New York Times bestselling author Joseph Finder delivers his next breakneck stand-alone thriller, following 2014's bestseller *Suspicion*. When Rick Hoffman loses his job and apartment, his only option is to move back into—and renovate—the home of his miserable youth, now empty and in decay since his father's stroke. But when he starts to pull it apart, he makes an electrifying discovery that will put his life in peril—and change everything he thought he knew about his father.

For the last 20 years the annual Major Projects Report has highlighted the variable performance of the Ministry of Defence's highest value defence equipment procurement projects, many of which have suffered cost overruns and delays. The NAO is examining the complex cultural and systemic drivers which need to be managed if military capability is to be delivered faster, cheaper and better. Project control is a critical linking factor between a number of the key drivers of successful acquisition, including management information, governance and assurance, risk and cost estimating, and ultimately budgeting and funding. The report describes four main levels of a gold standard practice pyramid: establishing and sustaining the right cultural environment; creating clear structure and boundaries; measuring progress and making decisions focused on successful project delivery; reporting to enable strategic decisions. The report finds the strongest message emerging from the analysis is

that it is the "softer" factors about building and sustaining relationships (the bottom level of the pyramid) upon which success is predicated. There is a wide variety of performance against the gold standard, and this report presents recommendations to help ensure projects adopt practices closer to the standard. The full evidence underlying the recommendations is available on a website - www.naodefencevfm.org.

From the bestselling coauthor of *The Money and the Power*, the “compelling corporate history” (*The National Book Review*) and inside story of the Bechtel family and the empire they’ve controlled since the construction of the Hoover Dam. The tale of the Bechtel family dynasty is a classic American business story. It begins with Warren A. “Dad” Bechtel, who led a consortium that constructed the Hoover Dam. They would go on to “build the world,” from the construction of airports in Hong Kong and Doha, to pipelines and tunnels in Alaska and Europe, to mining and energy operations around the globe. In their century-long quest, five generations of Bechtel men have harnessed and distributed much of the planet’s natural resources, including solar geothermal power. Bechtel is now one of the largest privately held corporations in the world. The Bechtel Group has eclipsed its few rivals, with developments in emerging and third world nations that include secret military installations and defense projects; underground bunkers in Kuwait, Iraq, and Afghanistan; oil pipelines and entire cities in the Middle East; palaces for Arab rulers, such as the Saudi Royal Family; and chemical plants for Arab dictators. Like all stories of empire building, the rise of Bechtel—one of the first mega companies to emerge in the American West—presents a complex and riveting narrative. Veiled in obsessive secrecy, Bechtel has had closer ties to the US government than any other private corporation in modern memory. “Riveting and revealing” (*Kirkus Reviews*), *The Profiteers* is one of the biggest business and political stories of our time.

Starting in the 1950s, US physicists dominated the search for elementary particles; aided by the association of this research with national security, they held this position for decades. In an effort to maintain their hegemony and track down the elusive Higgs boson, they convinced President Reagan and Congress to support construction of the multibillion-dollar Superconducting Super Collider project in Texas—the largest basic-science project ever attempted. But after the Cold War ended and the estimated SSC cost surpassed ten billion dollars, Congress terminated the project in October 1993.

Drawing on extensive archival research, contemporaneous press accounts, and over one hundred interviews with scientists, engineers, government officials, and others involved, *Tunnel Visions* tells the riveting story of the aborted SSC project. The authors examine the complex, interrelated causes for its demise, including problems of large-project management, continuing cost overruns, and lack of foreign contributions. In doing so, they ask whether Big Science has become too large and expensive, including whether academic scientists and their government overseers can effectively manage such an enormous undertaking.

The author meets entrepreneur Jim on a 1988 North Pole adventure, discover they are both Africa enthusiasts. Returning from a waspish over the Andes pipeline experience in 1995, Jim recruits him for Africa to produce a feasibility study to obtain a 40,000 acre Indian Ocean look-alike San Francisco Peninsula development offered personally by Mozambique's President. The project goes through several near death experiences, end up an inimitable world class international tourist destination project. Jim has the largest wildlife refuge development by private enterprise on record, a 914 Sq Mi wildlife ecotourism development which safeguards the UN's botanically diverse region. But Jim fails to develop it, dies in 1999. The author now targets recruiting a billionaire or Disney to fund expanding to 4000 Sq Mi to connect to the nearby 38,500 Sq Mi worlds' largest

wildlife refuge, to provide range to save 5000 Kruger elephants slated for mercy killing for overgrazing. This very practical guide describes the whole process of contracting for goods and services, from selecting tenderers to placing a contract. It details the key topics that are necessary for success, such as contract strategy, contract types, contract law and evaluating tenders. Whilst the book also addresses the project context in which purchasing takes place, the subject matter could equally be applied to any business context. The treatment of the subject assumes no prior knowledge but, at the same time, provides the experienced person with new, and sometimes unconventional, insights into the subject. The book includes personal experiences, cases and exercises in order to root the subject into the real world. The Project Manager's Guide to Purchasing has been structured so that the reader can choose the chapter topic areas that they wish to study in isolation. Where necessary references are provided to complement the individual chapters. Illustrations of key documents in the purchasing and contracting process are also provided.

Why has the clean, limitless energy promised by fusion always seemed just out of reach? Search for the Ultimate Energy Source: A History of the U.S. Fusion Energy Program, explains the fundamentals and concepts behind fusion power, and traces the development of fusion historically by

decade—covering its history as dictated by US government policies, its major successes, and its prognosis for the future. The reader will gain an understanding of how the development of fusion has been shaped by changing government priorities as well as other hurdles currently facing realization of fusion power. Advance Praise for Search for the Ultimate Energy Source: “Dr. Dean has been uniquely involved in world fusion research for decades and, in this book, describes the complicated realities like few others possibly could.” -Robert L. Hirsch, a former director of the US fusion program, an Assistant Administrator of the US Energy Research and Development Administration (ERDA); an executive at Exxon, Arco, and the Electric Power Research Institute (EPRI); and lead author of the book *The Impending World Energy Mess* (Apogee Prime Books, 2009). “In this book, Dr. Dean provides the many reasons why fusion has progressed more slowly than many had hoped. Budget is usually cited as the culprit, but policy is equally to blame. Facilities have been closed down before their jobs were done—or in some cases, even started. It seems this situation has become endemic in fusion, and if one thinks about it, in other nationally important Science and Technology initiatives as well.” -William R. This book constitutes the refereed proceedings of the Second International Conference on Knowledge Science, Engineering and Management, KSEM 2007, held in Melbourne, Australia, in November 2007. The 42 revised full papers and 28 revised short papers presented together with five invited talks were carefully reviewed and selected. The papers provide new ideas and report research results in the broad areas of knowledge science, knowledge engineering, and knowledge management.

"Whatever you dream, begin it, for boldness has genius, power and magic in it." -Goethe What qualities brought America to its dominance of world industry? How will American technology fare in the new global marketplace? What upbringing, education, and personal traits are required to produce leaders who can succeed in this new world? Scan the bookstore shelves and you'll see dozens of attempts by authors to capture the essence of leadership and entrepreneurial success. In *The Power of Boldness*, the answers come from original sources: ten of the country's most successful business leaders, who share their experiences and insights in individual essays that are remarkable for

their directness and personal detail. Six of the writers are inventors who created the enterprises to commercialize their ideas--four assumed management of their fathers' companies and moved into new industrial and geographic markets. Born between 1897 and 1962, these outstanding figures collectively chronicle America's industrial rise since World War II--and share their perspectives on what lies ahead in the age of technology. In engaging and often humorous terms, these men describe how they managed to make the most of the economic and social ups and downs of the past decades--how boldness, clear thinking, and a willingness to learn saw them through the bad times and paved the way to their success. No other book gathers so distinguished a group of business figures-- Stephen D. Bechtel, Jr., of Bechtel Group describes the rise, decline, and rise again of the world's largest heavy construction company. William M. Haney, III, of Molten Metal Technology--a strong believer in Goethe's maxim--overviews the opportunities in ecotechnology. Edward C. Johnson 3d, of Fidelity writes on the adventures of a "contrarian" in the financial arena. Gordon E. Moore of Intel explains how his firm became one of the world's largest producers of microprocessor chips and forecasts the future of the electronics industry. John F. Taplin, master inventor and founder of a number of companies, writes on the education of an

inventor/entrepreneur. Thomas D. Cabot of Cabot Corporation, Robert Galvin of Motorola, George N. Hatsopoulos of Thermo Electron Corporation, and Ralph Landau of Halcon International, round out this group of master builders of America's industrial power. In an introduction and summing-up, Alfred Chandler, Jr., Pulitzer Prize-winning business historian, explores some of the themes that emerge from the personal essays. Capturing the spirit of innovation as well as the practicalities of business decision making, *The Power of Boldness* will be required reading for business executives, students of business, and anyone interested in the individual success stories behind America's technological leadership.

The approach to project management is too often formulaic, describing what should be done, but not describing why those actions are important. This book outlines the what and how of project management, emphasizing why actions matter, the overall intention of the formulaic steps, and the strengths or weakness of various tools and techniques.
