In present-day Africa chiefs interact fluently with modern states, international organizations, and business corporations, and traditional chieftaincy is perceived essentially as a secular institution. Consequently, social scientists have started paying serious attention to the role of traditional authorities in contemporary political landscapes. Yet it was only a few decades ago that classic ethnographers were characterizing chiefs as priests, magicians, diviners, rainmakers, and the like. What happened to the divinity of African chiefs and kings? Drawing on his research on the Asante people of Ghana, West Africa, Timo Kallinen explores how the colonial and postcolonial states have attempted to secularize the sacred institutions of chiefship and kingship, a process which is by no means complete. Furthermore, it has frequently proved a problematic undertaking with regards to a number of burning issues in contemporary Ghanaian society, such as Pentecostal-Charismatic Christianity, nationalism, international development aid, civil society participation, coup d'états, and witchcraft.

Debian GNU/Linux, a very popular non-commercial Linux distribution, is known for its reliability and richness. Built and maintained by an impressive network of

thousands of developers throughout the world, the Debian project is cemented by its social contract. This foundation text defines the project's objective: fulfilling the needs of users with a 100% free operating system. The success of Debian and of its ecosystem of derivative distributions (with Ubuntu at the forefront) means that an increasing number of administrators are exposed to Debian's technologies. This Debian Administrator's Handbook, which has been entirely updated for Debian 8 “Jessie”, builds on the success of its 6 previous editions. Accessible to all, this book teaches the essentials to anyone who wants to become an effective and independent Debian GNU/Linux administrator. It covers all the topics that a competent Linux administrator should master, from installation to updating the system, creating packages and compiling the kernel, but also monitoring, backup and migration, without forgetting advanced topics such as setting up SELinux or AppArmor to secure services, automated installations, or virtualization with Xen, KVM or LXC. This book is not only designed for professional system administrators. Anyone who uses Debian or Ubuntu on their own computer is de facto an administrator and will find tremendous value in knowing more about how their system works. Being able to understand and resolve problems will save you invaluable time. Learn more about the book on its official website: debian-handbook.info

Acquiring Eyes directs incisive but at the same time admiring attention to H. R. Ocampo, Lino Brocka, Ishmael Bernal, and Emmanuel Garibay--four masters, the original and complex visuality of whose genre-specific efforts to parlay Philippine social dynamics into visual practices of engagement, struggle, and transcendence have produced for each of them a much-deserved and committed local following.

Patrick thinks he's hit the jackpot landing an interview with the eccentric billionaire tech mogul Ezra Maes. But while the celebrity deer is charming and brilliant, Pat wasn't expecting something both men had in common: a desire for Pat's lovely girlfriend Nightshade. Ever eager to please his lover, and curious to explore new frontiers in the bedroom, Pat suggests Nightshade start up a relationship - not with Ezra, but rather his sex-hungry alter ego Buck. Has this new phase of Pat and Night's relationship also become their last? Based on the comics and characters by the artist Kadath. Cover, interior illustrations, and gallery by Kadath.

This book examines present developments and the future possibilities of deep brain stimulation therapy for patients with therapy-refractory psychiatric disorders. Presents clinical applications and animal research, and offers a chapter on ethical issues.

A Buddhist Kaleidoscope: Essays on the Lotus Sutra examines what many consider to be the highest teaching of the historical Buddha Shakyamun. Buddhist Kaleidoscope brings together essays on the Lotus Sutra by an international assembly of Buddhist scholars, taking into account historic and modern reflections on the Lotus Sutra. Discussions in the book range from "The Lotus Sutra and the Dimension of Time" to "The Lotus Sutra and Health Care Ethics." One essay considers the Lotus Sutra in relation to social obligations, while others regard feminist and paternalist readings. In his introduction, editor Gene Reeves says he tried to include the broadest possible diversity of views, offering a complete vision of this important Buddhist scripture.

Attachment theory is influencing how we understand interpersonal relationships and how psychotherapy can help facilitate change for those struggling in relationships. More recently, researchers and clinicians have applied attachment theory to group treatment, one of the most effective forms of psychotherapy to address interpersonal difficulties. This book highlights some of the bridges between attachment theory and contemporary approaches to group treatment. In addition to applying attachment theory to innovative treatments, each chapter addresses a specific way in which attachment impacts the members' capacity for empathy and perspective taking; the development of cohesion in the group; the

automatic fight-flight response during group interactions; members' ability to tolerate diversity; and the leaders' capacity to foster safety within the group. This book will help group leaders gain a richer understanding of attachment theory and attachment based techniques that will ultimately benefit their groups. This book was originally published as a special issue of the International Journal of Group Psychotherapy.

Twelve Years a Slave (1853) is a memoir and slave narrative by Solomon Northup, as told to and edited by David Wilson. Northup, a black man who was born free in New York, details his kidnapping in Washington, D.C. and subsequent sale into slavery. After having been kept in bondage for 12 years in Louisiana by various masters, Northup was able to write to friends and family in New York, who were in turn able to secure his release. Northup's account provides extensive details on the slave markets in Washington, D.C. and New Orleans and describes at length cotton and sugar cultivation on major plantations in Louisiana.

This book is an effective teaching tool that raises a number of theoretical & methodological issues regarding the study of criminal events.

Each year, Americans consume hundreds of food products that contain truly dangerous compounds, including heavy metals, pesticides, and other harmful additives--with the blessing of the FDA. Why is this happening and why haven't you heard about it? In *Unsafe at Any Meal*, Dr. Renee Dufault, former food investigator for the Food and Drug Administration, provides the startling answers. While at the FDA, Dr. Dufault discovered that mercury--a highly toxic metal--was contaminating the plumbing systems of many food manufacturing plants. Upon

further examination, she discovered that the same mercury was also evident in a number of processed foods commonly sold in supermarkets. When Dr. Dufault revealed these disturbing findings to her superiors, she was told to stop her investigation. Her continued efforts to raise the issue always met with a dead end, so she chose to take an early retirement from the FDA. Dr. Dufault then devoted her energy to making the public aware of the insidious dangers that contaminate our food. In 2010, she founded an organization of scientists to study the scope of this problem and has published numerous research articles on the topic with little fanfare. To expose what still seems to be a well-kept secret by the FDA, she has written *Unsafe at Any Meal* to provide consumers with the information they need to know. The book begins with the author's story leading up to the creation of this work. It then describes the various toxic substances that are most commonly found in our food supply, and explains how they affect your genes, health, and the surrounding environment. After examining the Standard American Diet, which is sorely lacking in disease-preventing nutrients, it discusses the country's trend toward consuming a skyrocketing amount of ingredients that can contain heavy metals. It further shows how exposure to these heavy metals can contribute to conditions such as ADHD or autism. Also included is a helpful guide to reading food labels, recognizing misleading marketing tactics, and knowing what to look for--and what to look out for--in the aisles of your grocery store. Over fifty years ago, Rachel Carson's book *Silent Spring* exposed the dangers of DDT in our food supply. Unfortunately, it seems that the problem of food contamination has actually become worse. Backed by research and first-hand experience, Dr. Dufault reveals how the FDA has failed us, and outlines how you can protect yourself and your family by knowing what to avoid and by filling your kitchen with food that is clear of toxins.

Foreword by Eugene H. Peterson One of the most widely read and highly acclaimed religious books over the past twenty-five years, *God of Surprises* takes readers on a spiritual journey of discovery and change. Jesus said, The kingdom of heaven is like a treasure hidden in a field. This book aims to suggest ways of finding that treasure in what we may consider a most unlikely field - ourselves. *God of Surprises* has much to say to those who have a love-hate relationship with the church to which they are connected. This edition contains a new preface by Gerard Hughes in which he shares how he came to write the book, what it has meant to him personally, and his hopes for it in the future.

Claims against insurers have multiplied over the past few decades, as have the strategies of plaintiffs. Extra-Contractual Litigation Against Insurers is a comprehensive guide to new theories used in insurance litigation. It examines both the legal underpinnings of novel causes of action and the practical aspects of bringing claims and defending against them. Topics covered include: the insurer's third-party bad faith in refusing to settle; first-party bad faith in refusing to pay benefits; bad faith claims involving specific lines of insurance; common law claims; unfair claims settlement practices; alternative theories of liability, such as unjust enrichment; and more. The authors provide a detailed discussion of trial tactics, covering each phase of trial from commencing an action through discovery, evidentiary rulings, jury instructions, verdict and damages. Extra-Contractual Litigation Against Insurers provides insights on strategies that will benefit all practitioners in this area. No matter which side you're on, this book will help you assess the viability of a claim and represent your clients effectively.

Often when a religious minority challenges mainstream customs, the phrase “reasonable accommodation” is at the centre of the ensuing debate. But does reasonable accommodation achieve its goal of integrating the rights of religious minorities with those of mainstream society, or does it really emphasize inequality? Reasonable Accommodation seeks to define the meaning of this phrase and to provide a much-needed critical assessment of its use within Canada and abroad. Woven throughout is commentary about whether there really is a religious majority in Canada, how the idea of “shared values” obscures debate, and how tolerating religious differences simply isn’t enough to guarantee equality.

"This sobering description of many computer-related failures throughout our world deflates the hype and hubris of the industry. Peter Neumann analyzes the failure modes, recommends sequences for prevention and ends his unique book with some broadening reflections on the future." —Ralph Nader, Consumer Advocate This book is much more than a collection of computer mishaps; it is a serious, technically oriented book written by one of the world's leading experts on computer risks. The book summarizes many real events involving computer technologies and the people who depend on those technologies, with widely ranging causes and effects. It considers problems attributable to hardware, software, people, and natural causes. Examples include disasters (such as the Black Hawk helicopter and Iranian Airbus shootdowns, the Exxon Valdez, and various transportation accidents); malicious hacker attacks;

outages of telephone systems and computer networks; financial losses; and many other strange happenstances (squirrels downing power grids, and April Fool's Day pranks). Computer-Related Risks addresses problems involving reliability, safety, security, privacy, and human well-being. It includes analyses of why these cases happened and discussions of what might be done to avoid recurrences of similar events. It is readable by technologists as well as by people merely interested in the uses and limits of technology. It is must reading for anyone with even a remote involvement with computers and communications—which today means almost everyone. Computer-Related Risks: Presents comprehensive coverage of many different types of risks Provides an essential system-oriented perspective Shows how technology can affect your life—whether you like it or not!

Nature can be a great source of inspiration for artificial intelligence algorithms because its technology is considerably more advanced than our own. Among its wonders are strong AI, nanotechnology, and advanced robotics. Nature can therefore serve as a guide for real-life problem solving. In this book, you will encounter algorithms influenced by ants, bees, genomes, birds, and cells that provide practical methods for many types of AI situations. Although nature is the muse behind the methods, we are not duplicating its exact processes. The complex behaviors in nature merely provide inspiration in our quest to gain new insights about data. Artificial Intelligence for Humans is a book series meant to teach AI to those readers who lack an extensive

Despite the growing interest in security amongst governments, organizations and the general public, the provision of much security is substandard. This book explores the problems facing security, and sets out innovative proposals to enhance the effectiveness of security in society, at national and organizational levels.

The second edition of Security Operations Management continues as the seminal reference on corporate security management operations. Revised and updated, topics covered in depth include: access control, selling the security budget upgrades to senior management, the evolution of security standards since 9/11, designing buildings to be safer from terrorism, improving relations between the public and private sectors, enhancing security measures during acute emergencies, and, finally, the increased security issues surrounding the threats of terrorism and cybercrime. An ideal reference for the professional, as well as a valuable teaching tool for the security student, the book includes discussion questions and a glossary of common security terms. Additionally, a brand new appendix contains contact information for academic, trade, and professional security organizations. * Fresh coverage of both the business and

This book engages readers in thirteen conversations presented by authors from around the world regarding the role that textbooks play in helping readers imagine membership in the nation. Authors' voices come from a variety of contexts – some historical, some contemporary, some providing analyses over time. But they all consider the changing portrayal of diversity, belonging and exclusion in multiethnic and diverse societies where silenced, invisible, marginalized members have struggled to make their voices heard and to have their identities incorporated into the national narrative. The authors discuss portrayals of past exclusions around religion, ethnicity, sexual orientation, as they look at the shifting boundaries of insider and outsider. This book is thus about “who we are” not only demographically, but also in terms of the past, especially how and whether we teach discredited pasts through textbooks. The concluding chapters provides ways forward in thinking about what can be done to promote curricula that are more inclusive, critical and positively bonding, in increasingly larger and more inclusive contexts.

This book examines the shifting portrayal of the nation in school textbooks in 14 countries during periods of rapid political, social, and economic change. Drawing on a range of analytic strategies, the authors examine history and civics textbooks, and the

teaching of such texts, along with other prominent curricular materials—children’s readers, a required text penned by the head of state, a holocaust curriculum, etc.. The authors analyze the uses of history and pedagogy in building, reinforcing and/or redefining the nation and state especially in the light of challenges to its legitimacy. The primary focus is on countries in developing or transitional contexts. Issues include the teaching of democratic civics in a multiethnic state with little history of democratic governance; shifts in teaching about the Khmer Rouge in post-conflict Cambodia; children’s readers used to define national space in former republics of the Soviet Union; the development of Holocaust education in a context where citizens were both victims and perpetrators of violence; the creation of a national past in Turkmenistan; and so forth. The case studies are supplemented by commentary, an introduction and conclusion.

This book covers all elements of parties and the electoral process, including local, state, and national party organizations; American party history and party systems; state and local nominations; state and local elections; presidential nominations; and presidential elections. Separate chapters are devoted to the important subjects of the media in the electoral process and campaign finance. The role of political parties in representative democracy_and their contributions to it_are examined critically. This post-election update includes complete data from 2008 and an updated chapter on campaign finance.

Janey, the world would be a better place.' - Ben Fogle In 2014 and in her mid-twenties, Janey Lowes had been a vet for just two years when she left her home in County Durham and went travelling. Visiting Sri Lanka, she was horrified to see the state of so many of the island's dogs, in particular the three million strays. Over 5,000 miles from home, Janey decided there and then that she was going to move to the island indefinitely and do everything within her power to help them. She raised £10,000 to get started, setting up a charity called WECare Worldwide, and began work. Frightened, determined and excited all at the same time, she found a local who was willing to work with her and began scouring the streets for dogs in need. Some she patched up as best she could at the roadside, others she brought back and treated in a makeshift surgery she had cobbled together in her new home. With very little equipment, she and her small team came up with new and ingenious ways to treat the animals. In this highly inspiring and heartfelt book full of challenges and adventure, Janey introduces us to her world and the tireless work she carries out. As she says, 'I feel as though all these dogs are my dogs and I have a responsibility to them.' In it, we meet many of the colourful characters who have come to offer help, along with innumerable street dogs who have suffered all sorts of trauma and injury, only to be scooped up by Janey and her team and saved.

Anthony Vidler interprets contemporary buildings and projects in light of the resurgent interest in the uncanny as a metaphor for a fundamentally "unhomely" modern condition. The Architectural Uncanny presents an engaging and original series of meditations on issues and figures that are at the heart of the most pressing debates surrounding architecture today.

are at once historical—serving to situate contemporary discourse in its own intellectual tradition and theoretical—opening up the complex and difficult relationships between politics, social thought, and architectural design in an era when the reality of homelessness and the idealism of the neo-avant-garde have never seemed so far apart. Vidler, one of the deftest and surest critics of the contemporary scene, explores aspects of architecture through notions of the uncanny as they have been developed in literature, philosophy, and psychology from the beginning of the nineteenth century to the present. He interprets the unsettling qualities of today's architecture—its fragmented neo-constructivist forms reminiscent of dismembered bodies, its "seeing walls" replicating the passive gaze of domestic cyborgs, its historical monuments indistinguishable from glossy reproductions - in the light of modern reflection on questions of social and individual estrangement, alienation, exile, and homelessness. Focusing on the work of architects such as Bernard Tschumi, Rem Koolhaas, Peter Eisenman, Coop Himmelblau, John Hejduk, Elizabeth Diller, and Ricardo Scofidio, as well as theorists of the urban condition, Vidler delineates the problems and paradoxes associated with the subject of domesticity.
