

Budgeting And Budgetary Institutions Public Sector Governance And Accountability

Given that public budgeting is a political process in which public officials make value choices for society, understanding public budgeting is understanding power. *Public Budgeting: Politics, Institutions, and Processes* acknowledges the political power of budgeting, examines its concepts and mechanics, and assesses the political implications of its supposedly apolitical, scientific techniques. A clear, concise policy overview of what budgets mean and how they are used, *Public Budgeting* discusses both economic theory and the practice of budget politics. It is the only text offering extensive coverage of public budget creation while placing the budgeting process within its political context. Its logical organization and broad yet accessible coverage introduce students of public budgeting and public administration to all key aspects of budgeting while stressing capital budgeting and budgeting techniques.

Securing Development: Public Finance and the Security Sector highlights the role of public finance in the delivery of security and criminal justice services. This book offers a framework for analyzing public financial management, financial transparency, and oversight, as well as expenditure policy issues that determine how to most appropriately manage security and justice services. The interplay among security, justice, and public finance is still a relatively unexplored area of development. Such a perspective can help security actors provide more professional, effective, and efficient security and justice services for citizens, while also strengthening systems for accountability. The book is the result of a project undertaken jointly by staff from the World Bank and the United Nations, integrating the disciplines where each institution holds a comparative advantage and a core mandate. The primary audience includes government officials bearing both security and financial responsibilities, staff of international organizations working on public expenditure management and security sector issues, academics, and development practitioners working in an advisory capacity.

By discussing the available theoretical and empirical literature, this paper argues that budget procedures and budget institutions do influence budget outcomes. Budget institutions include both procedural rules and balanced budget laws. We critically assess theoretical contributions in this area and suggest several open and unresolved issues. We also examine the empirical evidence drawn from studies on samples of OECD countries, Latin American countries and the United States. We conclude with a discussion of the normative implications of this literature and with some concrete proposals.

In this timely contribution, Geneviève Tellier imparts a sense of transparency to the public purse, providing a comprehensive account of the budget process of the federal and provincial and territorial governments.

Transparent and prudent local financial management has come to be recognized as critical to the integrity of local public sector and to gaining and retaining trust of local residents. Such integrity and trust is sometimes lacking in some local governments in developing countries, especially in the Africa region. This volume attempts to provide practical guidance to local governments interested in establishing sound financial management systems. Leading international experts have contributed to all relevant aspects of local public financial management - cash management, internal controls, accounts, audits, and debt management.

This book provides a comparative look at financial management systems from a family of systems point of view.

This technical note and manual (TNM) addresses the following main issues:

- Discusses the purpose of a chart of accounts and its importance in public financial management
- Discusses stakeholder needs in a typical public financial management framework that need to be reflected in a chart of accounts
- Discusses the role of chart of accounts in budgetary and financial accounting
- Discusses the relation between the chart of accounts and IFMIS
- Explains key steps for identifying data requirements and structures for developing a chart of accounts

This paper presents, for the first time, multi-dimensional indices of the quality of budget institutions in low-income countries. The indices allow for benchmarking against the performance of middle-income countries, across regions, and according to different institutional arrangements that deliver good fiscal performance. Using the constructed indices, the paper provides preliminary empirical support for the hypotheses that strong budget institutions help improve fiscal balances and public external debt outcomes; and countries with stronger fiscal institutions have better scope to conduct countercyclical policies.

Public Budgeting Systems, Tenth Edition is the most comprehensive and balanced treatment of the current state of budgeting throughout all levels of the United States government. Current and prospective public managers, accordingly, often succeed or fail in their careers based in large part on whether they are intelligent consumers of financial data and have an adequate understanding of the budget process. By providing a detailed overview of all budgeting and financial management, the book enables students to gain an appropriate understanding of a complex topic.

Toward Next-Generation Performance Budgeting: Lessons from the Experiences of Seven Reforming Countries analyzes the difficulties that national governments have had in linking measurement of performance and results to the annual budget process. The book is based on intensive reviews of four advanced countries that were early reformers and three pioneers in Central and Eastern Europe. In addition to looking at their current systems, *Toward Next-Generation Performance Budgeting* looks at how their approaches have evolved over time. This book attempts to fill a gap between survey-based self-assessments and best-practice guides. It was compiled in response to the concerns of budget departments in countries in Eastern Europe and Central Asia, many of which are committed to adopting some form of performance-based budgeting and are seeking to learn

from the experiences of previous reformers what the practical challenges are and how they can adapt best-practice approaches to a messy reality. The case studies demonstrate a general pattern of disappointment with the results of performance budgeting, balanced by a strong belief in the underlying logic, which has resulted in repeated efforts to modify approaches to tighten the links between budgeting and performance. These efforts have resulted in significant variation in how countries have implemented performance budgeting and in the benefits they have derived. These variations offer guidance for models of next-generation performance budgeting, avoiding classic pitfalls, and incorporating modifications introduced by those who have used it longest and found it useful.

This book is the first comprehensive, full-scale treatment of the law, politics and economics with regard to the policies and policy instruments for budget stabilization at the state level. Covering the period from 1946 through 2008 in the United States, it provides details on the methods and results of empirical tests of the effects of budget stabilization instruments on government operations, public service provision, and some other aspects of social and economic life. With the lingering effects of the most recent financial crisis and economic downturn, and the subsequent Tea Party movement advocating smaller government and deficit reduction, this book carries timely and important theoretical as well as practical implications, particularly in regard to the potential for counter-cyclical fiscal policy in mitigating negative impacts during a recession. The first contribution of the book is in public finance theory: it provides insights into the applications of the stabilization function in the context of strong government, thereby refining Keynesianism. The second aspect is in Public Choice: the creation and functioning of budget stabilization funds offer extra evidence to demonstrate that the general public provides input and voice in more than the conventional ways when it comes to policy making, even in an area dominated by strong government. The third aspect is in policy making, exploring the opportunities for refining policy tools in preparation for future downturns.

This book provides rigorous and provocative understanding of the art and practice of participatory budgeting for those interested in strengthening inclusive and accountable governance.

How can governments control spending pressure from influential groups, often representing powerful regional interests? This book is concerned with institutional solutions that allow modern nation states to balance historically grown cultural, political and economic diversity. Laura von Daniels combines different literatures in economics and political science, and draws on interviews with former government leaders, and country experts from international organizations. She applies this research to topics such as fiscal institutions and budget balances, presenting a critical review of different institutional approaches to resolving fiscal imbalances and public indebtedness. Students and scholars of various disciplines, including politics, public and social policy, economics and business will find the discussions and detailed description of institutional reforms in emerging market nations to be of use to their research. It will also be of interest to practitioners working on fiscal decentralization and budget control.

"In today's challenging economic climate, college and university administrators need reliable financial advice for helping their institutions thrive. Thoroughly revised and updated, this book is designed to help new administrators understand and become more proficient in their financial management role within the institution. Written in an accessible style, so that the book's guidance to immediate use, the book is grounded in the latest knowledge and filled with illustrative examples from across all types of institutions. This is an ideal resource for courses in graduate programs in higher education leadership and administration"--

Public Budgeting in African Nations aims to provide usable budgeting and fiscal policy management information to development practitioners interested in improving the performance of governments in the context of good governance. It shares regional and cross-cultural experiences with international audiences and gives reflective attention to comparative budgeting and fiscal policy management. With a promising economic and fiscal forecast, such information is timely for international development practitioners and for scholars and researchers interested in advancing development management. This book adopts an interdisciplinary/pragmatic approach to analyze and present research findings on public budgeting as a sustainable development tool. The central argument is that development practice will benefit from a bottom-up, decentralized approach to budgeting and fiscal policy management, involving national, sub-national, and civil society institutions. From this perspective, a balanced budget should draw from and reflect values and priorities across the full spectrum of social and political life.

Through its budgetary, managerial and regulatory review mandates, the Office of Management and Budget (OMB) in the US can function as an "enforcer" with a significant impact on public policy and its implementation. This is a study of the OMB and its significant role within the American government.

This primer succinctly summarises key theoretical concepts in fiscal choice for both practitioners and scholars. The author contends that fiscal choice is ultimately a choice of both politics and economics. The book first introduces budget institutions and processes at various levels of government, which restrict budget decision makers' discretion. It also explains budget decision makers' efforts to make rational resource allocations. It then shows how and why such efforts are stymied by the decision makers' capacity and institutional settings. The book's unique benefit is its emphasis on all the essential topics, with short, module-type chapters which can be read in any order.

The central government publishes comprehensive financial statements, which include the social security funds and balance sheets with all financial assets and liabilities. Audited financial statements are published more than nine months after the end of the fiscal year. The 2004 Fiscal Responsibility Law (LRF), introduced a number of key reforms in public financial management which apply to the central and most of the first layer of sub-national governments. The reforms include establishment of a macro-fiscal framework, fiscal rules, a medium-term budget framework (MTBF), a system of quarterly budget execution reports, and the Federal Council on Fiscal Responsibility (FCFR) which is tasked to enforce the provisions of the LRF. However, there are problems with the LRF and its implementation: (i) the out-years of the MTBF are indicative only; (ii) several LRF provisions have been suspended or relaxed since 2009; (iii) some provinces are not complying with their obligations under the law; and (iv) membership in the FCFR is not mandatory and adherence to the LRF is voluntary. The FCFR comprises of

representatives of the central government, the city of Buenos Aires, 1 and 21 of the 23 provincial governments. Nonetheless, the law has significantly increased the capacity to coordinate fiscal policies across levels of government and individual jurisdictions. Differences between macroeconomic and fiscal forecasts and outturns are not analyzed. Limited information is presented on fiscal risks. Budget execution control and reporting have been strengthened through a series of upgrades to the Integrated Financial Management Information System (SIDIF), which began operations in 1993.

The OECD Toolkit on Budget Transparency brings together standards and guidelines on budget transparency developed by a broad range of international bodies and networks. Chapter 1 introduces the various institutions, official instruments and guidance materials available, including standards issued by international organisations. Chapter 2 provides an alternative way of navigating these materials, based around five main institutional or sectoral areas. The Toolkit also provides guidance on how best to use this information to achieve more open, transparent, inclusive and accountable budget processes.

Performance based oversight and accountability can serve as an important antidote to government corruption, inefficiency, and waste. This volume provides an analytical framework and operational approaches needed for the implementation of results-based accountability. The volume makes a major contribution to the literature on public management and evaluation. Major subject areas covered in this book include: performance based accountability, e-government, network solutions to performance measurement and improvement; institutions of accountability in governance; legal and institutional framework to hold government to account; fighting corruption; external accountability; ensuring integrity of revenue administration; the role of supreme audit institutions on detecting fraud and corruption; and the role of parliamentary budget offices and public accounts committees.

Managing Public Expenditure presents a comprehensive and in-depth analysis of all aspects of public expenditure management from the preparation of the budget to the execution, control and audit stages.

This book is designed to help college/university faculty and academic administrators become more constructive and knowledgeable participants in the budgetary process. Chapter 1 introduces budgets and the budgetary process, with an explanation of the importance of budgeting in policy making, Chapter 2 discusses economic and political contexts of budgeting and describes the framework for the budgetary process both on and off campus. It addresses the importance of enrollments as a major factor in resource issues, sources of funds, how state and local governments differ with respect to wealth and willingness to tax wealth, and other issues. Chapter 3 identifies factors that distinguish the budgetary process of one institution from that of another, focusing on capital budgets and operating budgets, budget cycles, participants in budgeting, and chronology of budgetary processes. Chapter 4 describes how participants influence the operating and capital budgetary processes. It discusses the need for flexibility, the relationship between risk and budgets, and how changes in institutional character can influence the budgetary process. Chapter 5 discusses budgetary planning for reallocation and retrenchment, emphasizing that the least disruptive strategies are those that are implemented in anticipation of fiscal stringency rather than in the midst of a financial crisis. An appendix describes several approaches to budgeting, such as zero base budgeting and performance budgeting. (Each chapter contains references.) (JDD)

By discussing the available theoretical and empirical literature, this paper argues that budget procedures and budget institutions do influence budget outcomes. Budget institutions include both procedural rules and balanced budget laws. We critically assess theoretical contributions in this area and suggest several open and unresolved issues. We also examine the empirical evidence drawn from studies on samples of OECD countries, Latin American countries and US states.

Traditionally, economics training in public finances has focused more on tax than public expenditure issues, and within expenditure, more on policy considerations than the more mundane matters of public expenditure management. For many years, the IMF's Public Expenditure Management Division has answered specific questions raised by fiscal economists on such missions. Based on this experience, these guidelines arose from the need to provide a general overview of the principles and practices observed in three key aspects of public expenditure management: budget preparation, budget execution, and cash planning. For each aspect of public expenditure management, the guidelines identify separately the differing practices in four groups of countries - the francophone systems, the Commonwealth systems, Latin America, and those in the transition economies. Edited by Barry H. Potter and Jack Diamond, this publication is intended for a general fiscal, or a general budget, advisor interested in the macroeconomic dimension of public expenditure management.

Printed on Demand. Limited stock is held for this title. If you would like to order 30 copies or more please contact books@worldbank.org Contact books@worldbank.org, if currently unavailable. Public expenditure issues are encountered wherever there is a discussion of government, the public sector, and development. Over the years, the World Bank has invested considerable resources in analyzing public expenditures and the impacts of different interventions on sustainable development. This handbook provides a broad framework for thinking about public expenditure management and how it affects budgetary outcomes. It highlights the fact that good analysis and sound policy are not enough to ensure sound and sustainable development outcomes. Of particular interest is the concept of three levels of budgetary outcomes - aggregate fiscal discipline, strategic prioritization, and operational performance.

Public budgeting structure, process, legal framework and policy with examples from industrialized and developing countries Public Budgeting in Context examines budgeting at all levels of U.S. government—federal, state, and local—and in a sample of governments around the world. The book assesses the context of public budgeting in these governments, especially the legal foundations for its practice and how the process and final budgets are impacted by governance structures, laws, various budget actors and different branches of government. The author presents focused attention on the influences on government budgets of the executive, legislative and judicial branches of government, the bureaucracy, the public and the media. In light of worldwide fiscal malaise, especially during and since the Great Recession, this book illustrates the heightened complexity of the budgeting environment that pervades all governments today—industrialized or developing, large or small. For those who like to dive into the details, the book presents numerous examples of public budgeting as practiced and points to the wealth of data available for analyses of the budgetary context and process, budget shares and results regarding virtually any government of interest. Chapters cover the constitutional and statutory provisions for budgeting in selected governments. Budget and policy agenda setting and executive leadership, legislative budget powers and the influence of the judiciary on modern government budgets are exposed. Budget execution requirements of the bureaucracy, the input of customers, clients and citizens to government budgets, and media influences on public budgets and agencies are highlighted. Budget mechanics—budget types, formats, timelines and reforms—are introduced and compared. Taxes and intergovernmental revenues are considered, with predominant tax choices at every level of government in the United States and those in a select, developing country represented. The book introduces an emerging method for investigating the outcomes of government spending—human rights budget analysis—and includes as an example the assessment of budget reform and results of public health spending in one selected government. Highlights of Public Budgeting in Context Offers a comprehensive text for understanding public budgeting in governments of a variety of contexts and capacities and across different

levels Written by a noted expert in the field of public budgeting and financial management Contains illustrative examples from industrialized and developing countries Guides to innumerable datasets with information about governments and their budgets Includes a companion website filled with templates for budget and fiscal analysis Unravel the complex issues of modern public budgeting using this unique presentation of its practice in a variety of governments in the U.S. and a select sample from around the world.

This book is a comprehensive, scholarly account of Hong Kong Public Budgeting, spanning from the pre-1997 British rule to the post-1997 Chinese rule. Transcending the existing comparative budgeting studies which are either central-government focused or symmetric local-government focused, this book presents Hong Kong Public Budgeting as a distinctive case of territorial autonomy. It offers historical and comparative analyses of Hong Kong Public Budgeting, tracing the evolution of budgetary institutions and budgetary decision-making and examining the critical issues of budget openness, budget oversight, and budget allocation. This book will be of key interest to scholars and students of comparative budgeting studies. It will also be an excellent text for public budgeting instructors and students in East Asia and Hong Kong.

This OECD report examines how reallocation is impacted by four institutions of the budget process: medium-term expenditure frameworks, rules of budgetary discipline, the role of the Minister of Finance, programme review.

Budgeting and Budgetary Institutions World Bank Publications

This book describes the institutions and process through which the Georgia General Assembly adopts a budget, the executive-legislative branch politics that transpire during the process and the tax and spending policies that the process produces. It argues that the state budget is developed by fiscal conservatives within a culture of fiscal conservatism that is conducive to low taxes and low spending. It identifies the patterns and trends of taxing and spending over several decades and during the administrations of nine governors. Its chapter on the line-item veto illustrates the nature of executive-legislative budget relationships in the state. It concludes with an examination of the important milestones in the evolution of Georgia budgeting and a comparison of Georgia with other states on several dimensions. The book offers insights and assessments that will be of interest to budgeting scholars, students of state government, and citizens who want to know more about how government taxing and spending decisions are made. .

Budgeting and budgetary institutions play a critical role in resource allocation, government accountability, and improved fiscal and social outcomes. This volume distills lessons from practices in designing better fiscal institutions, citizen friendly budgets, and open and transparent processes of budget preparation and execution. It also highlights newer concepts of performance budgeting, accrual accounting, activity based costing, and the use of information and communication technology in budgeting. These tools of analysis are supplemented by a review of budgeting in post-conflict countries and two country case studies on the reform of budgeting systems.

This paper defines and explains key stages of the government expenditure chain and describes the controls applied at each stage, including their objectives and key features as well as centralized vs. decentralized approaches in application of those controls. The paper also examines the influence of different administrative traditions on types of expenditure controls, including the authority and responsibility of various institutional actors. Finally, it discusses typical weaknesses/problems associated with different traditions of expenditure control and suggests specific measures for strengthening the control framework. While providing examples of expenditure control practices from more than 32 countries, the paper points out that more than two-thirds of the 85 low and middle income countries covered by the publicly available Public Expenditure and Financial Accountability (PEFA) assessments have weak systems of expenditure control that are also associated with higher levels of expenditure arrears and a lack of budget credibility. This paper will help public financial management practitioners to evaluate budget execution systems and identify priorities for strengthening expenditure controls. It will also usefully guide technical assistance work related to modernization of government budget execution and expenditure control systems, including the design and implementation of IT-based financial management information systems.

This paper assesses the relative strengths and weaknesses of fiscal institutions in ten Southeastern European countries, using recent benchmarking methodologies developed by FAD. The assessment evaluates each country's understanding of the scale of the fiscal adjustment challenge, its ability to develop a credible consolidation strategy, and its capacity to implement the strategy. Key institutional arrangements, are generally in place, including top-down budgeting and medium-term budget frameworks. Other institutional arrangements require further attention, including macro-fiscal forecasting, fiscal risk analysis, setting fiscal objectives, presence and role of independent fiscal agencies, and top-down parliamentary approval.

The unprecedented rise and persistence of large-scale budget deficits in many developed and developing nations during the past three decades has caused great concern. The widespread presence of such deficits has proved difficult to explain. Their emergence in otherwise diverse nations defies particularistic explanations aimed at internal economic developments within a specific country. *Fiscal Institutions and Fiscal Performance* shifts emphasis away from narrow economic factors to more broadly defined political and institutional factors that affect government policy and national debt. This collection brings together new theoretical models, empirical evidence, and a series of in-depth case studies to analyze the effect of political institutions, fiscal regulations, and policy decisions on accumulating deficits. It provides a fascinating overview of the political and economic issues involved and highlights the role of budgetary institutions in the formation of budget deficits.

This *Public Expenditure and Institutional Review* presents the findings of an analysis of the budget, and institutions of public expenditure management, and accountability, fundamental to policy decisions, and economic management. It builds on extensive analysis undertaken by the Special Ad Hoc Committee on Fiscal Transparency, and Public Finance, and, the review suggests that the current economic crisis is deep-rooted in the institutions of collective decision making in government, confirming that unless

fundamental improvements are made to the processes for formulating public policy, allocating resources, and implementing budgets, any economic recovery will almost certainly be fragile, and short-lived. Thus, from the perspectives of system performance, and structural and institutional aspects, an improved budgetary system should enable the government to achieve aggregate fiscal magnitudes, based on expenditures, sustained by tax, and non-tax resources; the budget should generate the adequate information to ensure funding of key policy objectives; and, public accountability should generate incentives to support performance objectives. The report identifies aggregate fiscal management as a major weakness, compromised by the significant growth of off-budget activity, while the weakness of the budget system in terms of ability to support decision-making, is equally pernicious. A series of actions to restore fiscal discipline are outlined for the short-term (2001), and initiatives for a multi-year budget commencing in 2002 are included. Recommendations include strengthening the aggregate fiscal program management capacity; reviving policy formulation capacity, and institutional framework to define budgetary policy; and, initiating budget control devolution, introducing a budget performance approach.
