VeriSM: Unwrapped and Applied, the second volume within the VeriSM series, extends the information in the first volume VeriSM: A Service Management Approach for the Digital Age. It shows how VeriSM applies to the digitally transforming organization. This includes information around what digital transformation is, approaches to digital transformation and its implications for the entire organization, especially the people. The book explains how to use the VeriSM model, describing the steps to develop, maintain and use the Management Mesh to deliver a new or changed product or service. Within this content, a case study is used to illustrate how to apply the model for each stage and to show the expected outcomes. Implications for the entire organization are stressed throughout the entire volume, reinforcing the concepts of enterprise strategy tying together the organizational capabilities to produce consumer-focused products and services. The second part of the book also includes a wealth of case studies, stories and interviews from organizations and individuals who have a digital transformation journey to share. VeriSM early adopters from around the world provide more information about how they are applying the guidance. Understanding cybersecurity principles and practices is vital to all users of IT systems and services, and is particularly relevant in an organizational setting where the lack of security awareness and compliance amongst staff is the root cause of many incidents and breaches. If these are to be addressed, there needs to be adequate support and provision for related training and education in order to ensure that staff know what is expected of them and have the necessary skills to follow through. Cybersecurity Education for Awareness and Compliance explores frameworks and models for teaching cybersecurity literacy in order to deliver effective training and compliance to organizational staff so that they have a clear understanding of what security education is, the elements required to achieve it, and the means by which to link it to the wider goal of good security behavior. Split across four thematic sections (considering the needs of users, organizations, academia, and the profession, respectively), the chapters will collectively identify and address the multiple perspectives from which action is required. This book is ideally designed for IT consultants and specialist staff including chief information security officers, managers, trainers, and organizations.

VeriSM is a framework that describes a service management approach from the organizational level, looking at the end to end view rather than focusing on a single department. Based around the VeriSM model, it shows organizations how they can adopt a range of management practices in a flexible way to deliver the right product or service at the right time to their consumers. VeriSM allows for a tailored approach depending upon the type of business you are in, the size of your organization, your business priorities, your organizational culture – and even the nature of the individual project or service you are working on. Rather than focusing on one prescriptive way of working, VeriSM helps organizations to respond to their consumers and deliver value with integrated service management practices. Service management plays a leading role in digital transformation. Digital transformation looks outward; with a hyper-focus on the consumer experience. Service management can help shift the mindset from 'inside-out' to 'outside-in' by developing effective, transparent principles that help deliver services that are valuable to the customer. All organizational capabilities must understand: § How does the organization enable and deliver value? § What are the supply chains within an organization that support value delivery? § How do the individual capabilities contribute to or support these supply chains to deliver value?

AI is radically transforming business. Are you ready? Look around you. Artificial intelligence is no longer just a futuristic notion. It's here right now--in software that senses what we need, supply chains that "think" in real time, and robots that respond to changes in their environment. Twenty-first-century pioneer companies are already using AI to innovate and grow fast. The bottom line is this: Businesses that understand how to harness AI can surge ahead. Those that neglect it will fall behind. Which side are you on? In Human + Machine, Accenture leaders Paul R. Daugherty and H. James (Jim) Wilson show that the essence of the AI paradigm shift is the transformation of all business processes within an organization--whether related to breakthrough innovation, everyday customer service, or personal productivity habits. As humans and smart machines collaborate ever more closely, work processes become more fluid and adaptive, enabling companies to change them on the fly--or to completely reimagine them. AI is changing

all the rules of how companies operate. Based on the authors' experience and research with 1,500 organizations, the book reveals how companies are using the new rules of AI to leap ahead on innovation and profitability, as well as what you can do to achieve similar results. It describes six entirely new types of hybrid human + machine roles that every company must develop, and it includes a "leader's guide" with the five crucial principles required to become an AI-fueled business. Human + Machine provides the missing and much-needed management playbook for success in our new age of AI. BOOK PROCEEDS FOR THE AI GENERATION The authors' goal in publishing Human + Machine is to help executives, workers, students and others navigate the changes that AI is making to business and the economy. They believe AI will bring innovations that truly improve the way the world works and lives. However, AI will cause disruption, and many people will need education, training and support to prepare for the newly created jobs. To support this need, the authors are donating the royalties received from the sale of this book to fund education and retraining programs focused on developing fusion skills for the age of artificial intelligence.
