Hellenistic astrology is a tradition of horoscopic astrology that was practiced in the

Mediterranean region from approximately the first century BCE until the seventh century CE. It is the source of many of the modern traditions of astrology that still flourish around the world today, although it is only recently that many of the surviving texts of this tradition have become available again for astrologers to study. Hellenistic Astrology: The Study of Fate and Fortune is one of the first comprehensive surveys of this tradition in modern times. The book covers the history, philosophy, and techniques of ancient astrology, with a special focus on demonstrating how many of the fundamental concepts underlying the practice of western astrology originated during the Hellenistic period.

J.P. Morgan once famously remarked, “Millionaires don’t have astrologers. Billionaires do.” For modern business professionals, the idea that what’s in the stars might have some bearing on the very cut-and-dried, numbers-dominated corporate environment may seem pretty “out there.” But time and time again, the science of astrology has been shown to provide uncanny insight into timing and trends. This book examines the accomplishments of hundreds of business greats—from Walt Disney to Oprah Winfrey to Bill Gates—through the remarkable and surprising lens of astrology. Signs of Success gives all readers, be they astrological doubters, dilettantes, or devotees, a practical and entertaining overview of the many applications of astrology to business endeavors. The book provides an analysis of the 12 zodiacal business personality types, and fascinatingly recounts how an understanding of the stars has affected landmark

business events throughout history. Witty, wise, and practical, this delightful book shows readers that when it comes to real-world business and leadership, the sky truly is the limit.

There are times when people just can't identify with the attributes of their Sun or Moon sign. In fact, they may feel that they are an antithesis of their zodiac sign. You may also have observed it. Your Leo friend may not seek attention, may be because he or she has a Capricorn ascendant. Your Sagittarius friend is very possessive, may be because he or she has a Scorpio Ascendant. It is easy to understand why some people do not correspond to their Sun or Moon signs once you know about what is the rising sign or Ascendant in a horoscope. Ascendant is the degree of the zodiac sign that was highest on the Eastern horizon at the time and place of birth. When seen from Earth, the sky seems to move, so the entire zodiac can be observed in a span of 24 hours day which means the rising sign changes on the Eastern horizon every 2 hours because there are 12 zodiac signs. People tend to associate their physical, emotional and spiritual attributes more with rising sign at times.

An illuminating look at the surprising history and science of astrology, civilization's first system of algorithms, from Babylon to the present day. Humans are pattern-matching creatures, and astrology is the universe's grandest pattern-matching game. In this refreshing work of history and analysis, data scientist Alexander Boxer examines classical texts on astrology to expose its underlying scientific and mathematical framework. Astrology, he argues, was the ancient world's most ambitious applied mathematics problem, a monumental data-analysis enterprise sustained by some of history's most brilliant minds, from Ptolemy to al-Kindi to Kepler. Thousands of years ago, astrologers became the first to stumble upon the powerful storytelling possibilities inherent in numerical data. To correlate the configurations of the cosmos with our day-to-day lives, astrologers relied upon a "scheme of heaven," or horoscope, showing the precise configuration of the planets at a particular instant in time as viewed from a particular place on Earth. Although recognized as pseudoscience today, horoscopes were once considered a cutting-edge scientific tool. Boxer teaches us how to read these esoteric charts—and appreciate the complex astronomical calculations needed to generate them—by diagramming how the heavens appeared at important moments in astrology's history, from the assassination of Julius Caesar as viewed from Rome to

the Apollo 11 lunar landing as seen from the surface of the Moon. He then puts these horoscopes to the test using modern data sets and statistical science, arguing that today's data scientists do work similar to astrologers of yore. By looking back at the algorithms of ancient astrology, he suggests, we can better recognize the patterns that are timeless characteristics of our own pattern-matching tendencies. At once critical, rigorous, and far ranging, *A Scheme of Heaven* recontextualizes astrology as a vast, technological project—spanning continents and centuries—that foreshadowed our data-driven world today.

concepts that helps make the wisdom of the cosmos accessible to everyone. Better understand how your stars align with The Complete Guide to Astrology. Illustrates how aspects can offer a profound depiction of an individual and his or her destiny. • Contains comprehensive sections full of interpretations for every planetary combination. • Concepts are explained through the use of actual birth charts and diagrams. • A core textbook at the Faculty of Astrological Studies in London. Aspects are an essential piece of the astrological puzzle when it comes to interpreting and using the information that astrology can give us. It is not enough to know the placement of the planets on the horoscope. It is the relationships between the stars and planets that let us grasp the destiny of the individual. Aspects describe the drama of our lives--the complex configurations that influence what will happen to us over time. Sue Tompkins, a fellow of the Faculty of Astrological Studies in London, shows how to interpret aspects when doing daily astrological readings. She uses the lives of real people to plot the aspects and offers examples of every possible planetary combination. Detailing the influence of oppositions, trines and elemental trines, and cardinal, mutable, and fixed crosses, Tompkins shows how aspects provide the energy in the chart that transforms the horoscope into something symbolizing an alive and vital human being. With Aspects in Astrology, Tompkins provides both the novice and the experienced astrologer the evidence and concrete methods needed to grasp the vast knowledge offered to us by our horoscope.

Jyotish, or Indian astrology, is an ancient and complex method of exploring the nature of time and space and its effect upon the individual. In Light on Life they have created a complete and thorough handbook that can be appreciated and understood by those with very little knowledge of astrology.

Respected television producer Barbara Hall cited *God at the Speed of Light* as one of the inspirations for her creation of the CBS TV series "Joan of Arcadia" (2003-05). The unique and supernatural characteristics of light that influenced Hall have equally served to inspire the likes of Copernicus, Ole Romer, Michelson/Morley, Sir Edwin Hubble, and Albert Einstein. Einstein, for instance, frequently envisioned what it would be like to ride on the back of a photon as it sped across the Universe at the speed of light--a speed at which Einstein calculated that time ceased to exist. Since Einstein first entertained his special theory, science has repeatedly verified the cessation of time at this singular velocity. The term "light speed" has paradoxically become the ultimate oxymoron: a velocity of 186,000 miles per second in a setting where time doesn't exist. The ramifications are profound and are the topic of this book--ramifications so profound, in fact, to convince this author, your ultimate skeptic, that an Eternal, Intelligent Power must exist. Once Lee Baumann came to fully accept these scientifically-proven, yet supernatural qualities of light, his further research only solidified the truly metaphysical nature of this ubiquitous form of universal energy. Suddenly, descriptions of "the light"

in the near-death experience and the Earth's sacred texts (e.g., "I am the light of the world") required no further explanation. God shares an intimate relationship with light. Baumann's *God at the Speed of Light* will complement and strengthen the spiritual foundation of any religious view.

From the big bang to black holes, this fast-paced illustrated tour of time and space for the astro-curious unlocks the science of the stars to reveal fascinating theories, surprising discoveries, and ongoing mysteries in modern astronomy and astrophysics. Before the big bang, time, space, and matter didn't exist. In the 14 billion years since, scientists have pointed their telescopes upward, peering outward in space and backward in time, developing and refining theories to explain the weird and wonderful phenomena they observed. Through these observations, we now understand concepts like the size of the universe (still expanding), the distance to the next-nearest star from earth (Alpha Centauri, 26 trillion miles) and what drives the formation of elements (nuclear fusion), planets and galaxies (gravity), and black holes (gravitational collapse). But are these cosmological questions definitively answered or is there more to discover? Oxford University astrophysicist and popular YouTube personality Dr. Becky

DEVELOPED UNDER THE SHADOWS of the Egyptian temples, Hellenistic astrology is an ancient form of divination inherited from Mesopotamian wisdom traditions. Distilled in Græco-Roman antiquity, and refined in the fires of philosophy and astronomy, it forms the bedrock of traditional western astrology (while also bearing profound similarities to Jyotish or Vedic astrology). Drawing on a body of Greek texts that have remained largely untranslated for almost two-thousand years, Demetra George brings the contemporary practice of astrology back to its ancient roots. Scholar, translator, and practitioner, her work reveals the potent cosmological veins that bear the lifeblood of traditional astrology. *Ancient Astrology in Theory and Practice* is, in essence, a training

Online Library Astrology The Speed Of Light

manual for the study and practice of Hellenistic astrology. In two volumes, it provides the complete foundations and detailed dynamics of ancient chart-reading techniques. Each volume and each technique is richly illustrated with diagrams, example charts, and practical exercises. **Volume 1: Assessing Planetary Condition** In ancient cosmology, the planetary divinities symbolised the hierarchy of forces that shape our lives in the sublunary world. Not all planets are created equal in a given nativity, however, and so the first step of the practicing astrologer is to assess the condition of each planet in a chart in order to determine its effectiveness (or lack thereof) in the native's life. To this end, this volume provides a series of rigorous methods for evaluating the condition of each planet in a birth chart through the lenses of classification (sect, gender, benefic/malefic), signs and rulerships (residences, reception, exaltation, trigons, bounds), the solar phase cycle (speed, direction, visibility, phase, phasis), lunar considerations (course, phases, bonding, nodes, bending, eclipses, prenatal lunation), and aspects (configurations, witnessing, testimony, bonification, maltreatment, adherence, overcoming, rays). Finally, it brings all of these factors together in a powerful synthesis that unlocks the layers of a chart with unrivaled precision.

Named a Best Book of 2020 by The Telegraph, The Times, and BBC History Magazine An illuminating guide to the scientific and technological achievements of the Middle Ages through the life of a crusading astronomer-monk. Soaring Gothic cathedrals,

violent crusades, the Black Death: these are the dramatic forces that shaped the medieval era. But the so-called Dark Ages also gave us the first universities, eyeglasses, and mechanical clocks. As medieval thinkers sought to understand the world around them, from the passing of the seasons to the stars in the sky, they came to develop a vibrant scientific culture. In *The Light Ages*, Cambridge science historian Seb Falk takes us on a tour of medieval science through the eyes of one fourteenth-century monk, John of Westwyk. Born in a rural manor, educated in England's grandest monastery, and then exiled to a clifftop priory, Westwyk was an intrepid crusader, inventor, and astrologer. From multiplying Roman numerals to navigating by the stars, curing disease, and telling time with an ancient astrolabe, we learn emerging science alongside Westwyk and travel with him through the length and breadth of England and beyond its shores. On our way, we encounter a remarkable cast of characters: the clock-building English abbot with leprosy, the French craftsman-turned-spy, and the Persian polymath who founded the world's most advanced observatory. *The Light Ages* offers a gripping story of the struggles and successes of an ordinary man in a precarious world and conjures a vivid picture of medieval life as we have never seen it before. An enlightening history that argues that these times weren't so dark after all, *The Light Ages* shows how medieval ideas continue to color how we see the world today.
