Since precious few architectural drawings and no theoretical treatises on architecture remain from the premodern Islamic world, the Timurid pattern scroll in the collection of the Topkapi Palace Museum Library is an exceedingly rich and valuable source of information. In the course of her in-depth analysis of this scroll dating from the late fifteenth or early sixteenth century, Gülru Necipoğlu throws new light on the conceptualization, recording, and transmission of architectural design in the Islamic world between the tenth and sixteenth centuries. Her text has particularly far-reaching implications for recent discussions on vision, subjectivity, and the semiotics of abstract representation. She also compares the Islamic understanding of geometry with that found in medieval Western art, making this book particularly valuable for all historians and critics of architecture. The scroll, with its 114 individual geometric patterns for wall surfaces and vaulting, is reproduced entirely in color in this elegant, large-format volume. An extensive catalogue includes illustrations showing the underlying geometries (in the form of incised “dead” drawings) from which the individual patterns are generated. An essay by Mohammad al-Asad discusses the geometry of the muqarnas and demonstrates by means of CAD drawings how one of the scroll's patterns could be used to design a three-dimensional vault. Now in its seventh edition, Designing with Light introduces readers to the art, craft, and technology of stage lighting and media projection. The new edition is fully updated to include current information on the technology of stage lighting: lighting fixtures, lamps, cabling, dimmers, control boards, as well as electrical theory. Readers will learn how designed light is used to enhance the audience's understanding and enjoyment of a production. The book includes specific information on drafting the light plot, explores the challenges of designing for different stage configurations, and provides examples of lighting designs for dramas, musicals, and dance. It also features comments and thoughts from active designers from both mainstream theatrical productions and related industries. Written for students of Lighting Design and Technology as well as professional technicians and designers, Designing with Light offers a comprehensive survey of the practical and aesthetic aspects of stage lighting design.
