What is computer art? Do the concepts we usually employ to talk about art, such as 'meaning', 'form' or 'expression' apply to computer art? A Philosophy of Computer Art is the first book to explore these questions. Dominic Lopes argues that computer art challenges some of the basic tenets of traditional ways of thinking about and making art and that to understand computer art we need to place particular emphasis on terms such as 'interactivity' and 'user'. Drawing on a wealth of examples he also explains how the roles of the computer artist and computer art user distinguishes them from makers and spectators of traditional art forms and argues that computer art allows us to understand better the role of technology as an art medium.

Recognized by Brandweek as "the dean of the brand-equity movement," David Aaker now prepares managers for the next level of the brand revolution—brand leadership. For the first time, Aaker and coauthor Erich Joachimsthaler describe how the emerging paradigm of strategic brand leadership is replacing the classic, tactically oriented brand management system pioneered by Procter & Gamble. This fundamental shift involves nothing less than a revolution in organizational structure, systems, and culture—as the authors demonstrate with hundreds of case studies from companies such as Polo Ralph Lauren, Virgin Airlines, Adidas, GE, Marriott, IBM, McDonald's, Maggi, and Swatch. This immensely readable book provides the brand management team with the capability to: --Create and elaborate brand identities (what should the brand stand for) --Use the brand relationship spectrum, a powerful tool to harness subbrands and endorsed brands to form brand architectures that create clarity, synergy and leveraged assets --Identify the customer "sweet spot" and the driving idea that will move brand-building efforts beyond advertising to break out of the clutter --Use the Internet and sponsorship to make brands resources work more effectively --Address the four imperatives of global brand management Like David Aaker's two previous bestselling books, Brand Leadership will be essential reading for line executives and brand managers in market-driven firms worldwide.

This is the story of the Audi TT- one of the biggest motoring sensations of the 1990s. Audi's most exciting car since the original Quattro has won plaudits from the moment of its launch, and has remained hugely popular in spite of question marks over the safety of early versions.James Ruppert tells the complete story of the TT roadster and coupe, in all their versions, finding where the design came from, where it is going to and the impact this little big car has had on the motoring world.

The Audi TT is one of the few cars which transcends the automotive world, and is applauded for its design per se. Since its launch in early 1999, the TT has been a spectacular sales success, particularly in the UK and the USA. Quattro four-wheel-drive makes the TT unique amongst the current crop of coupes and roadsters. Nearly six years after it was first unveiled to the press, the car still turns heads, and has inspired a burgeoning aftermarket accessory and tuning industry. This all-color book will fascinate all Audi TT owners and sports car enthusiasts in general.

Jeremy Clarkson gets REALLY riled up in Round the Bend What's it like to drive a car that's actively trying to kill you? This and many other burning questions trouble Jeremy Clarkson as he sets out to explore the world from the safety of four wheels. Avoiding the legions of power-crazed traffic wombles attempting to block highway and byway, he he: - Shows how the world of performance cars may be likened to Battersea Dogs Home - Reveals why St Moritz may be the most bonkers town in all of the world - Reminds us that Switzerland is so afraid of snow that any flakes falling on the road are immediately arrested - Argues that washing a car is a waste of time Funny, globe-trotting, irreverent and sometimes downright rude, Round the Bend is packed with curious and fascinating but otherwise hopelessly useless stories and facts about everything under the sun (and just occasionally cars). It's Jeremy Clarkson at his brilliant best. Praise for Jeremy Clarkson 'Brilliant . . . laugh-out-loud' Daily Telegraph 'Outrageously funny . . . will have you in stitches' Time Out 'Very funny . . . Inhaltsangabe:Abstract: Brands have existed for several hundreds of years. Farmers used to brand their cattle by burning a mark into their fur. Others engraved initials into their valuables. The mark showed who the possession belonged to or where the cattle or goods originated from. This tradition still lives on in the logos, names, symbols and designs companies give to their products and services to distinguish their offers from the others the competitors. From a simple marking of possessions and origin, branding has come a long way. Nowadays, companies invest a great amount of resources into building, maintaining and nurturing their brands. In acquisitions, companies pay a huge amount of money for a brand. Take Nestlé s acquisition of Rowntree, which owns brands like Kit Kat and Smarties, as an example. Nestlé paid five times the net asset value of Rowntree in order to acquire stable brands. Why do companies pay such large sums of money for an invisible asset like a brand? The answer is simple: consumers do the same. Studies showed that consumers pay a far higher price for a product or service of a well-known brand they trust than for a comparable offer from a less well-know brand. Brands make up for a big chunk of a firm s revenues today and make sales predictable. As Internet and mobile communication grows in terms of users and becomes more important in their users lives, brands are unsure of how to handle this new medium in the digital age, since market dynamics have changed. Competition is more fierce, rumours spread worldwide in no time and brands lose emotional touch with their target segment. This change has been facilitated by online and mobile communication of peers. People have always formed peer networks, but today these networks are much more powerful and quicker. Networks of consumers take over and

steal power from established brands. Shell witnessed a worldwide protest against its plans of sinking the oil platform Brent Spar into the North Sea. Consumers avoided Shell stations and supported Greenpeace. Rumours of sweat shops in Asia run by Nike and Reebok have led to loss of face as a result of worldwide protests. On top of these threats, brands have to face the fact that they have no chance fighting these networks of consumers. At the same time, peer networks also open up many opportunities like a customized and personalized approach to every individual. At the beginning of last century, the owner of a general store knew [...]

The study of varieties of capitalism is moving on from the analysis of static national types to embrace local and sectoral diversity and the study of systems in the process of major change.

This volume addresses the issue by examining four localised sectors, comparing a German case with one in another European country. The general changes taking place in Germany itself and the other countries (Hungary, Sweden, and the UK) form the context of the studies.

The case studies concern: * Furniture making in North-Rhine Westphalia and southern Sweden, * Automotive manufacture in east Germany and northern Hungary, * Biotechnology around Munich and Cambridge, * TV programme and film-making in Cologne and central London.

The studies find a complex pattern of conformity with, and deviation from, national types, but only occasional examples of where divergence takes the form of a direct confrontation with a national model. This is partly because national models are themselves changing; partly because they are often capable of accommodating more diversity than is often assumed by national studies; and partly because firms are increasingly able to reach outside their national boundaries for institutional resources.

"Wise, witty, readable, and very, very useful. A tour de force from the world's leading authority on branding." —Anthony Hopwood, Said Business School, Oxford Brands are a cultural phenomenon of our time. Yet, whether praised or derided, they have suffered from a critical debate characterized by routine thinking, glib assumptions, or mere prejudice. Wally Olins draws on a lifetime of marketing experience to explain why it is time to throw the old mission statements away, what happens when a brand goes global, when we shouldn't automatically assume that the customer comes first, and how it might be good news that branding is set to spread even further. Above all, Olins provides a positive rejoinder to the new orthodoxies of the "No Logo" critics of branding by showing how they confuse their views about brands with their views about capitalism. As he argues, brands are no longer just about corporations, products, and services. In fact, all the significant institutions in our lives—the towns, cities, regions, or countries in which we live, our sports teams and museums, our consumer groups and charities—are given strength, identity, a defining role, and a satisfying cohesion via branding, one of the most significant social—as well as business—developments of modern times. Always wise, questioning, and iconoclastic, Wally Olins takes us to the literal heart of the matter: our crucial neglect of the way in which consumer decisions about brands are as emotional as all the other important decisions in our lives. For everyone in marketing, advertising, design, and business, and for anyone who wants to understand how the world works in the early twenty-first century, this is one of those rare books that breaks the mold.

"This book provides a fresh perspective on growth and innovation, at a time where many are struggling to improve results in a sustained, high impact manner"--
