The author offers leaders practical tools and strategies to create legally based and ethically sound approaches to dealing with and preventing bullying in schools.

Bullying has long been tolerated as a rite of passage among children and adolescents. There is an implication that individuals who are bullied must have "asked for" this type of treatment, or deserved it. Sometimes, even the child who is bullied begins to internalize this idea. For many years, there has been a general acceptance and collective shrug when it comes to a child or adolescent with greater social capital or power pushing around a child perceived as subordinate. But bullying is not developmentally appropriate; it should not be considered a normal part of the typical social grouping that occurs throughout a child's life. Although bullying behavior endures through generations, the milieu is changing. Historically, bullying has occurred at school, the physical setting in which most of childhood is centered and the primary source for peer group formation. In recent years, however, the physical setting is not the only place

bullying is occurring. Technology allows for an entirely new type of digital electronic aggression, cyberbullying, which takes place through chat rooms, instant messaging, social media, and other forms of digital electronic communication. Composition of peer groups, shifting demographics, changing societal norms, and modern technology are contextual factors that must be considered to understand and effectively react to bullying in the United States. Youth are embedded in multiple contexts and each of these contexts interacts with individual characteristics of youth in ways that either exacerbate or attenuate the association between these individual characteristics and bullying perpetration or victimization. Recognizing that bullying behavior is a major public health problem that demands the concerted and coordinated time and attention of parents, educators and school administrators, health care providers, policy makers, families, and others concerned with the care of children, this report evaluates the state of the science on biological and psychosocial consequences of peer victimization and the risk and protective factors that either increase or decrease peer victimization behavior and consequences. This book brings together an international group of experts to present the latest psychosocial and developmental criminological research on cyberbullying, cybervictimization and intervention. This book examines research and relevant theory on the role of mobile phones in the lives of children and young people, how these technologies are used for different applications, the effects that mobile phones have on young people, and the challenges of regulating and controlling the technology and its use.

The main objective of this Research Topic is to determine the conditions that place students at risk of school failure, identifying student and context variables. In spite of the fact that there is currently little doubt about how one learns and how to teach, in some countries of the “developed world,” there is still there is a high rate of school failure. Although the term “school failure” is a very complex construct, insofar as its causes, consequences, and development, from the field of educational psychology, the construct “student engagement” has recently gained special interest in an attempt to deal with the serious problem of school failure. School engagement builds on the anatomy of the students’ involvement in school and describes their feelings, behaviors, and thoughts about their school experiences. So, engagement is an important component of students’ school experience, with a close relationship to achievement and school failure. Children who self-set academic goals, attend school regularly and on time, behave well in class, complete their homework, and study at home are likely to interact

adequately with the school social and physical environments and perform well in school. In contrast, children who miss school are more likely to display disruptive behaviors in class, miss homework frequently, exhibit violent behaviors on the playground, fail subjects, be retained and, if the behaviors persist, quit school. Moreover, engagement should also be considered as an important school outcome, eliciting more or less supportive reactions from educators. For example, children who display school-engaged behaviors are likely to receive motivational and instructional support from their teachers. The opposite may also be true. But what makes student engage more or less? The relevant literature indicates that personal variables (e.g., sensory, motor, neurodevelopmental, cognitive, motivational, emotional, behavior problems, learning difficulties, addictions), social and/or cultural variables (e.g., negative family conditions, child abuse, cultural deprivation, ethnic conditions, immigration), or school variables (e.g., coexistence at school, bullying, cyberbullying) may concurrently hinder engagement, preventing the student from acquiring the learnings in the same conditions as the rest of the classmates.

Chapter Four explores how bullying may indicate the beginning of a generally antisocial and rule-breaking behavior pattern that can extend into adulthood, and presents successful programs and interventions. The internet has greatly enhanced access to, dissemination, and sale of child pornography, which is a profitable industry estimated to generate billions of dollars worldwide. While efforts to address the issue of sexual exploitation of children may be slow, the capabilities of offenders to organize, communicate over the internet, and harness technology are unequivocally fast. Protection of children against cyber exploitation has become imperative, and measures should be taken that are specific and targeted to provide specialized victim identification capabilities; adequate protection for children using the internet; genuine participation of children; a full and responsible private sector; and finally, coordinated, effective, and structured international cooperation to protect all children. *Combating the Exploitation of Children in Cyberspace: Emerging Research and Opportunities* provides innovative research for understanding all elements of combating cyber exploitation of children including the roles of law enforcement, international organizations, and the judicial system and educating children and their families to the dangers of the independent internet usage through cyberspace awareness programs. This book provides a fully-contextualised, multidisciplinary examination of bullying and violence in South Korean society. Bullying and violence has been a pressing societal issue since 2011, having been labelled as a 'social evil' to be eradicated by the government. However, the issue has been incorrectly confined to schools when in fact it is widespread in society and in professional settings, as Bax argues in this original new text. Through twenty in-depth case studies and original case material from a Juvenile Detention Centre, Bax examines the historical, cultural, political and social contexts of bullying and violence to better understand the nature of these crimes, the perpetrators, and how they come together in the broader cultural landscape within which the individual, the family, the school and the community are embedded. Police intimidation, legal harassment, defamation and intimidation campaigns offline and increasingly online, pressure - economic or otherwise - from editors or media owners and sponsors, detentions, threats and physical violence: journalists are constantly exposed to these threats by those who feel threatened by their work. The murder of investigative journalist Daphne Caruana Galizia in October 2017 sent shock waves through Europe. Violence and acts of harassment against journalists have become alarmingly frequent, as was laid bare in the Council of Europe's 2017 survey of 940 journalists across the continent. This follow-up study is about the human cost to journalists who seek to hold the powerful to account. It is based on in-depth interviews with 20 journalists who use their reporting skills to expose corruption, injustice and abuses, often putting their safety at risk. They share their insights into

the realities of practising cutting-edge journalism while facing aggression, intimidation and vicious cyber-attacks. Too often the necessary protections fail and crimes against journalists go unpunished. The freedom of the media to report without censorship or fear of reprisals is an essential pre-condition of democratic societies. This study represents a call for action to the 47 member states of the Council of Europe, with practical and forward-looking recommendations for ways to establish effective protection for journalists to enable them to safely fulfil their vital public watchdog role.

This book explores interpersonal situations in which weak or vulnerable people find themselves and the ways in which others help create, sustain, and eradicate such social dynamics.

Vladimir Shlapentokh and Eric Beasley demonstrate that people can gain power over each other and then abuse this power because of unequal resource conditions. The authors define resources as the means necessary for satisfaction or achievement of needs or goals, such as wealth, physical strength, intellectual capacity and information, sexual attractiveness, and status. This volume is different from existing social science books on inequality and vulnerability, which address relations between people of different social positions, races, genders, ages, and places of residence confronting each other in political, economic, and cultural battles. This book focuses on people who become the victims of those whom they know personally-relatives, colleagues, neighbors. The authors argue that unequal resource distribution among members of social units is the main cause of conflict and ultimately creates situations where members of a social unit can abuse other members of the same unit.

The aim of this book is to help teachers, school governors, and parents work towards reducing the effects of behaviour which can, at worst, blight the lives of victims into adulthood and encourage antisocial and violent behaviour in those who get away with bullying.
