In addition to offering a comprehensive understanding of the art of tongue diagnosis, this book includes ancient and modern healing practices based on Healing Tastes, Herbal Therapies and Dietary Protocols. The knowledge contained in this book is invaluable for supporting oneself and others on the journey to wholeness. The educational foundation of the book prepares us to really understand the meaning and use of tongue diagnosis. The ancient art of tongue diagnosis, as this book defines it, is the science of the shape, shadings and markings of the tongue, which describe the current state of an individual's health, as well as their inherited constitution. The potential of tongue diagnosis is that it gives a non-invasive way to measure the tissue integrity of the body, especially the Agni of the digestive system or the Fire or strength of the digestive system. This can be assessed by simply observing the color and structure of the tongue, then we have a very simple way to take preventive steps to correct those imbalances, and we have a very simple feedback system, meaning the tongue's color, size, shape and shading, to let us know how successful our approach has been.

An ethnography of Ayurvedic medicine which argues the ills it cures are largely effects of postcolonial identity.

Until recently policy makers and health professionals in developing countries have neglected newborn care, even though 70% of infant deaths occur during the first month of life. The principles of essential newborn care are simple: resuscitation, warmth to avoid hypothermia, early breast-feeding, hygiene, support for the mother-infant relationship, and early treatment for low birth weight or sick infants. Putting these principles into practice does not require expensive high technology equipment. This important book has been written by experts in newborn care, mostly from developing countries in south Asia. It contains a review of the current health status of mothers and newborn infants in the developing world, the evidence base for cost-effective essential and preventive neonatal interventions in poor communities, ideas for improving service delivery, and the priorities for future action and research. Turmeric belongs to the family Zingiberaceae and is a yellow spice of high economic importance due to its medicinal value. Cultivated in tropical and sub-tropical regions around the world, it is used extensively as a colouring, flavouring and preserving agent. In recent years, several drugs derived from natural products have been developed and current drug research is actively investigating the possible therapeutic roles of many Ayurvedic medicines, most notable among those being examined is turmeric. The wide range of pharmacological activities attributed to turmeric come mainly from curcuminoids and two related compounds, demethoxycurcumin and bisdemethoxycurcumin. This comprehensive book brings together the research carried out on constituents obtained from turmeric and highlights their chemical and biological activities. Comprising 17 chapters, each written by experts in their respective field and curated by authorities, it will be invaluable to all those who are involved in the production, processing, marketing, and the use of turmeric. Appealing to researchers and professionals in natural products, nutraceuticals and food chemists, this book is exposing some of the myths and showing areas for possible future use.
