Ontologies tend to be found everywhere. They are viewed as the silver bullet for many applications, such as database integration, peer-to-peer systems, e-commerce, semantic web services, or social networks. However, in open or evolving systems, such as the semantic web, different parties would, in general, adopt different ontologies. Thus, merely using ontologies, like using XML, does not reduce heterogeneity: it just raises heterogeneity problems to a higher level. Euzenat and Shvaiko's book is devoted to ontology matching as a solution to the semantic heterogeneity problem faced by computer systems. Ontology matching aims at finding correspondences between semantically related entities of different ontologies. These correspondences may stand for equivalence as well as other relations, such as consequence, subsumption, or disjointness, between ontology entities. Many different matching solutions have been proposed so far from various viewpoints, e.g., databases, information systems, and artificial intelligence. The second edition of *Ontology Matching* has been thoroughly revised and updated to reflect the most recent advances in this quickly developing area, which resulted in more than 150 pages of new content. In particular, the book includes a new chapter dedicated to the methodology for performing ontology matching. It also covers emerging topics, such as data interlinking, ontology partitioning and pruning, context-based matching, matcher tuning, alignment debugging, and user involvement in matching, to mention a few. More than 100 state-of-the-art matching systems and frameworks were reviewed. With *Ontology Matching*, researchers and practitioners will find a reference book that presents currently available work in a uniform framework. In particular, the work and the techniques presented in this book can be equally applied to database schema matching, catalog integration, XML schema matching and other related problems. The objectives of the book include presenting (i) the state of the art and (ii) the latest research results in ontology matching by providing a systematic and detailed account of matching techniques and matching systems from theoretical, practical and application perspectives.

St. Rose of Lima (Isabel Flores y Oliva, 1586-1617) was canonized in 1671 as the first saint of the New World and Patron of the Americas. In this engrossing new biography, Frank Graziano offers the most comprehensive examination of the life of Rose to appear in any language. An obscure, self-mortifying mystic, Rose seems a strange choice for the distinction of first American saint. Graziano argues that the cult that grew up around St. Rose during her life and greatly expanded after her death was seen by both Church and State as a challenge and even a threat to authority. For that reason, he contends, the Church acted quickly to render her harmless by "bringing her into the fold." Graziano goes on to consider Rose's ascetic Christianity in its cultural context. He seeks to discover why the severe austerities and mortifications of female piety that today are regarded as psychopathological were lauded as exemplary means of worship in the seventeenth century. In fact, he shows, St.; Rose's behavior and experiences were initially regarded as pathological by many significant observers within her own culture,

but such assessments were gradually dismissed as her saintly image was constructed. Drawing on key archival sources and the insights offered by psychoanalytic theory, Graziano constructs a compelling portrait of one of the Catholic Church's most beloved saints.
