ORACLE 11G: SQL is not simply a study guide; it is written for individuals who have just a basic knowledge of databases and can be utilized in a course on this latest implementation of SQL from Oracle.

This is the first edited volume about affective minds, a title reflecting our conviction that in order to understand how the human mind works we cannot ignore its affective aspects. Although cognitive science as an integrated approach to studies of the mind has achieved some remarkable success by treating the mind as an information processing system and emphasizing the roles of domain-specific knowledge in its operation, breakthroughs to a deeper understanding of the mind's mechanisms, functions, and origins require us to take "emotions" into account. What kinds of emotions are examined varies considerably among the chapters, from biological software producing fear, anger and other basic emotions to socioculturally shaped self-related and moral emotions. However, each group of authors investigates particular exemplars of emotions deeply in relation with cognition. How relationships between cognition and emotion are specified also varies, for instance emotion may be conceptualized as a pattern of activation of cognitive components constituting the mind, as modifying or modulating the cognitive system so that it can promptly process urgent matters, or as enriching cognition and thus human life rather than being adaptive in terms of survival. This volume as a whole constitutes a forum for scholars from a variety of disciplines, in which studies of the cognition-emotion relationships provide them with a vantage point to unite seemingly very different approaches. Its theorization at mental-representational levels is tied to neuroscience and comparative animal studies on the one hand, and social and behavioral sciences on the other. In addition, enhanced understandings of affective minds are to serve practical purposes such as improving social organizations, artificial systems and artifacts. The contributors explore this challenging theme of affective minds, using a variety of perspectives, methods and concepts.

Aircraft System Safety: Assessments for Initial Airworthiness Certification presents a practical guide for the novice safety practitioner in the more specific area of assessing aircraft system failures to show compliance to regulations such as FAR25.1302 and 1309. A case study and safety strategy beginning in chapter two shows the reader how to bring safety assessment together in a logical and efficient manner. Written to supplement (not replace) the content of the advisory material to these regulations (e.g. AMC25.1309) as well as the main supporting reference standards (e.g. SAE ARP 4761, RTCA/DO-178, RTCA/DO-154), this book strives to

amalgamate all these different documents into a consolidated strategy with simple process maps to aid in their understanding and optimise their efficient use. Covers the effect of design, manufacturing, and maintenance errors and the effects of common component errors Evaluates the malfunctioning of multiple aircraft components and the interaction which various aircraft systems have on the ability of the aircraft to continue safe flight and landing Presents and defines a case study (an aircraft modification program) and a safety strategy in the second chapter, after which each of the following chapters will explore the theory of the technique required and then apply the theory to the case study

This is the first book to cover GRASP (Greedy Randomized Adaptive Search Procedures), a metaheuristic that has enjoyed wide success in practice with a broad range of applications to real-world combinatorial optimization problems. The state-of-the-art coverage and carefully crafted pedagogical style lends this book highly accessible as an introductory text not only to GRASP, but also to combinatorial optimization, greedy algorithms, local search, and path-relinking, as well as to heuristics and metaheuristics, in general. The focus is on algorithmic and computational aspects of applied optimization with GRASP with emphasis given to the end-user, providing sufficient information on the broad spectrum of advances in applied optimization with GRASP. For the more advanced reader, chapters on hybridization with path-relinking and parallel and continuous GRASP present these topics in a clear and concise fashion. Additionally, the book offers a very complete annotated bibliography of GRASP and combinatorial optimization. For the practitioner who needs to solve combinatorial optimization problems, the book provides a chapter with four case studies and implementable templates for all algorithms covered in the text. This book, with its excellent overview of GRASP, will appeal to researchers and practitioners of combinatorial optimization who have a need to find optimal or near optimal solutions to hard combinatorial optimization problems.
