This book constitutes the refereed proceedings of the 13th International Conference on Integer Programming and Combinatorial Optimization, IPCO 2008, held in Bertinoro, Italy, in May 2008. The 32 revised full papers presented were carefully reviewed and selected from 95 submissions. The papers cover various aspects of integer programming and combinatorial optimization and present recent developments in theory, computation, and applications in that area. Topics included are such as approximation algorithms, branch and bound algorithms, branch and cut algorithms, computational biology, computational complexity, computational geometry, cutting plane algorithms, diophantine equations, geometry of numbers, graph and network algorithms, integer programming, matroids and submodular functions, on-line algorithms and competitive analysis, polyhedral combinatorics, randomized algorithms, random graphs, scheduling theory and scheduling algorithms, and semidefinite programs. The innovation economy sets new standards for global business and requires efficient innovation management to plan, execute and evaluate innovation activities, establish innovation capability and coordinate resources and capacities for innovation on an intra- and inter-organizational level. Communication has

become a critical factor underpinning successful innovation. As a new communication field, innovation communication facilitates the successful launches of new products and services, the establishment of stakeholder relationships, and the strengthening of corporate reputation in the long-run. Consequently, firms today need to develop a strong portfolio of communication tools as an integral part of their strategic innovation management activities. This new edition mainly concentrates on emerging approaches and methods for integrating communication as part of strategic innovation management. A key theme is the provision of an integrated perspective to bridge the gap between innovation management and communication management at both strategic and operational levels. This book makes an important contribution to this evolving academic domain by providing multiple perspectives on the latest research on innovation communication and strategic open innovation. It also provides guidance for managers seeking to understand the diverse ways by which they can leverage communication to support successful innovation.

Though in antiquity the social comedies of Menander ranked second in popularity only to Homer, his plays were for centuries thought to be irretrievably lost. It was only in the 20th century that large sections of his work began to emerge, *The Arbitration's* major portion published in 1907, *The Shield* in 1969. With these and

other finds we can now gauge in full the skill that Menander brought to his works. In preparing this edition the author has aimed to make accessible to readers some of the consummate sophistication in dramatic technique and use of language that once produced the question, 'Menander and Life, which of you imitated the other?'

Contributions from 80 world-renowned authorities representing a broad international background lend Fungal Biotechnology in Agricultural, Food, and Environmental Applications first-class information on the biotechnological potential of entomopathogenic fungi and ergot alkaloids, applications of Trichoderma in disease control, and the development of mycoherbicides. Additional topics include fungal control of nematodes, control of plant disease by arbuscular mycorrhizal fungi, strategies for controlling vegetable and fruit crops, molecular biology tactics with mycotoxigenic fungi and the development of biofungicides, production of edible fungi, fermented foods, and high-value products like mycoprotein.

Strategy and Communication for Innovation Springer Science & Business Media
This publication contains the proceedings of a Seminar on 'The Mucosal Immune System' held by the Commission of the European Communities (CEC) at the University of Bristol. School of Veterinary Science. Langford. Bristol on September 9th - 11th.

1960. The seminar formed part of the CEC programme of co-ordinated agricultural research on Protection of the Young Animal against Perinatal Disease and was organised by Professor F.J. Bourne and his colleagues Dr. T.J. Newby and Dr. C.R. Stokes. The Proceedings were edited by the organisers assisted by Janssen Services, 33a High Street, Chislehurst, Kent and provide an authoritative and up-to-date account of this rapidly moving research area. Serious economic loss from diseases of mucosal surfaces - particularly the enteric and respiratory tracts - occurs in young farm animals throughout the EEC. Protection against these diseases is based on an understanding of their epidemiology including host defence mechanisms. Mucosal vaccines have in the main given disappointing field results with, however, some notable exceptions. This seminar rationalises methods used to stimulate mucosal immune defence and indicates likely areas for future research and development. The CEC wishes to thank the organisers and the participants who contributed to the success of the seminar.

OPENING SESSION Chairman F.J. Bourne 3 OPENING REMARKS F.J. Bourne On behalf of the University of Bristol and the European Economic Community my colleagues and I welcome you to the Langford Veterinary School.
