Hymns are more than beautiful musical compositions; they provide us with a heightened language for praising and speaking to God, all while teaching us theology that reflects both the depth and complexity of Our Lord. Sacred hymns in our day have given way to "fifth-rate poetry set to fourth-rate music," as C.S. Lewis once remarked. At times, the music used in worship can make us feel as though the culture is usurping the Church rather than being transfigured by it. There is a clear and present need to resurrect those distinctively different songs with a distinctively different vocabulary for people who want to live distinctive lives as followers of Christ. In these pages, Fr. George William Rutler introduces and reflects upon dozens of the greatest hymns written from the earliest years of the Church through the Twentieth Century. The text and composition of each hymn is included, as well as inspiring accounts of their authors and composers, fascinating stories and historical events connected with them, and notes on the significant contributions each one made to theology and music. Fr. Rutler has recovered here a rich musical legacy that will help us to give glory to our God who is Lord of all.

This monograph covers the latest developments in lanthanide doped glasses and phosphor materials. The book aims to explain the basic functioning mechanisms of phosphor materials, and the luminescence behaviour of glasses doped with certain lanthanide ions. It also describes how to plot colors in a CIE chromaticity diagram. The book will be of use for senior researchers, materials scientists, chemists, physicists, engineers, as well as research students to gain knowledge on current developments of these materials. The power of words has rarely been given a more compelling demonstration than in the Gettysburg Address. Lincoln was asked to memorialize the gruesome battle. Instead, he gave the whole nation "a new birth of freedom" in the space of a mere 272 words. His entire life and previous training, and his deep political experience went into this, his revolutionary masterpiece. By examining both the address and Lincoln in their historical moment and cultural frame, Wills breathes new life into words we thought we knew, and reveals much about a president so mythologized but often misunderstood. Wills shows how Lincoln came to change the world and to effect an intellectual revolution, how his words had to and did complete the work of the guns, and how Lincoln wove a spell that has not yet been broken.

Ferromagnetism is a form of magnetism that can be acquired in an external magnetic field and usually retained in its absence, so that ferromagnetic materials are used to make permanent magnets. A ferromagnetic material may therefore be said to have a high magnetic permeability and susceptibility (which depends upon temperature). Examples are iron, cobalt, nickel, and their alloys. Ultimately, ferromagnetism is caused by spinning electrons in the atoms of the material, which act as tiny weak magnets. They align parallel to each other within small regions of the material to form domains, or areas of stronger magnetism. In an unmagnetised material, the domains are aligned at random so there is no overall magnetic effect. If a magnetic field is applied to that material, the domains align to point in the same direction, producing a strong overall magnetic effect. Permanent magnetism arises if the domains remain aligned after the external field is removed. Ferromagnetic materials exhibit hysteresis. In 2004, it was discovered that a certain allotrope of carbon, nanofoam, exhibited ferromagnetism. The effect dissipates after a few hours at room temperature, but lasts longer at cold temperatures. The material is also a semiconductor. It is thought that other similarly formed materials, of boron and nitrogen, may also be ferromagnetic. This new book rings together leading research from throughout the world.

Eleanor Davies (1590-1652) was one of the most prolific women writing in early seventeenth-century England. This volume includes thirty-eight of the sixty-some prophetic tracts that she published. Inspired to prophecy by a visionary experience in 1625, the year of Charles I's accession to the throne, she devoted herself to warning her contemporaries that the Day of Judgement was imminent. Her zeal and her intricately constructed tracts confounded contemporaries who called her mad. She experienced repeated imprisonment and also confinement to Bedlam, London's mental hospital. The tracts tell her own story as woman and prophet. They offer an opportunity to study her experiences as wife, mother, and widow; they also exhibit her extraordinary intellect, extensive education, and fascination with words. In showing how England's history was fulfilling the biblical prophecies in the book of Daniel and the book of Revelation, she commented about the political and religious controversies of the turbulent period preceding and during

the English Civil War and Revolution.
