by Daniel Bell and Russell Jacoby, the author contends that post-Sixties narratives constitute a special paradigm of cultural criticism that seek radical possibilities for societal change in the US, based on a use of the 1960s as an index for understanding American cultural and political life. A study of the ways in which narratives can move beyond story-telling to have interpretative and ideological functions as a form of criticism, this book will appeal to scholars of cultural studies and sociology, as well as those working in the fields of linguistics and literary theory.

This book presents a new framework for leadership in the construction industry which draws from the authentic leadership construct. The framework has three major themes: self-leadership, self-transcendent leadership, and sustainable leadership. Despite its significance, leadership has not been given due importance in the construction industry as focus is placed on managerial functionalism. At the project level, even with the technological advances in the industry in recent years, construction is realized in the form of people undertaking distinct interdependent activities which require effective leadership. The industry faces many challenges including: demanding client requirements and project parameters; more stringent regulations, codes and systems; intense competition in the industry; and threats from disruptive enterprise. In such a complex environment, technology-driven and tool-based project and corporate management is insufficient. It must be complemented by a strategic, genuine, stakeholder-focused and ethical leadership. Leadership in the Construction Industry is based on a study on authentic leadership and its development in Singapore. Leadership theories and concepts are reviewed; the importance of leadership in the construction industry is discussed; and the grounded theory approach which was applied in the study is explained. Many eminent construction professionals in Singapore were interviewed in the field study. Emerging from the experiences of the leaders documented in this book are three major themes: (1) self-leadership: how leaders engage in various self-related processes such as self-awareness, self-regulation, and role modeling. (2) self-transcendent leadership: how leaders go beyond leading themselves to leading others through servant leadership, shared leadership, spiritual leadership, and socially-responsible leadership; and, finally, (3) sustainable leadership or the strategies leaders employ to make the impact of their leadership lasting. A synthesis of these themes and their implications for leadership development is presented before the book concludes with some recommendations for current and aspiring leaders about how they can engage with them. This book is essential reading for all construction practitioners from all backgrounds; and researchers on leadership and management in construction.

The most complete collection of contemporary bike art ever compiled, by leading outsider artists from the US, UK, Europe, Australia and Japan. Choppers, Road Rockets, Greasers, Café Racers, Dirt Trackers and Conceptual creations. Every tribe, sub-culture and shade of emotion which four-stroke freedom machines inspire is represented. This is the art that captures the dreams and realities of every motorcyclist in the world.

For 100 years, the Isle of Man Tourist Trophy races have been the world's most dangerous organized sporting event. As one of thirty thousand fans who attended the annual spectacle, Mark Gardiner harbored no illusions about his own skill or bravery. He was, however, an avid motorcyclist for whom the race represented a boyhood dream. He went home, quit his job, sold everything he owned, and returned to the Island to race there himself. Riding Man is the account of an Everyman, struggling to qualify for -- and survive -- the TT races. If you're a dreamer, the lesson in this book is that the pursuit of any worthwhile goal involves risks, rewards and, almost inevitably some regrets. If you're not a dreamer, the lesson is more important: the deepest regrets are always over risks not taken.

2003-2006 HONDA CBR600RR

This official history of the FIM Grand Prix motor cycle racing World Championship, since its formation in 1949, records the action from a sport that has seen massive changes during the last 50 years with Japanese manufacturers eclipsing their European rivals, purpose-built race circuits replacing true road courses and a reduction in the number of Grand Prix classes. In other respects it has enjoyed remarkable continuity, as motor cycle racing has remained the domain of the major manufacturers anxious to promote the awareness of their road machines. Contemporary Grand Prix designs are clearly descended from the bikes raced in the 1950s. This book traces the major trends and developments during the last 50 years and it profiles the legendary riders, teams and innovators that have dominated the sport during this period. Concluding the history is a comprehensive and detailed results section which provides an invaluable source of reference for any motor cycle enthusiast.

You will learn to create a roof on top of the home. You will add materials to the 3D model, create lights and cameras, and then render it. Also, you will learn to prepare the model for 3D printing.

"Roxanne's heartfelt experience reminds us of the sacred experience we all share." Mehmet C. Oz, M.D., coauthor of *YOU: The Owner's Manual* Beautifully drawn stories of hope, healing, and courage illuminate the unexpected blessings that lie beyond the hurdles in life. When Roxanne Black was only fifteen years old, she was diagnosed with lupus, a chronic inflammatory disease. As a teenager with a rare and potentially life-threatening illness, Roxanne yearned to connect firsthand with others who knew what she was experiencing. So she made the decision to turn her diagnosis into something positive. Working out of her hospital bedroom, she founded Friends' Health Connection, which is now a nationwide community that matches people with similar health conditions for friendship and mutual support. *Unexpected Blessings* brings to life Roxanne's moving personal story, as well as the wisdom and lessons of courage she has learned over the years from famous leaders and celebrities, as well as everyday heroes standing strong against adversity. We meet Sara, an eight-year-old mature beyond her years, who is struggling with AIDS and the loss of her mother, and Ruby, a chronically ill woman whose devoted husband eases her pain. We experience Roxanne's poignant encounter with Christopher Reeve before his death, and also see unbelievable kindness and acts of love—family members offering transplant organs to save loved ones, strangers supporting one another through crisis, and more. These powerful stories and reflections weave together a rich tapestry of hope, comfort, and inspiration, and serve as reminders of the incredible resilience of the human spirit in the face of overwhelming challenge. In this gorgeously written book, Roxanne Black reminds us of the courage we all possess.

For most Americans, candy is an uneasy pleasure, eaten with side helpings of guilt and worry. Yet candy accounts for only 6 percent of the added sugar in the American diet. And at least it's honest about what it is—a processed food, eaten for pleasure, with no particular nutritional benefit. So why is candy considered especially harmful, when it's not so different from the other processed foods, from sports bars to fruit snacks, that line supermarket shelves? How did our definitions of food and candy come to be so muddled? And how did candy come to be the scapegoat for our fears about the dangers of food? In *Candy: A Century of Panic and Pleasure*, Samira Kawash tells the fascinating story of how candy evolved from a luxury good to a cheap, everyday snack. After candy making was revolutionized in the early decades of mass production, it was celebrated as a new kind of food for energy and enjoyment. Riding the rise in snacking and exploiting early nutritional science, candy was the first of the panoply of "junk foods" that would take over the American diet in the decades after the Second World War—convenient and pleasurable, for eating anytime or all the time. And yet, food reformers and moral crusaders have always attacked candy, blaming it for poisoning, alcoholism, sexual depravity and fatal disease. These charges have been disproven and forgotten, but the mistrust of candy they produced has never diminished. The anxiety and confusion that most Americans have about their diets today is a legacy of the tumultuous story of candy, the most loved and loathed of processed foods. Candy is an essential, addictive read for anyone who loves lively cultural history, who cares about food, and who wouldn't mind feeling a bit better about eating a few jelly beans.

This volume is the second in the series of final reports on the work of the Kavousi Project and the first volume on the cleaning (1982-1984) and excavations (1987-1992) at the mountain sites located above the modern village of Kavousi in eastern Crete. These sites, Vronda and the Kastro, shed light on the Early Iron Age, the transitional period in Cretan history known popularly as the Dark Ages, thereby elucidating the way of life of the people who lived in the area of Kavousi during that period and how their culture changed over time. Kavousi IIA is devoted to the excavation of material from the Late Minoan IIIC settlement at Vronda, particularly the houses on the summit of the Vronda ridge (Buildings A-B, C-D, J-K, and Q), along with earlier (Building P) and later (Building R) structures around them.

Syntactic complexity has always been a matter of intense investigation in formal linguistics. Since complex syntax is clearly evidenced by sentential embedding and since embedding of one clause/phrase in another is taken to signal recursivity of the grammar, the capacity of computing syntactic complexity is of central interest to the recent hypothesis that syntactic recursion is the defining property of natural language. In the light of more recent claims according to which complex syntax is not a universal property of all living languages, the issue of how to detect and define syntactic complexity has been revived with a combination of classical and new arguments. This volume contains contributions about the formal complexity of natural language, about specific issues of clausal embedding, and about syntactic complexity in terms of grammar-external interfaces in the domain of language acquisition.

Viruses are some of the simplest infectious agents on the planet, yet can cause severe and even life-threatening diseases in all forms of life - including humans. Despite relying on host cells in order to replicate, viruses can be capable of extremely rapid reproduction and very effective transmission from one person to another. Because of this, they have historically represented a significant proportion of the disease burden affecting humans. Human Virology provides a vivid introduction to this fascinating field, by incorporating both the molecular and clinical aspects of the subject. Throughout the text, case studies bring the subject to life by providing a unique perspective from real practicing doctors. In addition new 'hot topic' boxes have been incorporated into this edition, featuring current important areas of research. Little prior knowledge is assumed, making Human Virology the perfect text for those students new to the subject.
