A Historical and Contemporary Look at Psychological Systems offers a novel approach to examining the history and current state of scientific psychology. This boldly original volume analyzes the systems of psychology in an innovative new way. The author provides interconnectedness to, as well as the distinctiveness of, the diverse theoretical approaches to psychology. The book revisits the roots of psychology and traces them to the current state of the field, both theoretically and methodologically. Readers will gain a clearer understanding of the foundational differences and similarities that currently exist in psychological theories. The volume reviews four broad systems of psychology: behavioral, cognitive, humanistic, and psychodynamic. Evolutionary and neuro- psychology are considered as additional approaches that influence all four psychological systems. The book opens with the historical background that led to the emergence of the four systems. It traces the concept of the soul through the periods of the ancient Greeks and Romans to the beginnings of psychology as an empirical science. Differences and similarities of the four systems are then explored with respect to eight fundamental psychological issues: consciousness, reductionism, teleology, determinism, values, spirituality, therapy, and psychological research procedures. Intended for advanced undergraduate or beginning graduate level courses in the history and systems of psychology, this book will also appeal to researchers in this area. To facilitate the book's use as a textbook, it features discussion questions at the end of each chapter.

This book provides basic information to conduct experiments and analyze data in the behavioral, social, and biological

The challenges to humanity posed by the digital future, the first detailed examination of the unprecedented form of power called "surveillance capitalism," and the quest by powerful corporations to predict and control our behavior. In this masterwork of original thinking and research, Shoshana Zuboff provides startling insights into the phenomenon that she has named surveillance capitalism. The stakes could not be higher: a global architecture of behavior modification threatens human nature in the twenty-first century just as industrial capitalism disfigured the natural world in the twentieth. Zuboff vividly brings to life the consequences as surveillance capitalism advances from Silicon Valley into every economic sector. Vast wealth and power are accumulated in ominous new "behavioral futures markets," where predictions about our behavior are bought and sold, and the production of goods and services is subordinated to a new "means of behavioral modification." The threat has shifted from a totalitarian Big Brother state to a ubiquitous digital architecture: a "Big Other" operating in the interests of surveillance capital. Here is the crucible of an unprecedented form of power marked by extreme concentrations of knowledge and free from democratic oversight. Zuboff's

comprehensive and moving analysis lays bare the threats to twenty-first century society: a controlled "hive" of total connection that seduces with promises of total certainty for maximum profit -- at the expense of democracy, freedom, and our human future. With little resistance from law or society, surveillance capitalism is on the verge of dominating the social order and shaping the digital future -- if we let it. The Shift is not about what to eat or not eat. It's not about when to eat. It's about building thinking habits, proven through science, that help you lose weight. There are so many myths surrounding weight loss: Setbacks mean failure. Big results require big goals. You need to power through alone. You have to hate your body to lose weight. Happiness awaits you only at the end of the journey. All of these are untrue, unhelpful—and actually undermine long-term weight loss. Dr. Gary Foster's 7 Mindset Shifts show you how to—and why you should—treat yourself in a way that feels better and primes you for likelier success. His argument and the techniques in each chapter, built on years of research and breakthroughs in cognitive behavioral therapy and positive psychology, can lead to results on the scale—but, more important, in your own thinking. The Shift flips old-fashioned weight-loss theory on its head, training you to recognize when your thinking is taking you away from your goals, to focus on action rather than outcome, and to value non-scale victories more than the number on the digital display. It's evidence-based motivation—and it really works! The 7 Mindset Shifts include treating yourself with compassion, leaning into your strengths, appreciating the power of small steps (and more frequent rewards), finding your people, and truly relaxing into happiness and gratitude. "Diet thinking" isn't habit-forming; mindset shifts are. And muscular yet kind mental habits, like the ones found in The Shift, are key to long-term, positive change.

Discrete-trials teaching, or DTT, is a very important teaching technique developed by behavior analysts. The DTT Manual has taught numerous groups of individuals to conduct DTT with children with autism in as quickly as 6 hours. The manual is the product of the joint work of Dr. Daniela Fazzio, PhD, BCBA-D and Dr. Garry L. Martin, PhD, Distinguished Professor of Psychology. The manual addresses an area of much need in the field of autism treatment; effective and efficient training for parents and professionals. It was written with them in mind and it has been empirically tested several times, with several university students, paraprofessionals, and parents. It will be easy to navigate for individuals with a high school diploma, regardless of any prior experience in psychology or special education.

Using a unique behavioral assessment and treatment planning framework, the updated Sixth Edition provides a

Many professionals read journals such as The International Journal of Sports, Journal of Sport Behavior, Journal of Applied Sport Psychology, Research Quarterly for Exercise and Sport, and The Sport Psychologist. In August 2008, Monitor on Psychology, the monthly publication of the American Psychological Association (APA), featured a special issue on sport psychology. Indeed, Division 47 of APA is devoted to "the scientific, educational, and clinical foundations of exercise and sport psychology." The North American Society for the Psychology of Sport and

Physical Activity (NASPSPA) and the Association for the Advancement of Applied Sport Psychology (AAASP) convene conferences each year to present scientific findings and new developments in a rapidly expanding field. The AAASP and other organizations also qualify professionals as certified sport and exercise psychology consultants. Finally, a visit to any bookstore will reveal the lay public's fascination with sports, as revealed in numerous self-help books and guides to perfecting athletic performance. Behavioral psychologists have studied sport psychology for more than three decades (Martin, Thompson, & Regehr, 2004). Applied behavior analysis (ABA), in particular, has been an instrumental approach to behavioral coaching in many sports, including baseball (Osborne, Rudrud, & Zezoney, 1990), basketball (Pates, Cummings, & Maynard, 2002), figure skating (Ming & Martin, 1996), football (Ward & Carnes, 2002), golf (Pates, Oliver, & Maynard, 2001), ice hockey (Rogerson & Hrycaiko, 2002), soccer (Brobst & Ward, 2002), swimming (Hume & Crossman, 1992), and tennis (Allison & Ayllon, 1980). ABA stresses the application of learning theory principles, objective measurement of athletic skills, controlled outcome evaluation, and socially significant behavior-change. Cognitive behavior therapy, or CBT, also has been a dominant approach to psychological intervention in sports (Meyers, Whelan, & Murphy, 1996; Weinberg

& Comar, 1994). CBT addresses athletic performance through cognitive-change methods combined with behavioral practice and environmental modifications. The purpose of the book described in this proposal is to compile the most recent experimental and applied research in behavioral sport psychology. Several journal articles have reviewed critical dimensions of behavioral sport psychology (Martin et al., 2004; Martin, Vause, & Schwartzman, 2005) but no book has covered the topic with an emphasis on ABA and CBT methodology and practice. Accordingly, Behavioral Sport Psychology: Evidence-Based Approaches to Performance Enhancement is a first of its kind volume.

Increasing media scrutiny, global coverage and communication via the internet means corporate reputation can be damaged quickly, and failing to successfully address challenges to corporate reputation has consequences. Companies generally suffer almost ten times the financial loss from damaged reputations than from whatever fines may be imposed. According to Ernst & Young, the investment community believes up to 50 per cent of a company's value is intangible - based mostly on corporate reputation. So recognizing potential threats, or anticipating risks, emerges as a critical organizational competence. Organizations can regain lost reputations, but recovery takes a long

time. Corporate Reputation contains both academic content along with practical contributions, developed by those serving as consultants or working in organizations in the area of corporate reputation and its management or recovery. It covers: why corporate reputation matters, the increase in reputation loss, threats to corporate reputation, monitoring reputation threats online and offline, the key role of leadership in reputation recovery, and making corporate reputation immune from threats. Any book that is going to do justice to a subject that is so complex and intangible needs imagination, depth and range, and this is exactly what the contributors bring with them.

For over a century and a quarter, the science of learning has expanded at an increasing rate and has achieved the status of a mature science. It has developed powerful methodologies and applications. The rise of this science has been so swift that other learning texts often overlook the fact that, like other mature sciences, the science of learning has developed a large body of knowledge. The Science of Learning comprehensively covers this knowledge in a readable and highly systematic manner.

Methodology and application are discussed when relevant; however, these aspects are better appreciated after the reader has a firm grasp of the scientific knowledge of learning processes.

Accordingly, the book begins with the most fundamental and well-established principles of the science and builds on the preceding material toward

greater complexity. The connections of the material with other sciences, especially its sister science, biology, are referenced throughout. Through these frequent references to biology and evolution, the book keeps in the forefront the recognition that the principles of learning apply to all animals. Thus, in the final section the book brings together all learning principles studied in research settings by demonstrating their relevance to both animals and humans in their natural settings. For animals this is the untamed environment of their niches; for humans it is any social environment, for *Homo sapiens* is the social and learning animal par excellence.

Lifestyle Medicine: Lifestyle, the Environment and Preventive Medicine in Health and Disease, Third Edition, is an adjunct approach to health practice that seeks to deal with the more complex modern determinants of chronic diseases—primarily lifestyle and the environments driving such lifestyles—in contrast to the microbial ‘causes’ of infectious disease. Our lifestyle choices have a profound effect on our health. As we live longer, one thing is clear: many of us will spend time living with injury and chronic illness due to our own choices. Changes in health patterns typically follow shifts in living conditions. Disease patterns have changed worldwide, from infectious to chronic diseases such as obesity, diabetes, and heart disease. This change has been so emphatic—nearly 70% of all presentations to a doctor in modern western societies are now chronic disease related—that medical services are being forced to change to accommodate this. New chapters in this third edition explain the link between energy intake and expenditure; consider how modern technology are determinants of chronic disease; show how environmental influences, such as endocrine disruptors, influence our health; and summarize

Explores the relationship between lifestyle and environmental drivers and the major modern chronic diseases Outlines the knowledge and skills bases required by health professionals to deal with lifestyle and environmental determinants of chronic disease, as well as the tools and procedures available for doing this Develops pedagogy for Lifestyle Medicine that will enable it to become a practical adjunct to conventional health and medical practice Features new chapters explaining the link between energy intake and expenditure, and more

It summarizes current evidence-based approaches to behavior change in chapters authored by leading theorists, researchers, and practitioners from multiple disciplines, including psychology, sociology, behavioral science, economics, philosophy, and implementation science. Motivation: A Biosocial and Cognitive Integration of Motivation and Emotion shows how motivation relates to biological, social, and cognitive issues. A wide range of topics concerning motivation and emotion are considered, including hunger and thirst, circadian and other biological rhythms, fear and anxiety, anger and aggression, achievement, attachment, and love. Goals and incentives are discussed in their application to work, child rearing, and personality. This book reviews an unusual breadth of research and provides the reader with the scientific basis for understanding motivation as a major variable in human and animal life. It also offers insights that can be applied to immediate and practical problems. Various areas are examined in depth, such as the relationships between reward, incentives, and motivation. The discussion of biological rhythms shows that humans and animals are more alert at certain times than others, and these rhythms also affect performance. The topics in the book span the ways in which motivation connects with many aspects of contemporary psychology. Basic issues of design and methodology, details of research procedures, and important aspects of definition and measurement, are discussed throughout the book. Motivation: A Biosocial and Cognitive Integration of Motivation and Emotion examines the way

motivation functions and how it interacts with other important variables: physiological processes; learning, attention, and memory; rewards and stressors; the role of culture as well as species characteristics. The presentation makes clear in what important ways motivation, as a construct, contributes to the scientific understanding of behavior. The book offers advanced undergraduate and graduate students a broad overview of motivation. It also is of value for the professional psychologist who seeks an integrated overview of the classical and contemporary literature in the field of motivation. The book provides information on a broad range of issues and thus can be used also as supplementary reading for courses on cognition and biological as well as social psychology.

Ethnoecology has blossomed in recent years into an important science because of the realization that the vast body of knowledge contained in both indigenous and folk cultures is being rapidly lost as natural ecosystems and cultures are being destroyed by the encroachment of development. Ethnobotany and ethnozoology both began largely with direct observations about the ways in which people used plants and animals and consisted mainly of the compilation of lists. Recently, these subjects have adopted a much more scientific and quantitative methodology and have studied the ways in which people manage their environment and, as a consequence, have used a much more ecological approach. This manual of ethnobotanical methodology will become an essential tool for all ethnobiologists and ethnoecologists. It fills a significant gap in the literature and I only wish it had been available some years previously so that I could have given it to many of my students. I shall certainly recommend it to any future students who are interested in ethnoecology. I particularly like the sympathetic approach to local peoples which pervades this book. It is one which encourages the ethnobotanical work by both the local people themselves and by academically trained researchers. A study of this book will avoid many of the arrogant approaches of the past and encourage a fair deal for any group which is being studied. This manual promotes both the involvement of local people and the return to them of knowledge which has been studied by outsiders.
