**Leadership: Enhancing the Lessons of Experience**, 10e, now consists of 18 chapters, four of which cover specific leadership skills and qualities covered in each of the book's four sections. Hughes, Ginnett, and Curphy draw upon three different types of literature - empirical studies; interesting anecdotes, stories, and findings; and leadership skills - to create a text that is personally relevant, interesting, and scholarly. The authors' unique quest for a careful balancing act of leadership materials helps students apply theory and research to their real-life experiences. The 10th edition has been thoroughly updated in virtually every chapter, including new content specific to how leaders respond to crisis (related to the pandemic).

**Mind Design: The Adaptive Organization of Human Nature, Minds, and Behavior** does what most books on the subject don't do. It deals with the "big questions" in psychology and philosophy from an evolutionary neuroscience perspective. This highly readable volume provides a provocative look at the evolutionary origins and neurophysiological underpinnings of mind—including free will, the self, biological origins of the duality of human moral nature, human mate value and mate selection, the sensory/perceptual systems as adaptive virtual reality machines, and the emotions, intelligence, and consciousness as evolved psychological adaptations.

For undergraduate and graduate-level courses in leadership. An exploration of what makes an effective leader Leadership in Organizations, 9th Edition provides a balance of theory and practice as it covers the major theories and research on leadership and managerial effectiveness in formal organisations. Rather than detailing an endless series of studies or prescribing exactly how leaders must operate, it sticks to the major findings and offers recommendations for improving managerial effectiveness. Using this approach, readers understand the implications of their decisions and can determine the best courses of action specific to the situation. With new examples, citations, and guidelines for better clarity and presentation, the text is a relevant and useful tool for students who expect to become managers in the near future.

Focusing on experimental methods, authors Anne Myers and Christine Hansen lead students step by step through the entire research process, from generating testable hypotheses to writing the research report. Jones and George are dedicated to the challenge of "Making It Real" for students. As a team, they are uniquely qualified to write about the organizational challenges facing today's managers. No other author team in the management discipline matches their combined research and text-writing experience. Essentials of Management concisely surveys current management theories and research. Through a variety of real world examples from small, medium, and large companies the reader learns how those ideas are used by practicing managers. The organization of this text follows the mainstream functional approach of planning, organizing, leading, and controlling; but the content is flexible and encourages instructors to use the organization they are most comfortable with. The themes of diversity, ethics, and information technology are clearly evident through in-text examples, photographs, "unboxed" stories, and the end-of-chapter material - all areas of importance that truly serve to bring to life the workplace realities that today's student will encounter in the course of a career.
