High-performance Construction Materials: Science And Applications Caijun Shi, Yi-lung Mo, 2008-06-11 This book describes a number of high-performance construction materials, including concrete, steel, fiber-reinforced cement, fiber-reinforced plastics, polymeric materials, geosynthetics, masonry materials and coatings. It discusses the scientific bases for the manufacture and use of these high-performance materials. Testing and application examples are also included, in particular the application of relatively new high-performance construction materials to design practice. Most books dealing with construction materials typically address traditional materials only rather than high-performance materials and, as a consequence, do not satisfy the increasing demands of today's society. On the other hand, books dealing with materials

science are not engineering-oriented, with limited coverage of the application to engineering practice. This book is thus unique in reflecting the great advances made on high-performance construction materials in recent years. This book is appropriate for use as a textbook for courses in engineering materials, structural materials and civil engineering materials at the senior undergraduate and graduate levels. It is also suitable for use by practice engineers, including construction, materials, mechanical and civil engineers.

*Fundamentals of Building Construction* Edward Allen, 1990 An introduction to the art of building, it has been revised and updated to reflect changes in the industry. Describes the materials used since ancient times—wood, stone, brick and the techniques by which they are made into buildings today—before proceeding to structural steel, reinforced and prestressed concrete, float glass, extruded aluminum, advanced gypsum products, synthetic rubber compounds and plastics. Deals with whole systems of building including foundations, framing, roofing, interiors, electrical and mechanical systems. Each chapter contains a summary, list of key terms and concepts, review questions and references. Illustrated with over 300 line drawings and 700 photographs.

**Performance of Bio-based Building Materials** Dennis Jones, Christian Brischke, 2017-07-07 Performance of Bio-based Building Materials provides guidance on the use of bio-based building materials (BBBM) with respect to their performance. The book focuses on BBBM currently present on the European market. The state-of-the-art is presented regarding material properties, recommended uses, performance expectancies, testing methodology, and related standards. Chapters cover both 'old and traditional' BBBM since quite a few of them are experiencing a comeback on the market. Promising developments that could become commercial in the near future are presented as well. The book will be a valuable reference resource for those working in the bio-based materials research community, architects and agencies dealing with sustainable construction, and graduate students in civil engineering. - Takes a unique approach to bio-based materials and presents a broad overview of the topics on relevant areas necessary for application and promotion in construction - Contains a general description, notable properties related to performance, and applications - Presents standards that are structured according to performance types

**Principles and Practices of Commercial Construction** Cameron K. Andres, Ronald C. Smith, 2009 The revision of this classic text provides a well-illustrated and logical engineering approach to the principles and practices of commercial construction. Principles and Practices presents an overview of the methods, equipment, and materials used while covering each phase of the construction process in a sequential, chapter-by-chapter format.--Publisher.

The principles and processes of construction are explained with the concepts of design included

where appropriate. Extensive coverage of building construction practice, techniques and regulations representing both traditional procedures and modern developments are included to provide the most comprehensive and easy to understand guide to building construction. This new edition has been updated to reflect recent changes to the building regulations, as well as new material on modern methods of construction, greater emphasis on sustainability and a new look interior. Chudley and Greeno's Building Construction Handbook is the essential, easy-to-use resource for undergraduate and vocational students on a wide range of courses including NVQ and BTEC National, through to Higher National Certificate and Diploma, to Foundation and three-year Degree level. It is also a useful practical reference for building designers, contractors and others engaged in the construction industry.

**Sustainability of Construction Materials** Jamal Khatib, 2009-04-29 Until recently, much of the development of building materials has predominantly focused on producing cheaper, stronger and more durable construction materials. More recently attention has been given to the environmental issues in manufacturing, using, disposing and recycling of construction materials. Sustainability of construction materials brings together a wealth of recent research on the subject. The first part of the book gives a comprehensive and detailed analysis of the sustainability of the following building materials: aggregates; timber, wood and bamboo; vegetable fibres; masonry; cement, concrete and cement replacement materials; metals and alloys; glass; and engineered wood products. A final group of chapters cover the use of waste tyre rubber in civil engineering works, the durability of sustainable construction materials and nanotechnologies for sustainable construction. With its distinguished editor and international team of contributors, Sustainability of construction materials is a standard reference for anyone involved in the construction and civil engineering industries with an interest in the highly important topic of sustainability. - Provides a comprehensive and detailed analysis of the sustainability of a variety of construction materials ranging from wood and bamboo to cement and concrete - Assesses the durability of sustainable construction materials including the utilisation of waste tyre rubber and vegetable fibres - Collates a wealth of recent research including relevant case studies as well as an investigation into future trends

Chapters provide an overview of LCA and how it can be used in conjunction with other indicators to manage construction. Topics covered include indoor environment quality, energy efficiency, transport, water reuse, materials, land use and ecology, and more. The book presents a valuable tool for construction professionals and researchers that want to apply sustainable construction techniques to their projects. Practitioners will find the international case studies and discussions of worldwide regulation and standards particularly useful. - Provides a framework for analyzing sustainable construction technologies and economic viability - Introduces key credit criteria for different sustainable

construction technologies - Covers the most relevant construction areas - Includes technologies that can be employed during the process of construction, or to the product of the construction process, i.e. buildings - Analyzes international rating systems and provides supporting case studies

**Principles of Construction** Roger Greeno, 2014-07-22 Principles of Construction is an illustrated guide to the processes involved in a building programme, from inception stage through to completion. This second edition has been updated in accordance with current Building Regulation, with the emphasis remaining on safety and the correct use of materials. Following a logical procession of concepts and practice, the book includes details of the various aspects of elementary construction and offers an insight into the techniques applied in larger scale projects using standard steel sections and reinforced concrete. Other procedures covered include undertaking a structural survey, recognising structural defects and carrying out remedial treatment.

*Principles and Practices of Light Construction* Ronald C. Smith, 1970
