Blender 2.8 parametric modelingWith parametric controls in 3D objects, you will find properties that have a relation to the purpose of an object. For instance, a staircase would have properties to control step count, width, and height. By updating any of those properties would mean a direct change to the 3D model.Those are parametric controls that will help you reuse 3D models in several projects with a simple update on properties.In Blender 2.8, you won't find any parametric controls for 3D models as a default option. You will have to add those controls using a particular group of tools. To add those controls to 3D objects in Blender, we will use Hooks, Shape Keys, Drivers, and Custom Properties.If you want to learn how to use those tools in projects related to 3D modeling, you will find lots of examples and explanations in the book about them. You will create objects like a parametric chair and a staircase.- Understand what are parametric controls- Prepare a model to receive parametric controls- Add Hooks to parts of a model for deformation controls- Use Shape Keys to create different

popular, there is a demand to take your modeling skills to the next level. This learning path is divided into three modules that will take you on this incredible journey of creating games. The first module will take you on a journey to understand the workflow normally used to create characters, from the modeling to the rendering stages, using the tools of the last official release of Blender exclusively. You will be making production-quality 3D models and characters quickly and efficiently, which will be ready to be added to your very own animated feature or game. The second module will help you develop a comprehensive skill set that covers the key aspects of mechanical modeling. You will create many types of projects, including a pistol, spacecraft, robot, and a racer. By the end of this module, you will have mastered a workflow that you will be able to apply to your own creations. The final module will help you to create many types of projects using a step-by-step approach. Each project in this module will give you more practice and increase your knowledge of the Blender tools and game engine. Annotation Blender 3D is a popular, open source modeling and animation package. It is used for game design, architectural visualization, character design, animation, and still images. However, creating believable lighting and texturing is difficult in any 3D program. This step-by-step tutorial aims to familiarize you with Blender's new interface and basic features as well as take a look at what it takes to produce a believable scene using lighting, texturing, compositing, and rendering. By using the example of a tricycle in an outdoor scene you will learn to establish an effective workflow to increase your productivity. You will also thoroughly studying the scene and deciding how your tricycle would look on a sunny, cloudless day using Blender lamps. Not just that, you will also learn to implement your decisions by applying a 3-point light rig, adjusting the color of the lights, adding shadows, and using light groups to control the lighting. You will learn to add ambient occlusion effects to your scene by using both ray-traced and approximated ambient occlusion algorithms. A mesh example shows you how to give a particular look or "feel" by adding and editing materials. You will light a wine bottle on a table by taking a look at lighting interior spaces and how to

create complex light rigs and custom UV textures for your scenes using Blender's UV editing capabilities. You will create a custom UV map, export it as a file type Blender can read, and finally add your UV map to the wine bottle mesh. In the same example you will add wood material to booths. You will further enhance the background by adding wallpaper, giving color and metallic tint to the lamps, and adding material to light bulbs. You will look at lighting techniques used in scenes that include both interior and exterior light sources in a scene that has sunlight traveling in through the window and a light bulb hanging from the ceiling. A step-by-step guide, with practical examples, that builds up your knowledge of lighting and rendering in Blender and helps you to implement these various techniques in your own work

What you will learn from this book :

- Optimize Blender's Internal Renderer for your projects
- Establish a well-tested and efficient workflow to constantly produce high-quality work
- Apply both ray-traced and approximated ambient occlusion to your scene
- Configure the default settings of ambient occlusion by manipulating parameters such as Sampling, Attenuation, and Influence
- Configure settings found with Blender's materials to create, duplicate, and add special effects such as transparency and reflections to your materials
- Modify World settings to add a gradient effect to the background to create a more interesting render
- Separate your scene into layers to light the scene using a

complex light rig Construct a complex light rig and link lights to specific layers
Add indirect lighting and integrate it with your scene Add textures to materials
Enhance your scene by using Blender's node compositor Simulate light "bending"
with 3D lighting techniques Illuminate dark corners and crevices in your scene
using ambient light Set up the basic material and then add textures and look at
many different materials with varying properties such as plastic, metal, glass,
wood, brick, marble, and concrete Approach Each chapter develops a different
aspect of a Blender technique. The book is essentially a step-by-step tutorial,
which builds up your knowledge throughout. It has practical examples such as
lighting a tricycle in open space, lighting a wine bottle on a table, and lighting a
room that has a lamp as well as sunlight coming in through the window. These
examples will show you how to implement the different Blender techniques in
your work. Who this book is written for If you are a Blender user and you want to
improve the quality of your renders, this book is for you. You need to have
experience in Blender and know your way around the Blender interface. You may
be a professional or freelancer or hobbyist willing to increase the quality of your
portfolio and interested in adding perfection to your renders.
