Providing practical advice to students on how to write for biology, this book shows how to write for a particular audience, self evaluate drafts, and paraphrase for improved comprehension. Virtual Biology Laboratory (VBL) is a series of 30 exercises, organized into 10 modules. These online laboratory simulations enable students to make comparative observations, set up experiments, acquire data, and draw conclusions on a variety of topics. Each exercise is accompanied by suggested activities, a worksheet, a self-test for each exercise and module, and an instructor's answer key. This set of on-line laboratory experiments is designed within a simulation format to enable students to actually "do" science by acquiring data, performing experiments, and using that data to explain biological concepts or phenomenon. Students can

do all this while working from their school's computer lab, dorm room desk top, or home computer. Instructors can use the virtual lab experiments to supplement the experience of a wet lab and to introduce biology students to the same techniques and equipment currently being used in many research laboratories. Online labs allow students to use expensive or otherwise unavailable laboratory equipment or supplies. VBL is also available via WebTutor where follow-up questions for each exercise and module are submittable to the Blackboard or the WebCT system. This allows instructors to evaluate the student's understanding of the lab they have completed. VBL does not need to be purchased in addition to Blackboard or WebCT--buying just the Blackboard version or the WebCT version provides access to all the modules and their content. There is no price difference to add WebCT or Blackboard. To see descriptions and/or demos of the 10 modules, visit [http://www.brookscole.com/biology\\_d/vbl/](http://www.brookscole.com/biology_d/vbl/). Visit the link to see the Genetics module in WebCT (<http://thomsondemo.webct.com/public/0534464955demo/index.html>) This breakthrough combination of current technology and traditional laboratory is a virtual experiment that can serve as either an alternative or a supplement to the traditional wet laboratory. One of the most important features of this laboratory manual is the infusion of thinking and problem solving skills with the content areas. Activities and questions within an exercise build on previously learned information and encourage students to transfer information from one section of the course to another. All content and problem solving goals are accomplished by using a simple, non-threatening approach to the lessons. Even students with little science background are able to get involved and master the material. These exercises are cost effective and affordable. Typical schools will have most of the equipment needed to perform

the experiments. Each exercise is designed for use in a three-hour laboratory period, but can be easily adapted to accommodate two-hour or ninety-minute sessions. To provide maximum flexibility for instructors, each exercise is broken down into several activities. Activities can be deleted or presented as demonstrations without diminishing the value of the remaining components. Many activities throughout the manual are suitable for use in online sections. Mader includes revised coverage of animal behaviour and ecology as well as a wealth of new focus boxes which highlight topics of high interest and relate biology to everyday life.
