Ever since aircraft changed the scope of the First World War, flight became both a passion and business in Riverside. Early barnstormers needed places to park, refuel and service their aircraft, so airports started popping up. Alessandro Field became March Field in 1918. By World War II, seventy-five thousand troops were deployed at March. Today's March Joint Air Reserve Base has been a vital wartime training and relay installation and a sentinel of peacetime. In 1925, Roman Warren, known as the "Cowboy Aviator," established Riverside Airport, which later became Flabob Airport. Take to the air with authors Marge and Tony Bitetti as they trace Greater Riverside's history of flight--from Banning, Corona and Riverside Municipal Airports to Perris Airport, Skylark Field and others.

It is now almost exactly a hundred years since a heavier-than-air craft first took off and landed on a warship, and from the very beginning flying at sea made unique demands on men and machines. As warplanes grew larger, faster and heavier, air operations from ships were only possible at all through constant development in technology, techniques and tactics. This book charts the progress and growing effectiveness of naval air power, concentrating on the advances and inventions - most of them British - that allowed shipborne aircraft to match their land-based counterparts, and looking at their contribution to 20th century warfare. Written by a retired Fleet Air Arm pilot and an award-winning historian of naval flying, this is a masterly overview of the history of aviation in the world's navies down to the present day. Heavily illustrated from the author's comprehensive collection of photographs, the book will be essential reading to anyone with an interest in navies or air power.

Flying as an airline passenger is, statistically, one of the safest forms of travel. Even so, the history of civil aviation is littered with high-profile disasters involving major loss of life. This new edition of the authoritative work on the subject brings the grim but important story of air disasters right up to date. David Gero assembles a list of major air disasters since the 1950s across continents. He investigates every type of calamity, including those caused by appalling weather, mechanical failure, pilot error, inhospitable terrain and hostile action. The first incident of sabotage involving a commercial jetliner is covered, as is the first, much-feared crash of the jumbo jet era. Examined alongside less well-known disasters are high-profile episodes such as that of Pan American Flight 103 at Lockerbie in 1988, the Twin Towers tragedy of 11 September 2001 and, more recently, the disappearance of Malaysia Airlines Flight 370 in 2014 – the greatest mystery of the commercial jet age. Aviation Disasters is the authoritative record of air disasters worldwide, fully illustrated with a fascinating selection of photographs.
