This collection of essays offers a unique insight and overview of the secured transactions law in many of the most important countries in Asia, as well as reflections on the need for, benefits of and challenges for reform in this area of the law. The book provides a mixture of general reflections on the history, successes and challenges of secured transaction law reform, and critical discussion of the law in a number of Asian countries. In some of the countries, the law has already been reformed, or reform is under way, and here the reforms are considered critically, with recommendations for future work. In other countries, the law is not yet reformed, and the existing law is analysed so as to determine what reform is desirable, and whether it is likely to take place. First, this book will enable those engaging with the law in Asia to understand better the contours of the law in both civil and common law jurisdictions. Second, it provides analytical insights into why secured transactions law reform happens or does not happen, the different methods by which reform takes place, the benefits of reform and the difficulties that need to be overcome for successful reform. Third, it discusses the need for reform where none has yet taken place and critically assesses the reforms which have already been enacted or are being considered. In addition to providing a forum for discussion in relation to the countries in question, this book is also a timely contribution to the wider debate on secured transactions law reform which is taking place around the world.

This book, the third in the InTech Tsunami series, has been published in order to deepen efforts towards the understanding of tsunami dynamics that seems to be never enough. As the previous books in this series, "The Tsunami Threat - Research and Technology" (January 2011) and "Tsunami - A Growing Disaster" (December 2011), this multi-disciplinary volume compiles a collection of scientific papers showing the state-of-the-art of tsunami research at different levels. The various contributions cover an array of themes that span from geological evidence to post-trauma human care, encompassing pre-tsunami analyses and modeling to post-tsunami management and preparedness techniques. As its counterparts, "Tsunami - Analysis of a Hazard: from physical interpretation to human impact" continues to present evidence and case studies from different regions of the World: from the isolated Hawaiian Islands and Northern Indian Ocean, to the edges of the Atlantic and Eastern Mediterranean.

This proceeding contains selected papers from the National Seminar on "The Role and Strategy of Higher Education through the Results of Research and Community Service Entering the Industrial Age 4.0" which conducted on November 23rd, 2019 in Banjarmasin, Indonesia. This National Seminar was organized by Sari Mulia University, Banjarmasin, Indonesia. This conference accommodates research topics and

community service from various aspects such as health, humanities, science and technology. We would like to express our appreciation and gratitude to the invited experts who have provided insights to the participants of this national seminar, as well as the research committee and paper reviewers who have worked hard until there are 95 papers worthy of publication in the NS-UNISM 2019 proceedings. Papers in this proceedings are expected to provide academic benefits, especially in broadening our horizons of understanding in our area of expertise as academics and practitioners. We realize that what we present for this publication is far from perfect. Constructive criticism is welcome for improvement. Finally, I represent the national seminar committee and also on behalf of the Sari Mulia University, Banjarmasin, Indonesia expressing my gratitude for participating and congratulating the publication of the paper in the NS-UNISM 2019. We from the Civitas Academica Sari Mulia University, together with the Committee also want to say thank you so much to all persons who have supported and actively participated in the success of this event. Hopefully this proceeding can be used as a reference in developing academic studies, technology and improving learning activities in the fields of health, humanities, and science and technology. The Group D exam is conducted by RRBs on the behalf of the Railway Recruitment Cells (RRCs). RRB/RRC Group D exam is one of the most competitive exams in our country. Millions of candidates apply for Group D posts in Indian Railways but only a few eligible candidates are selected as per the vacancies of the different Railway Zones. The RRB/RRC Group D exam contains 100 objective questions to be answered in a time duration of 90 minutes. The questions are based on General Science, Reasoning, Mathematics, General Awareness, and Current Affairs. The questions asked in RRB/RRC Group D exam are of matriculation level. We provide RRB/RRC Group D mock tests and RRB/RRC Group D online test series to help students for the complete preparation of the exam. Course manual provides a safe, reliable method for immediate management of an injured patient. Content and skills

presented in the course are designed to assist doctors in providing emergency care for trauma patients. Essential information is provided for identification and treatment of life-threatening or potentially life-threatening injuries under extreme pressure of time.

This completely revised edition of *The Rat Brain in Stereotaxic Coordinates*, the second most cited book in science, represents a dramatic update from the previous edition. Based on a single rat brain, this edition features an entirely new coronal set of tissue cut in regular 120 micron intervals with accompanying photographs and drawings of coronal, horizontal and sagittal sections of this new set. The use of the single brain allows for greater consistency between sections, while advances in histochemistry techniques provides increased refinement in the definition of brain areas, making this the most accurate and detailed stereotaxic rat atlas produced to date. The atlas will also include a CD-ROM featuring all of the graphics and text. Every lab working with the rat as an experimental animal model will want to use this book as their atlas of choice. This book is also available in a softcover spiral binding at the same price. \* Includes twice as many coronal sections, nissl plates, and sagittal plates as the previous edition \* Uses a single rat brain allowing for better consistency and better delineations in the line drawings of structures \* Provides improved stereotaxic coordinates at a higher level of detail \* Accompanying CD-ROM features graphics and text \* Now available as hardcover version and softcover version with a spiral binding at the same price.

*Acute Care Surgery* is a comprehensive textbook covering the related fields of trauma, critical care, and emergency general surgery. The full spectrum of *Acute Care Surgery* is expertly addressed, with each chapter highlighting cutting-edge advances in the field and underscoring state-of-the-art management paradigms. In an effort to create the most definitive reference on *Acute Care Surgery*, an evidence-based approach is emphasized for all content included. Also, notable controversies are discussed in detail often accompanied by data-driven resolutions.

For Readers of Paul Kalanithi's? When Breath Becomes Air, an Intensive Care Doctor Reveals How Everyday Emotions Are Taken to Extremes in the ICU  
Dr. Aoife Abbey takes us beyond the medical perspective to see the humanity at work inside our hospitals through the eyes of doctors and nurses as they witness and experience the full spectrum of human emotion with every shift. It is their responsibility to mitigate the grief of a family in mourning, calm a patient about to die, and confront their own fear of failure when lives are on the line. Whether they're providing hospice care, tending to victims of car accidents or violent attacks, determining the correct treatment for someone displaying signs of a heart-attack or stroke, and managing staff, stress is a doctor's number one companion. Cycling through the whirlwind of

emotion that accompanies every case isn't only exhausting—it can be fatal. Told using seven key emotions—fear, grief, joy, distraction, anger, disgust, and hope—Seven Signs of Life opens the door, and heart, of the hectic life inside a hospital to reveal what it means to be alive and how it feels to care for others.

Nearly thirty years after the end of the Cold War, its legacy and the accompanying Russian-American tension continues to loom large. Russia's access to detailed information on the United States and its allies may not seem so shocking in this day of data clouds and leaks, but long before we had satellite imagery of any neighborhood at a finger's reach, the amount the Soviet government knew about your family's city, street, and even your home would astonish you. Revealing how this was possible, The Red Atlas is the never-before-told story of the most comprehensive mapping endeavor in history and the surprising maps that resulted. From 1950 to 1990, the Soviet Army conducted a global topographic mapping program, creating large-scale maps for much of the world that included a diversity of detail that would have supported a full range of military planning. For big cities like New York, DC, and London to towns like Pontiac, MI and Galveston, TX, the Soviets gathered enough information to create street-level maps. What they chose to include on these maps can seem obvious like locations of factories and ports, or more surprising, such as building heights, road widths, and bridge capacities. Some of the detail suggests early satellite technology, while other specifics, like detailed depictions of depths and channels around rivers and harbors, could only have been gained by actual Soviet feet on the ground. The Red Atlas includes over 350 extracts from these incredible Cold War maps, exploring their provenance and cartographic techniques as well as what they can tell us about their makers and the Soviet initiatives that were going on all around us. A fantastic historical document of an era that sometimes seems less distant, The Red Atlas offers an uncanny view of the world through the eyes of Soviet strategists and spies.

Though a large number of Indians have excelled academically the world over they constitute a miniscule fraction of Indians who have the potential to do equally well or better. This book introspects on the educational system in India. The author discusses the challenges faced by schools, teachers and Principals. The responsibilities of the management and the parents are addressed. The challenges of overcrowded class rooms, lack of infrastructure and absence of sensitive

attention to students and dismissal of genuine complaints of students are discussed. People engaged in imparting school education are persuaded by the author to accord top priority to students' welfare in a sustained manner. The author narrates many anecdotes drawn from experience to illustrate the ailments afflicting our schools. The book is not merely a compilation of the challenges faced by our students, teachers and Principals. Some possible solutions are also suggested. Children deserve the best education whatever be their social background. The focus of the book is on children and entirely on children. The book is dedicated to the student community, the future of our country.

The much-acclaimed BookTok sensation! • The tag #theatlassix already has millions of views on TikTok • A dark academic debut fantasy with an established cult following that reads like THE SECRET HISTORY meets THE UMBRELLA ACADEMY • The first in an explosive trilogy The Alexandrian Society, caretakers of lost knowledge from the greatest civilizations of antiquity, are the foremost secret society of magical academicians in the world. Those who earn a place among the Alexandrians will secure a life of wealth, power, and prestige beyond their wildest dreams, and each decade, only the six most uniquely talented magicians are selected to be considered for initiation. Enter the latest round of six: Libby Rhodes and Nico de Varona, unwilling halves of an unfathomable whole, who exert uncanny control over every element of physicality. Reina Mori, a naturalist, who can intuit the language of life itself. Parisa Kamali, a telepath who can traverse the depths of the subconscious, navigating worlds inside the human mind. Callum Nova, an empath easily mistaken for a manipulative illusionist, who can influence the intimate workings of a person's inner self. Finally, there is Tristan Caine, who can see through illusions to a new structure of reality—an ability so rare that neither he nor his

peers can fully grasp its implications. When the candidates are recruited by the mysterious Atlas Blakely, they are told they will have one year to qualify for initiation, during which time they will be permitted preliminary access to the Society's archives and judged based on their contributions to various subjects of impossibility: time and space, luck and thought, life and death. Five, they are told, will be initiated. One will be eliminated. The six potential initiates will fight to survive the next year of their lives, and if they can prove themselves to be the best among their rivals, most of them will. Most of them.
