In its first centennial, aerospace has matured from a pioneering activity to an indispensable enabler of our daily life activities. In the next twenty to thirty years, aerospace will face a tremendous challenge - the development of flying objects that do not depend on fossil fuels. The twenty-three chapters in this book capture some of the new technologies and methods that are currently being developed to enable sustainable air transport and space flight. It clearly illustrates the multi-disciplinary character of aerospace engineering, and the fact that the challenges of air transportation and space missions continue to call for the most innovative solutions and daring concepts.

This book presents a broad overview of computer graphics (CG), its history, and the hardware tools it employs. Covering a substantial number of concepts and algorithms, the text describes the techniques, approaches, and algorithms at the core of this field. Emphasis is placed on practical design and implementation, highlighting how graphics software works, and explaining how current CG can generate and display realistic-looking objects. The mathematics is non-rigorous, with the necessary mathematical background introduced in the Appendixes. Features: includes numerous figures, examples and solved exercises; discusses the key 2D and 3D transformations, and the main types of projections; presents an extensive selection of methods, algorithms, and techniques; examines advanced techniques in CG, including the nature and properties of light and color, graphics standards and file formats, and fractals; explores the principles of image compression; describes the important input/output graphics devices.

This CRJ 700 Aircraft Systems Study Guide will help you walk into your oral exam with confidence. This study guide covers all of the CRJ 700 systems in an efficient question/answer format. Reading and reviewing systems information in a manual doesn't necessarily challenge a pilot's knowledge of the aircraft. Reading a question and trying to answer it from memory is much more challenging and provides positive feedback. STOP going through your systems manual trying to figure out what you know and what you don't know. After going through this study guide a few times, you will easily organize what you know and what you don't know on the CRJ 700. This kind of organization will make it much easier and faster to study for your next CRJ checkride. Need a better way to study for a CRJ training event? Try the Aviation Study Made Easy System. Over 1,200 questions with answers The average time to go through a system chapter in our book, after organizing the information, is 15 minutes Easy to quiz yourself 100% of your study time will be spent on information you don't know Easily organize all of the systems information for future training events Build your confidence Whether you are studying for an initial training event or recurrent training,
