Before the Internet became widely known as a global tool for terrorists, one perceptive U.S. citizen recognized its ominous potential. Armed with clear evidence of computer espionage, he began a highly personal quest to expose a hidden network of spies that threatened national security. But would the authorities back him up? Cliff Stoll's dramatic firsthand account is "a computer-age detective story, instantly fascinating [and] astonishingly gripping" (Smithsonian). Cliff Stoll was an astronomer turned systems manager at Lawrence Berkeley Lab when a 75-cent accounting error alerted him to the presence of an unauthorized user on his system. The hacker's code name was "Hunter"—a mysterious invader who managed to break into U.S. computer systems and steal sensitive military and security information. Stoll began a one-man hunt of his own: spying on the spy. It was a dangerous game of deception, broken codes, satellites, and missile bases—a one-man sting operation that finally gained the attention of the CIA . . . and ultimately trapped an international spy ring fueled by cash, cocaine, and the KGB.

Rowling, a warm, fast-paced, funny fairy tale of a fearsome monster, thrilling adventure, and hope against all odds. Once upon a time there was a tiny kingdom called Cornucopia, as rich in happiness as it was in gold, and famous for its food. From the delicate cream cheeses of Kurdsburg to the Hopes-of-Heaven pastries of Chouxville, each was so delicious that people wept with joy as they ate them. But even in this happy kingdom, a monster lurks. Legend tells of a fearsome creature living far to the north in the Marshlands... the Ickabog. Some say it breathes fire, spits poison, and roars through the mist as it carries off wayward sheep and children alike. Some say it's just a myth... And when that myth takes on a life of its own, casting a shadow over the kingdom, two children - best friends Bert and Daisy - embark on a great adventure to untangle the truth and find out where the real monster lies, bringing hope and happiness to Cornucopia once more. Featuring full color illustrations by children from across the United States and Canada, this original fairy tale from one of the world's most celebrated storytellers will captivate readers of all ages.

Postharvest Handling: A Systems Approach introduces a new concept in the handling of fresh fruits and vegetable. Traditional treatments have been either physiologically based with an emphasis on biological tissue or technologically based with an emphasis on storage and handling. This book integrates all processes from production practices through consumer consumption with an emphasis on understanding market forces and providing fresh product that meets consumer expectations. Postharvest physiologists and technologists across the disciplines of agricultural economics, agricultural engineering, food science and horticulture along with handlers of minimally-processed products within the fresh produce fruit and vegetable processing industries will find this to be an invaluable source of information. Uses a systems approach that provides a unique perspective on the handling of fresh fruits and vegetables Designed with the applied perspective to complement the more basic perspectives provided in other treatments Provides the integrated, interdisciplinary perspective needed in research to improve the quality of fresh and minimally processed products Emphasizes that the design of handling systems should be market-driven rather than concentrating on narrow specifics Fieldworkers' notebooks are full of sensations and observations in which the subjectivity of the ethnographer seeps through. Not really science. Much closer to life. Yet in classical anthropology they are invisible to the reader. In this book the focus is reversed, turning Anthropology Inside Out as it explores the vibrant backstage life of field notes. What happens when we put them centre stage? Aimed at both curious novice and experienced practitioner, the chapters read as a catalogue of experimental practices teetering on the edge of the tradition: intuitively observational drawings; notes pervaded with paranoia; collective notetaking; crisis-ridden personal confessions; layers of notes in photographs and archives; old flip-flops that trigger memories in mind and body. This exploration of what field notes are, can do and could be, concludes with a constellation of shimmering notes on notes from Michael Taussig, a meta-commentary on anthropologists' fetishistic relationship with the most personal of professional tools. 'This extremely timely and original book starts a long overdue discussion within anthropology. The authors are to be commended for filling a gap in the methodology literature, which was so glaring until now as to be invisible to most of us.' Professor Thomas Hylland Eriksen, Department of Social Anthropology, University of Oslo 'The book is steeped in love for the materiality of the process of learning about life - inner life as well as the life out there. The chapters open up for reflections on the artistic and scientific aspects of the anthropological endeavour and become experimental in their expansion of the genre of

Relevance, first published in 1986, was named as one of the most important and influential books of the decade in the Times Higher Educational Supplement. This revised edition includes a new Preface outlining developments in Relevance Theory since 1986, discussing the more serious criticisms of the theory, and envisaging possible revisions or extensions. The book sets out to lay the foundation for a unified theory of cognitive science. The authors argue that human cognition has a goal: we pay attention only to information which seems to us relevant. To communicate is to claim someone's attention, and hence to imply that the information communicated is relevant. Thus, a single property - relevance is seen as the key to human communication and cognition. A second important feature of the book is its approach to the study of reasoning. It elucidates the role of background or contextual information in spontaneous inference, and shows that non-demonstrative inference processes can be fruitfully analysed as a form of suitably constrained guesswork. It directly challenges recent claims that human central thought processes are likely to remain a mystery for some time to come. Thirdly, the authors offer new insight into language and literature, radically revising current view on the nature and goals of verbal comprehension, and in particular on metaphor, irony, style, speech acts, presupposition and implicature.
