The supply and administration of medicines is an area of practice in which a number of healthcare professionals (e.g. nurses, pharmacists and allied health professionals) are involved. Prescribing is a relatively new role which many of these healthcare professionals have adopted. Medication Safety focuses on promoting safety in the delivery of medicines. Chapters explore the various stages in the medication process including safety in prescribing, dispensing and administering drugs. Adverse reactions, parenteral administration, dosage calculations, safety with controlled drugs, and reporting errors and near misses are all addressed in evidence-based contributions from a highly experienced team of contributors. This text is essential reading for all healthcare professionals involved in the delivery of medicines to patients.

Now in its second edition, this highly successful guide to safe prescribing of the most common classes of drugs is your starting point for safe and effective practice. The first edition was a direct response to requests from students for a compendium of the 100 most important drugs in the NHS. Research led by Professor Emma Baker identified the 'top 100 drugs' by their importance and prescribing frequency. The top 100 drugs and the five most important intravenous fluids are presented using a clear, consistent layout across double-page spreads. Drugs are arranged alphabetically and also listed by organ system and clinical indication, providing multiple pathways into the information. Clinical pharmacology is discussed under the headings: common indications; mechanisms of action; important adverse effects; warnings; and important interactions. Practical prescribing is discussed under the headings: prescription; administration; communication; monitoring; and cost. A clinical tip is presented for every drug. Single-best-answer questions are provided for self-assessment and to show how information from several drugs may be integrated.

This book is available as open access through the Knowledge Unlatched programme and is available on [www.bloomsburycollections.com](http://www.bloomsburycollections.com). We need to talk about Hippocrates. Current scholarship attributes none of the works of the 'Hippocratic corpus' to him, and the ancient biographical traditions of his life are not only late, but

also written for their own promotional purposes. Yet Hippocrates features powerfully in our assumptions about ancient medicine, and our beliefs about what medicine – and the physician himself – should be. In both orthodox and alternative medicine, he continues to be a model to be emulated. This book will challenge widespread assumptions about Hippocrates (and, in the process, about the history of medicine in ancient Greece and beyond) and will also explore the creation of modern myths about the ancient world. Why do we continue to use Hippocrates, and how are new myths constructed around his name? How do news stories and the internet contribute to our picture of him? And what can this tell us about wider popular engagements with the classical world today, in memes, 'quotes' and online?
