From one of the nation's preeminent experts on women and emotion, a breakthrough new book about how to stop negative thinking and become more productive It's no surprise that our fast-paced, overly self-analytical culture is pushing many people-especially women-to spend countless hours thinking about negative ideas, feelings, and experiences. Renowned psychologist Dr. Susan Nolen-Hoeksema calls this overthinking, and her groundbreaking research shows that an increasing number of women-more than half of those in her extensive study-are doing it too much and too often, hindering their ability to lead a satisfying life. Overthinking can be anything from fretting about the big questions such as "What am I doing with my life?" to losing sleep over a friend's innocent comment. It is causing many women to end up sad, anxious, or seriously depressed, and Nolen-Hoeksema challenges the assumption-heralded by so many pop-psychology pundits of the last several decades-that constantly expressing and analyzing our emotions is a good thing. In *Women Who Think Too Much*, Nolen-Hoeksema shows us what causes so many women to be overthinkers and provides concrete strategies that can be used to escape these negative thoughts, move to higher ground, and live more productively. *Women Who Think Too Much* will change lives and is destined to become a self-help classic.

Aimed at those new to the subject, *Fundamentals of Psychology* is a clear and reader-friendly textbook that will help students explore and understand the essentials of psychology. This text offers a balanced and accurate representation of the discipline through a highly accessible synoptic approach, which seamlessly brings together all the various related topics. *Fundamentals of Psychology* combines an authoritative tone, a huge range of psychological material and an informal, analogy-rich style. The text expertly blends admirably up-to-date empirical research and real-life examples and applications, and is both readable and factually dense. The book introduces all the main approaches to psychology, including social, developmental, cognitive, biological, individual differences, and abnormal psychology, as well as psychological research methods. However, it also includes directions for more detailed and advanced study for the interested student. *Fundamentals of Psychology* incorporates many helpful textbook features which will aid students and reinforce learning, such as: Key-term definitions Extremely clear end-of-chapter summaries Annotated further reading sections Evaluations of significant research findings Numerous illustrations presented in attractive full color. This textbook is also accompanied by a comprehensive program of resources for both students and instructors, which is available free to qualifying adopters. The resources include a web-based Student Learning Program, as well as chapter-by-chapter lecture slides and an interactive chapter-by-chapter multiple-choice question test bank. Combining exceptional content, abundant pedagogical features, and a lively full-color design, *Fundamentals of Psychology* is an essential resource for anyone new to the subject and more particularly those beginning undergraduate courses. The book will also be ideal for students studying psychology within education, nursing and other healthcare professions.

This two volume text provides a comprehensive introduction to the issues, theories and methods of psychology, including both classic approaches and recent research. The areas covered range from the intellectual, social and emotional development of the child to the ways in which adults perceive, attend, remember and communicate; from Freud's psychoanalytic framework to the work of present day psychologists; from debates about the scientific status of psychology to the special problems which the study of people poses for psychologists. Each chapter presents important issues in depth, highlighting controversies while showing that they rarely have neat solutions. Throughout, emphasis is given to the contrasting levels of analysis which contribute to the understanding of psychological functioning, from fundamental biological processes to complex social interactions. While prepared for the Open University course "Introduction to Psychology" these volumes will provide an excellent introduction to students of psychology at other universities and colleges. The text incorporates the best of the Open University's tried and tested teaching methods, and particular importance is placed on encouraging the reader's active participation, making the books enjoyable and stimulating as well as informative. The text is divided into eight sections comprising eighteen

"This book is designed to help students organize their thinking about psychology at a conceptual level. The focus on behaviour and empiricism has produced a text that is better organized, has fewer chapters, and is somewhat shorter than many of the

leading books. The beginning of each section includes learning objectives; throughout the body of each section are key terms in bold followed by their definitions in italics; key takeaways, and exercises and critical thinking activities end each section"--BCcampus website.

This text offers an up-to-date view of the dynamic nature of contemporary psychology. The authors build a strong foundation in the fundamentals of psychology while featuring the most innovative contemporary research. With plenty of supportive pedagogy, experiments are explained in detail, and charts and figures add to an understanding of the results. The book offers an integrated biological orientation, a trend that is changing the way psychological topics are viewed, exemplified by the coverage of bio-evolutionary research.

Finding Equilibrium explores the post-World War II transformation of economics by constructing a history of the proof of its central dogma—that a competitive market economy may possess a set of equilibrium prices. The model economy for which the theorem could be proved was mapped out in 1954 by Kenneth Arrow and Gerard Debreu collaboratively, and by Lionel McKenzie separately, and would become widely known as the "Arrow-Debreu Model." While Arrow and Debreu would later go on to win separate Nobel prizes in economics, McKenzie would never receive it. Till D ppe and E. Roy Weintraub explore the lives and work of these economists and the issues of scientific credit against the extraordinary backdrop of overlapping research communities and an economics discipline that was shifting dramatically to mathematical modes of expression. Based on recently opened archives, Finding Equilibrium shows the complex interplay between each man's personal life and work, and examines compelling ideas about scientific credit, publication, regard for different research institutions, and the awarding of Nobel prizes. Instead of asking whether recognition was rightly or wrongly given, and who were the heroes or villains, the book considers attitudes toward intellectual credit and strategies to gain it vis- -vis the communities that grant it. Telling the story behind the proof of the central theorem in economics, Finding Equilibrium sheds light on the changing nature of the scientific community and the critical connections between the personal and public rewards of scientific work.

Dr. James W. Kalat's BIOLOGICAL PSYCHOLOGY is the most widely used text in the course area, and for good reason: an extremely high level of scholarship, clear and occasionally humorous writing style, and precise examples. Throughout all eleven editions, Kalat's goal has been to make biological psychology accessible to psychology students, not just to biology majors and pre-meds. Another goal has been to convey the excitement of the search for biological explanations of behavior, and Kalat delivers. Updated with new topics, examples, and recent research findings--and supported by new online bio-labs, part of the strongest media package yet--this text speaks to today's students and instructors. Now in its 16th edition, Atkinson & Hilgard's Introduction to Psychology has been fully revised and updated to reflect all recent research developments, theories and ideas, whilst also retaining all of the qualities which have established it as a leading undergraduate psychology textbook over the past five decades, including its highly accessible and engaging student-centred approach. The established author team of Susan Nolen-Hoeksema, Barbara Fredrickson and Geoffrey R. Loftus has been joined by Christel Lutz (University of Utrecht), who has helped to add a fresh European influence, and thereby create a truly international introductory textbook. The 'Cutting Edge Research' box features and 'Seeing Both Sides' essays which conclude each chapter have been fully updated and replaced throughout, using contributions from a range of experts across the globe, and really help to bring the text to life for students.

From the bestselling author of Women Who Think Too Much, a groundbreaking self-improvement program that empowers women Women are extraordinarily hard on themselves. They scrutinize their flaws, asking "Am I a good lover? A good mother? Successful in my career?" They get preoccupied with ways they do not measure up, twisting themselves into knots to fix problems no one else can see. The Power of Women from award-winning and bestselling psychologist Susan Nolen- Hoeksema shows women how to break this cycle-by discovering and utilizing their unique psychological strengths. Drawing on original research and the instructive stories of real people, Nolen-Hoeksema identifies the skill sets that women, based on their biology and social roles, bring to challenges: - Mental strengths, such as the instinct to manage scarce resources - Identity strengths, which maintain strong values under pressure emotional strengths, such as anticipating the effects of decisions relational strengths, with an emphasis on win-win solutions Combined, these strengths give women a powerful ability to lead during transformational times. She then provides hands-on assessments for pinpointing strengths with the most relevance to a problem, exercises for building strengths, and inspiring examples of women's inventiveness, resilience, and sheer determination. This revolutionary book of self-improvement gives women the tools to hone their skills as entrepreneurs and managers, mothers and wives, mentors and community leaders--and as individuals pursuing their talents and dreams.

For courses in Cognitive Psychology, Cognitive Neuroscience, Learning and Memory, Philosophy of Mind, and Philosophy of Psychology. The first book that fully integrates information about the brain and neural processing into the standard curriculum in cognitive psychology.
