Competition, the drive for efficiency, and continuous improvement ultimately push businesses toward automation and later towards autonomy. If a business can operate without human intervention, it will minimize its operational cost. If Uber can remove the expense of a driver with an autonomous vehicle, it will provide its service cheaper than a competitor who can't. If an artificially intelligent trading company can search, find, and take advantage of some arbitrage opportunity, then it can profit where its competitors cannot. A business that can analyze and execute in real-time without needing to wait for a human to act, is a business that will be able to take advantage of brief inefficiencies from other markets or businesses. This trend following a thesis that is based on 100 years of proven economic theory. Short-wave economic cycles, those 5- to 10-year cycles, are driven by credit but the long-wave economic cycles, those 50- to 60-year cycles, are driven by technological revolution. We've had 5 cycles over the past 200 years with the last wave, the Age of Information & Telecommunications. We've seen evidence that a new cycle has begun. Technological revolutions come by way of a cluster of new innovations. About a decade ago, you started to see AI, robotics and IoT (sensors) delivering on automation. That's been powerful, but not transformational. It does not force businesses to fundamentally change how they do business. The last piece of the puzzle was cryptocurrency because it allows us to process and transfer economic value without human intervention. Soon, there will be a global race to build autonomous operations. Businesses and organizations without autonomous operations simply will not be able to compete with those that do because ... autonomy is the

ultimate competitive advantage. Crypto is the mechanism that will accrue value from being the infrastructure for the next digital financial revolution. Crypto Asset Investing lays out a case that we've begun a new technological revolution similar to the Internet Age of the 1990's. Artificial intelligence, the Internet of Things, robotics and cryptocurrency are converging to deliver on a new age, what I call the Age of Autonomy. Understanding the transformation that's taken place before anyone else can yield enormous investment opportunity. In this book, you'll learn how and why to invest in crypto assets.

But bitcoin, the most famous of the cybermoneys, brings with it a reputation for instability, wild fluctuation, and illicit business; some fear it has the power to eliminate jobs and to upend the concept of a nation-state. It implies, above all, monumental and wide-reaching change - for better and for worse. But it is here to stay, and you ignore it at your peril. me give you an example using one of my personal favorite cryptocurrencies, Litecoin. On March 20, 2017, 1 Litecoin was worth exactly \$3.96. Just a mere 5 and 1/2 months later in September, Litecoin was worth \$81.78. That is a 1,965% increase in less than 6 months. And it's not like this huge jump came completely out of the blue. Many skilled investors who were involved with and studied cryptocurrencies saw this coming, and everyone who did benefited massively from it. A realistic and relatively small investment of \$5,000 back in March of 2017, would be worth nearly \$100,000 just 6 months later. This is the kind of potential we are dealing with when investing in cryptocurrencies. This is not what you should expect once you begin investing, but it is a possibility. You should also be focused on the long term instead of trying to get rich quick as that very rarely works out the way you want it to. In this book, we will cover the ins and outs of getting started as a cryptocurrency investor and how you can set up a balanced investment portfolio that can financially set you up very well for the future. Bitcoin, blockchain, and cryptocurrencies burst onto the world stage in 2008, when the online posting of a pseudonymous white paper provided a vision of a new way to transfer value over the internet. In the decade-plus since, the cryptoasset market has gone through all the classic phases of a disruptive technology: massive bull markets and crushing pullbacks, periods of euphoria and moments of despair, FOMO (fear of missing out), fear, and everything in between. As the cryptomarket enters its second decade, one thing is clear: Crypto is not going away. Cryptoasset markets are rallying toward new all-time highs, and many of the world's largest investors and financial institutions are getting involved. Investors looking into crypto, however, face significant

challenges. The quality of information is poor. Theories about the drivers of cryptoasset valuations are untested and often poorly designed, and they are rarely—if ever—published in peer-reviewed journals. Due diligence efforts from leading consultants are in their infancy, and few people have carefully thought through the role (if any) that cryptoassets should have in a professionally managed portfolio. Without a doubt, Cryptocurrency has proved to be the next big thing to have ever happen to humanity in finance after the discovery of gold over five thousand years ago. Not only that Cryptocurrency especially bitcoin is on its way to replace gold as the world accepted means of storing value that appreciate. However, despite all the progress Cryptocurrency has made so far there are many more which the crypto market would still experience and you too can be part of this and take advantage of the opportunity in this financial market. The blockchain is an online distributed public ledger of all digital transactions that have taken place. It is digital currency's equivalent of a high street bank's ledger that records transactions between individuals, but it couldn't function without the trust that is formed from the ability to accurately record the digital currency between parties. It is decentralised in that, unlike a traditional bank which is the holder of an authorised money ledger of its holders' voting that block chain ledger is shared among all members of the network and is not subject to the terms and conditions of any particular financial institution or country. The benefits of the blockchain are to improve the way we communicate, bank, manage our assets and limit the imagination of the world in the Crypto Community and the willingness of institutions to change.
