RICHARD HARDING DAVIS, a Philadelphia-born journalist, led a mythic life, one full of adventure, high drama, and at least one close call with Germans who thought he was a spy during World War I. Davis was a respected reporter and editor who described foreign events to the U.S. during the late 1800s and early 1900s. He covered the globe while working as war correspondent for Harper's and other publications, and reported on the Spanish War, the Spanish-American War in Cuba, and the Boer War. During World War I, he was captured by the Germans, who accused him of being a British spy. His reporting also helped to create the Rough Riders legend associated with Teddy Roosevelt. He collected many of his articles in the books Rulers of the Mediterranean, About Paris, and Three Gringos in Venezuela and Central America. This book, written by the journalist's brother, provides an intimate look at a writer who led a very public life.

The Second Edition of this classic text maintains the clear exposition, logical organization, and accessible breadth of coverage that have been its hallmarks. It plunges directly into algebraic structures and incorporates an unusually large number of examples to clarify abstract concepts as they arise. Proofs of theorems do more than just prove the stated results; Saracino examines them so readers gain a better impression of where the proofs come from and why they proceed as they do. Most of the exercises range from easy to moderately difficult and ask for understanding of ideas rather than flashes of insight. The new edition introduces five new sections on field extensions and Galois theory, increasing its versatility by making it appropriate for a two-semester as well as a one-semester course.
