Asterix and Obelix's drunken chieftain, Maragmhòraix, sends them on a mission to Rome to fulfill a stupid bet. Their task is to come home with Caesar's laurel wreath to garnish a bowl of soup. But this is an increasingly difficult mission and doomed to failure, until fate plays a jealous hand.

How much do you know about Greek architecture? Roman? Gothic? The Renaissance? Modernism? Perhaps more importantly, do you know how these are connected or how one style evolved to become another? Or what happened historically during each of these periods? Architectural History Retold is your roadmap for your journey through architectural history. Offering a fresh take on what the author calls the 'Great Enlightenment project', it traces the grand narrative of western architecture in one concise, accessible volume. Starting in Ancient Greece and leading up to the present day, Paul Davies' unconventional, engaging style brings the past back to life, helping you to think beyond separate components and styles to recognise 'the bigger picture'. The author is an academic and journalist with three decades of experience in introducing students to architectural history. The book is based on his successful entry-level course which has used the same unstuffy approach to break down barriers to understanding and engagement and inspire generations of students.

"A joyful celebration of fan love. Unofficial episode guides don't come much more engaging than this." —Benjamin Cook, co-author of Doctor Who: The Writer's Tale Doctor Who was already the world's longest-running science fiction series when it returned in 2005 to huge success. Enormously popular, the BBC show encompasses multiple other genres, from horror to comedy to action and historical adventure, and is loved for its uniquely British wit and clever scripting. Its hero, its monsters, and even its theme song have become pop culture icons. In this volume covering six seasons of the new series, two Doctor Who experts provide insights into everything from the history of the show, including Daleks, Cybermen, and the eight Classic Series Doctors, to a detailed episode guide. As Neil Gaiman complained to the authors, "I have just lost four hours to your blasted book. And I only meant to glance at it." Allons-y!

In film imagery, urban spaces show up not only as spatial settings of a story, but also as projected ideas and forms that aim to recreate and capture the spirit of cultures, societies and epochs. Some cinematic cities have even managed to transcend fiction to become part of modern collective memory. Can we imagine a futuristic city not inspired at least remotely by Fritz Lang's Metropolis? In the same way, ancient Babylon, Troy and Rome can hardly be shaped in popular imagination without conscious or subconscious references to the striking visions of Griffiths' Intolerance, Petersen's Troy and Scott's Gladiator, to mention only a few influential examples. Imagining Ancient Cities in Film explores for the first time in scholarship film representations of cities of the Ancient World from early cinema to the 21st century. The

volume analyzes the different choices made by filmmakers, art designers and screen writers to recreate ancient urban spaces as more or less convincing settings of mythical and historical events. In looking behind and beyond intended archaeological accuracy, symbolic fantasy, primitivism, exoticism and Hollywood-esque monumentality, this volume pays particular attention to the depiction of cities as faces of ancient civilizations, but also as containers of moral ideas and cultural fashions deeply rooted in the contemporary zeitgeist and in continuously revisited traditions.

In this textbook the authors present first-year geometry roughly in the order in which it was discovered. The first five chapters show how the ancient Greeks established geometry, together with its numerous practical applications, while more recent findings on Euclidian geometry are discussed as well. The following three chapters explain the revolution in geometry due to the progress made in the field of algebra by Descartes, Euler and Gauss. Spatial geometry, vector algebra and matrices are treated in chapters 9 and 10. The last chapter offers an introduction to projective geometry, which emerged in the 19th century. Complemented by numerous examples, exercises, figures and pictures, the book offers both motivation and insightful explanations, and provides stimulating and enjoyable reading for students and teachers alike.

How healthy were people in ancient Greece and Rome, and how did they think about maintaining and restoring their health? For students of classics, history or the history of medicine, answers to these and many previously untouched questions are dealt with by renowned ancient historians, classical scholars and archaeologists. Using a multidisciplinary approach, the contributors assess the issues surrounding health in the Greco-Roman world from prehistory to Christian late antiquity. Sources range from palaeodemography to patristic and from archaeology to architecture and using these, this book considers what health meant, how it was thought to be achieved, and addresses how the ancient world can be perceived as an ideal in subsequent periods of history. The first of its kind, this annotated guide describes and evaluates more than 400 works in English. Rothschild's lively annotations discuss important features of each work-including the quality of the graphics, characterizations, dialogue, and the appropriate audience-and introduces mainstream readers to the variety and quality of graphic novels, helps them distinguish between classics and hackwork, and alerts experienced readers to material they may not have discovered. Designed for individuals who need

information about graphic novels and for those interested in acquiring them, this book will especially appeal to librarians, booksellers, bookstore owners, educators working with teen and reluctant readers, as well as to readers interested in this genre. This book addresses two countervailing challenges to theory and policy in law and economics. The first is the rise of legal origins theory, which denies the comparative law view of convergence between common law and civil law by the assertion of an economic superiority of common law. The second is the series of economic crises in the very financial markets on which that assertion was based. Both trends unsettled certainties about the rule of law and institutional economics. Meeting legal origins theory in its main areas of political science, sociology and economics, the book extends the interdisciplinary reach to neglected aspects of comparative law, legal history, dynamic econometric analysis and "quasi-natural experiments" with counterfactual evidence of different institutional regimes in divided countries. These combined methodological tools make tests of the economic impact of different legal origins much more reliable. This is shown for developed and newly industrialized countries as well as developing, transforming and emerging countries with or without financial center advantage, affected or not by financial crises. The Asian financial crises and the American subprime crisis have been, or could have been resolved using the resources of common law or civil law. These cases and data on access to justice in Africa, Asia and Latin America reveal the problem of substantive law remaining "law on the books" without efficient procedural rules and judicial structures. The single most striking common law-civil law divide is that lawyer-dominated common law procedure is slower and costlier than judge-managed civil law procedure. Countries as diverse as the Netherlands, Japan, and China show functional interaction between culture and law in legal reforms. Such interaction can reduce the occurrence of legal disputes as well as facilitate their resolution. It can use economic crises as catalysts for legal reforms or rely on regional integration, and it should replace the discredited method of legal "transplants" by sustained dialogue between legal advisors and all actors involved in legal reforms.

At night Armand lay in bed with a sadness in his heart that ballooned until there was room for nothing else. He thought with horror of the lying-down room . . . Paris; in the stifling August heat, Commandant Serge Morel is called to a disturbing crime scene. An elderly woman has been murdered to the soundtrack of Faure's Requiem, her body then grotesquely displayed. At first this strange case seems to offer few clues; and Morel has problems of his own. His father - always a great force in his life - is beginning to

succumb to senility; and he is unsettled by the reappearance of the beautiful Mathilde, the woman he once loved. Only origami can help calm the detective and focus his thoughts on this troubling crime. As the investigation progresses, the key suspects to emerge are a middle-aged man and a mute teenage boy who have been delivering religious pamphlets in the city's suburbs. But as more elderly ladies are targeted, Morel will find his enquiries leading him back into the past, from the French countryside to Soviet Russia - and to two young boys with the most terrible of stories to tell . . . An evocative, gripping crime novel with an aching heart: *The Lying-Down Room* is the stunning first novel in Anna Jaquiere's Commandant Morel series; perfect for fans of Michael Dibdin and Donna Leon.

These 15 essays investigate comic books and graphic novels, beginning with the early development of these media. The essays also place the work in a cultural context, addressing theory and terminology, adaptations of comic books, the superhero genre, and comic books and graphic novels that deal with history and nonfiction. By addressing the topic from a wide range of perspectives, the book offers readers a nuanced and comprehensive picture of current scholarship in the subject area.

It's a disaster - the druid Getafix has broken his golden sickle. Asterix and Obelix go to Lutetia (now Paris) to buy him a new one. Soon they are tangling with the criminal underworld of the big city - can they outwit Navishtrix, Clovogarlix and the sickle-trafficking gang? Will Getafix ever be able to brew magic potion again?

When thinking about the Mediterranean, Fernand Braudel's haunting words resound like an echo of the sea and its millenary history. From Prehistory until today, the Mediterranean has been setting, witness and protagonist of mythical adventures, of encounters with the Other, of battles and the rise and fall of cultures and empires, of the destinies of humans. Braudel's appeal for a long *durée* history of the Mediterranean challenged traditional views that often present it as a sea fragmented and divided through periods. This volume proposes a journey into the bright and dark sides of the ancient Mediterranean through the kaleidoscopic gaze of artists who from the Renaissance to the 21st century have been inspired by its myths and history. The view of those who imagined and recreated the past of the sea has largely contributed to the shaping of modern cultures which are inexorably rooted and embedded in Mediterranean traditions. The contributions look at modern visual reinterpretations of ancient myths, fiction and history and pay particular attention to the theme of sea travel and travellers, which since Homer's *Odyssey* has become the epitome of the discovery of new worlds, of cultural exchanges and a metaphor of personal developments and metamorphoses.

Wonder Woman. Asterix the Gaul. Watchmen. These popular comics, and many others, use classical sources, narrative patterns, and references to enrich their imaginative worlds and deepen the stories they present. This volume explores that rich interaction. *Son of Classics and Comics* presents thirteen original studies of representations of the ancient world in the medium of comics. Building on the foundation established by their groundbreaking *Classics and Comics* (2011), George Kovacs and C. W. Marshall have gathered a wide range of essays with a new, global perspective. Chapters are helpfully grouped to facilitate classroom use, with sections on receptions of Homer, on manga, on Asterix, and on the sense of a "classic" in the modern world. All Greek and Latin passages are translated. Lavishly illustrated, the volume significantly widens the range of available studies on the reception of the Greek and Roman worlds in comics, and deepens our understanding of comics as a literary medium. *Son of Classics and Comics* will appeal to students and scholars of classical reception as well as comics fans.

European comic authors produced a steady stream of comic material throughout the twentieth century, but gained the world's notice in 1975 when the French magazine *Metal Hurlant* was founded. A new generation of artists and writers had begun. Soon publishers were producing translations of the new comics into other languages, including English, and comics creators everywhere were inspired to innovation. This is a reference work, arranged by artist or writer, to European comics from the last quarter of the twentieth century that have been translated from any European language into English. It contains a variety of material, from the innocent imperialism of Herge's *Tintin* to the sadistic murder for hire in Bernet's *Torpedo*. Albums by a single creator or artist-and-writer team of European origin are the focus; comics in periodicals and anthologies with multiple contributors are excluded. Each entry provides a plot abstract and various notes about the original comic. An author index provides brief biographical information. There is a comprehensive general index.
