This unique book reveals the procedural aspects of knowledge-based urban planning, development and assessment. Concentrating on major knowledge city building processes, and providing state-of-the-art experiences and perspectives, this important compendium explores innovative models, approaches and lessons learnt from a number of key case studies across the world. Many cities worldwide, in order to brand themselves as knowledge cities, have undergone major transformations in the 21st century. This book provides a thorough understanding of these transformations and the key issues in building prosperous knowledge cities by focusing particularly on the policy-making, planning process and performance assessment aspects. The contributors reveal theoretical and conceptual foundations of knowledge cities and their development approach of knowledge-based urban development. They present best-practice examples from a number of key case studies across the globe. This important book provides readers with a thorough understanding of the key issues in planning and developing prosperous knowledge cities of the knowledge economy era, which will prove invaluable to national, state/regional and city governments' planning and development departments. Academics, postgraduate and undergraduate students of regional and urban studies will also find this path-breaking book an intriguing read.

This book presents a significant advancement in the theory and practice of knowledge engineering, the discipline concerned with the development of intelligent agents that use

knowledge and reasoning to perform problem solving and decision-making tasks. It covers the main stages in the development of a knowledge-based agent: understanding the application domain, modeling problem solving in that domain, developing the ontology, learning the reasoning rules, and testing the agent. The book focuses on a special class of agents: cognitive assistants for evidence-based reasoning that learn complex problem-solving expertise directly from human experts, support experts, and nonexperts in problem solving and decision making, and teach their problem-solving expertise to students. A powerful learning agent shell, Disciple-EBR, is included with the book, enabling students, practitioners, and researchers to develop cognitive assistants rapidly in a wide variety of domains that require evidence-based reasoning, including intelligence analysis, cybersecurity, law, forensics, medicine, and education. The research is clear: the ability to read for understanding requires a great deal of knowledge and vocabulary, as well as reading skills. By linking early literacy to content area learning, we can provide children with the purposeful, knowledge-building experiences they need to be successful readers and writers. In this comprehensive and practical resource, early literacy experts Susan Neuman and Kathy Roskos give you the tools to do this. They share five essential early literacy practices—creating a supportive learning environment; shared book reading; songs, rhymes, and word play; developmental writing; and play—and show how and why to apply these in math, science, social studies, and art so children acquire the knowledge and the skills they need for academic success. For use with Grades PreK–K.

"Sharing knowledge is power." If ever there were a field to which this applies, it is the knowledge management industry. And in today's highly-competitive, fast-paced business world, corporations, businesses and organizations in both the public

and private sectors are constantly searching for new cutting-edge methods and techniques for creating, storing, capturing, managing, organizing, distributing, combining, and retrieving knowledge. But the task of accomplishing such functions is not as simple as it sounds. Jay Liebowitz's *Building Organizational Intelligence: A Knowledge Management Primer* gives executives, managers, systems analysts, and other knowledge-management professionals the competitive edge they need in achieving that task. In a concise and easy-to-read format, the book describes the concepts, techniques, methodologies, and tools associated with those functions, and includes mini-case studies and vignettes of how industry is developing and applying these functions towards building organizational intelligence. What's more, the book is packaged with a limited functionality version of "WisdomBuilder," the first in a family of knowledge-management tools that provide a fully integrated solution to the information management and analysis dilemma. Able to run under Windows 95, 98 and NT, "WisdomBuilder" solves the information overload problem by reducing the time and cost of extracting information and other research knowledge from disorganized repositories of heterogeneous data. The book, *Building and Redirecting Your Focus*, is written to help people structure their lives the right way. It identifies focus as a major key to purpose discovery, purpose survival and accomplishments. The book underscores the importance of having a clear mental sight to make positive decisions for maximum impact. It also identifies the acquisition of quality as transformation into transformation and accomplishment. In addition, it considers handling one's perception and understanding efforts and results as critical components in focus building. Finally, the book examines the relevance of self coordination to achieve the highest possible impact and fulfillment in life.

Exploring Options is designed to help student writers develop their knowledge and use of academic language to meet the demands of college- and university-level writing assignments. It draws on the research identifying lexical and grammatical patterns across academic contexts and provides authentic reading contexts for structured vocabulary learning. Recognizing that vocabulary choices in writing often require consideration of grammatical structure, Exploring Options focuses on specific kinds of lexico-grammatical decisions--that is, the ones involving the interaction between vocabulary and grammar--that students face in shaping, connecting, and restructuring their ideas. The book helps writers learn how to effectively use resources such as learner

dictionaries, thesauruses, and concordancers to improve academic word knowledge. Following a unit on using resources for vocabulary development, the contents are divided into three parts: Showing Relationships within Sentences, Connecting and Focusing across Sentences, and Qualifying Statements and Reporting Research. Part 1 focuses on verbs and modifiers that express increases and decreases, verbs and abstract nouns that describe change, connectors and verbs describing causal relationships, and parallel structures. Part 2 explores the words that help connect ideas and add cohesion. Part 3 discusses how to express degrees of certainty and accuracy and the use of reporting verbs.

presents a principled framework centered on mapping patterns to connect relational databases with knowledge graphs, the roles within an organization responsible for the knowledge graph, and the process that combines data and people. The content of this book is applicable to knowledge graphs being built either with property graph or RDF graph technologies. Knowledge graphs are fulfilling the vision of creating intelligent systems that integrate knowledge and data at large scale. Tech giants have adopted knowledge graphs for the foundation of next-generation enterprise data and metadata management, search, recommendation, analytics, intelligent agents, and more. We are now observing an increasing number of enterprises that seek to adopt knowledge graphs to develop a competitive edge. In order for enterprises to design and build knowledge graphs, they need to understand the critical data stored in relational databases. How can enterprises successfully adopt knowledge graphs to integrate data and knowledge, without boiling the ocean? This book provides the answers.

This book by Judith Langer—internationally known scholar in literacy learning—examines how people gain knowledge and become academically literate in the core subjects of English, mathematics, science, and social studies/history. Based on extensive research, it offers a new framework for conceptualizing knowledge development (rather than information collection), and explores how one becomes literate in ways that mark "knowing" in a field. Langer identifies key principles for practice and demonstrates how the framework and the

A focal point of early childhood education is how young children build knowledge and the ways that practitioners, parents and carers can help them to do so. Many adults find it challenging to identify what knowledge young children are building and how they do so, making it difficult to support young children's learning and development in the most effective ways. This essential

guide will help you to identify and develop young children's knowledge and understanding in early years settings, not only in terms of statutory requirements but far beyond them. Building Knowledge in Early Childhood Education draws on empirical research findings from the Young Children As Researchers (YCAR) project to examine everyday activities and reveal the means that young children use to build knowledge and understanding, as well as exploring the similarities between learning behaviours in early childhood and adult life. Interweaving everyday activities in practice with research and theory, this book covers: how young children construct knowledge; learning, problem-solving and exploring; concepts and conceptualising in early childhood; evidence-based decision-making; how young children behave as researchers. Offering practical advice and suggestions to create opportunities that identify and facilitate young children's own constructions of knowledge and understanding, this book is essential reading for practitioners, students and all those interested in the theories surrounding young children as researchers.

This is the first book to focus on the people side of knowledge management--what it takes to get employees to contribute to a knowledge system. Robert Buckman explains how to orchestrate this culture change, drawing from the lessons learned by Buckman Laboratories--the leader and pioneer in knowledge management--in implementing award-winning knowledge systems. His book is a practical primer on how organizations can move from "hoarding" knowledge to "sharing" it, building a global strategy that allows them to respond faster than the competition to any customer's need on a global basis. Buckman reveals how to:

- Combat the biggest problem with implementing knowledge management--creating the culture that supports it
- Increase the speed of innovation globally across an organization
- Resolve technical problems quickly
- Make immediate, informed decisions to help solve customer issues
- Create new products based on customer input and demand

The domain of eHealth faces ongoing challenges to deliver 21st century healthcare. Digitalization, capacity building and user engagement with truly interdisciplinary and cross-domain collaboration are just a few of the areas which must be addressed. networking between an international audience of academics, health professionals, patients and industry partners. The title of this year's conference is: Building Continents of Knowledge in Oceans of Data – The Future of Co-Created eHealth, and contributions cover a broad range of topics related to the digitalization of healthcare, citizen participation, data science, and changing health systems, addressed from the perspectives of citizens, patients and their families, healthcare professionals, service providers, developers and policy makers. The second part of the title in particular has attracted a large number of papers describing strategies to create, evaluate, adjust or deliver tools and services for improvements in healthcare organizations or to enable citizens to respond to the challenges of dealing with health systems. Papers are grouped under the headings: standards and interoperability, implementation and evaluation, knowledge management, decision support, modeling and analytics, health informatics education and learning systems, and patient-centered services. Attention is also given to development for sustainable use, educational strategies and workforce development, and the book will be of interest to both developers and practitioners of healthcare services.

"Foqué establishes a general design theory based on the axioms of pragmatic thinking, a crucial unity between experience and the process of learning, and between conceptual thought and situational consciousness. Building Knowledge develops a theoretical framework and practical instrumentation to establish a knowledge base for the discipline of architecture. Part one of the book presents design methods as a third way of investigating reality apart from scientific methods or the conception of art. By describing

thescience-philosophical context, Foqué extensively analyses the nature of design activity and the design process, its inherent characteristics, and the differences between science and art. As such, it is argued that design processes have a research dimension an sich, which are essentially contextual and action driven. Foqué offers an integrated and comprehensive perspective to understand design activity both from an epistemological and practical standpoint. This results in an expanded discourse about the true nature of architectural design processes. Within this theoretical framework, part two explains how case study research is a primordial means to establish a knowledge base for the discipline and profession of architecture. From this premise, Foqué compares case study research in law, medicine and business administration and develops a practical and comprehensive approach to case studies in architecture. The methodology offers a solid and general framework wherein a consistent body of knowledge regarding architectural design processes can be generated. This promotes deeper insight in the complex relationship between context, product and process, which governs every design process on the one hand, and between the several stakeholders involved on the other hand."--Publisher.

The wholesale capture and distribution of knowledge over the last thirty years has created an unprecedented need for organizations to manage their knowledge assets. Knowledge Management (KM) addresses this need by helping an organization to leverage its information resources and knowledge assets by "remembering" and applying its experience. KM involves the acquisition, storage, retrieval, application, generation, and review of the knowledge assets of an organization in a controlled way. Today, organizations are applying KM throughout their systems, from information management to marketing to human resources. Applying

Knowledge Management: Techniques for Building Corporate Memories examines why case-based reasoning (CBR) is so well suited for KM. CBR can be used to adapt solutions originally designed to solve problems in the past, to address new problems faced by the organization. This book clearly demonstrates how CBR can be successfully applied to KM problems by presenting several in-depth case-studies. Ian Watson, a well-known researcher in case-based reasoning and author of the introductory book, Applying CBR: Techniques for Enterprise Systems has written this book specifically for IT managers and knowledge management system developers. \* Provides 7 real-world applications of knowledge management systems that use case-based reasoning techniques. \* Presents the technical information needed to implement a knowledge management system. \* Offers insights into the development of commercial KM CBR applications \* Includes information on CBR software vendors, CBR consultants and value added resellers

From pressures to become economically efficient to calls to act as an agent of progressive social change, higher education is facing a series of challenges. There is an urgent need for a rigorous and sophisticated research base to support the informed development of practices. Yet studies of educational practices in higher education remain theoretically underdeveloped and segmented by discipline and country. *Building Knowledge in Higher Education* illustrates how Legitimation Code Theory is bringing research together from across the disciplinary map and enabling practical change in a rigorously theorized way. The volume addresses both students and educators. Part I explores ways of supporting student achievement from STEM to the arts, from introductory courses to doctoral training, and from using new digital media to reflective writing. Part II focuses on academic staff development in higher education, reaching from curriculum design to pedagogic practices. All chapters focus on issues of contemporary relevance to higher education, showing how Legitimation Code Theory enables these issues to be understood and practices improved. *Building Knowledge in Higher Education* brings together internationally renowned scholars in higher education studies, academic development, academic literacies, and sociology, with some of the brightest new researchers. The volume significantly extends understandings of teaching and learning in changing higher education contexts and so contributes to educational research and practice. It will be essential reading not only to scholars and students in these fields but also to scholars and
