This volume takes an in-depth look at the problems and practices involved in conducting formative assessments in middle school mathematics classrooms. In these chapters, researchers and teachers identify the challenges teachers faced as they attempted to implement new assessment procedures, moving from more traditional methods to an emphasis in the quality of student work. This authoritative book: Documents the shift from traditional ways of judging student performance (tests to measure what students know) to reform notions of mathematical literacy (documenting students' growth in understanding specific content domains); Discusses four key steps in the change process that helped teachers to accomplish the necessary shift in assessment practices. Includes two chapters written by teachers that describe their personal experiences with implementing these new practices in the classroom and

In this second edition of *Improving Student Learning One Teacher at a Time*, Jane E. Pollock and Laura J. Tolone combine updated research and real-world stories to demonstrate how it takes only one teacher to make a difference in student performance. Their approach expands the classic three-part curriculum-instruction-assessment framework by adding one key ingredient: feedback. This "Big Four" approach offers an easy-to-follow process that helps teachers build better curriculum documents with

- * Curriculum standards that are clear and well-paced, and describe what students will learn.
- * Instruction based in research, from daily lessons to whole units of study.
- * Assessment that maximizes feedback and requires critical and creative thinking.
- * Feedback that tracks and reports individual student progress by standards.

Pollock and Tolone demonstrate how consistent, timely feedback from multiple sources can help students monitor their own understanding and help teachers align assignments, quizzes, and tests more explicitly to the standards. The Big Four shifts the focus away from the basics of what makes a good teacher toward what makes good learning happen for every student every day.

Research has shown that algebra is the doorway and gateway for future success of students in many aspects, including high school graduation, attending and success in college, and professional earning power. And the most important key to students' success in algebra is their readiness. This book is not only a program that addresses algebra readiness; it is also a fundamental reform effort, based on the National Mathematics Advisory Panel's (NMAP's) Final Report (spring, 2008). The book approaches mathematic skills deficiencies on an individual basis, much like an IEP addresses the individual needs of a student with disabilities. The Reaching Algebra Readiness (RAR) process consists of four components: (1) Diagnostic, assessing student's mastery of the skills needed to take algebra; (2) Prescriptive, developing an individualized plan to address specific math deficiencies; (3) Intervention, utilizing tools and resources (parental involvement, effective teaching strategies, etc), to improve students' mathematics skills; and (4) Drills and Effective Teachings Strategies, mathematics is a discipline and, simply, there is no way of avoiding practice and drilling in reaching algebra readiness, which can be enhanced significantly by implementing proven effective teaching strategies. The Reaching Algebra Readiness (RAR) process and the related materials presented in this book will be revolutionary in helping all students acquire the math skills needed for success in

Unit testing. You've heard the term. Probably a lot. You know you should probably figure out how it works, since everyone's always talking about it and a lot of companies require developers to know it. But you don't really know it and you're worried that you'll look uninformed if you cop to not knowing it. Well, relax. This book assumes you have absolutely no idea how it works and walks you through the practice from the very beginning. You'll learn the basics, but more importantly, you'll learn the business value, the path to walk not to get frustrated, what's testable and what isn't, and, and everything else that a practical unit testing newbie could possibly want to know.

Education for this generation's youth is the key for our nation's future well-being but it is now threatened by political correctness. that political correctness must be challenged on many issues in our school system, so that our children have a better chance for learning well and then living well. This book's focus is on using accountability to pressure the system toward implementing reforms necessary for winning. It deals with educational policies, which are controversial and also identified by others for being problematic, rather than classroom practices. The solutions, or recommendations, proposed are intended to ensure that policies align with the best interests of students, parents, and taxpayers rather than with those of the service providers.

Grounded in the constructivist inquiry approach to science teaching and learning, *Essentials of Science Classroom Assessment* bridges science assessment research and practice, and connects science assessment and learning. this book, the chapter authors and I bring the particular state history tests more to the fore and examine how teachers are responding to them. At the heart of *Measuring History* are cases of classroom teachers in seven states (Florida, Kentucky, Michigan, New York, Texas, Mississippi, and Virginia) where new social studies standards and new, and generally high-stakes, state-level history tests are prominent. In these chapters, the authors describe and analyze the state's testing efforts and how those efforts are being interpreted in the context of classroom practice. The results both support and challenge prevailing views on the efficacy of testing as a vehicle for educational reform. Catherine Horn (University of Houston) and I lay the groundwork for the case studies through a set of introductory chapters that examine the current environment, the research literature, and the technical qualities of history tests.
