The Olympian was Leyland's answer to the competition that was threatening to take custom away from its second-generation OMO double-deck products. Simpler than the London Transportcentric Titan but, unlike that integral model, able to respond to the market by being offered as a chassis for bodying by the bodybuilder of the customer's choice, the Olympian was an immediate success and soon replaced both the Atlantean and Bristol VRT as the standard double-decker of the NBC. It wasn't until 1984 that London Transport itself dabbled with the model, taking three for evaluation alongside trios of contemporary double-deckers.The resulting L class spawned an order for 260 more in 1986, featuring accessibility advancements developed by LT in concert with the Ogle design consultancy, but the rapid changes engulfing the organisation meant that no more were ordered. During the 1990s company ownerships shifted repeatedly as the ethos of competition gave way to the cold reality of big business, an unstable situation which even saw London's bus operations broken up.The L class was split between three new companies, but the backlog of older vehicles to replace once corporate interests released funding ensured the buses up to a further decade in service. Finally, as low-floor buses swept into the capital at the turn of the century, Olympian operation at last declined, and the final examples operated early in 2006.This profusely illustrated book describes the diversity of liveries, ownerships and deployments that characterised the London Leyland Olympians' two decades of service.

Bus Rapid Transit (BRT) is commonly discussed as an affordable way for cities to build sustainable rapid transport infrastructure. This book is the first to offer an in-depth analysis of BRT, examining the opportunities it presents along with the significant challenges cities face in its implementation. A wide range of contributors from both developed and developing countries bring expertise in fields ranging from engineering, planning and public policy to economics and urban design to provide a big picture assessment of BRT as part of a process for restructuring transit systems. Academically rigorous, based on five years of research conducted by the BRT Centre of Excellence in Chile, the book is written in an accessible style making it a valuable resource for academic researchers and postgraduate students as well as policy makers and practitioners.

Presents a travel guide to England and Wales, providing recommendations on hotels, restaurants, shopping, local transportation, sights of interest, and nightlife.

Small Canadian cities confront serious social issues as a result of the neoliberal economic restructuring practiced by both federal and provincial governments since the 1980s. Drastic spending reductions and ongoing restraint in social assistance, income supports, and the provision of affordable housing, combined with the offloading of social responsibilities onto municipalities, has contributed to the generalization of social issues once chiefly associated with Canada's largest urban centres. As the investigations in this volume illustrate, while some communities responded to these issues with inclusionary and progressive actions others were more exclusionary and reactive—revealing forms of discrimination, exclusion, and “othering” in the implementation of practices and policies. Importantly, however their investigations reveal a broad range of responses to the social issues they face. No matter the process and results of the proposed solutions, what the contributors uncovered were distinctive attributes of the small city as it struggles to confront increasingly complex social issues. If local governments accept a social agenda as part of its responsibilities, the contributors to Small Cities, Big Issues believe that small cities can succeed in reconceiving community based on the ideals of acceptance, accommodation, and inclusion.

The Committee's report examines a range of safety and environmental issues regarding technological developments in the design of motor vehicles under the following headings: industrial advantage and vehicle technology; the environment and the car of the future, carbon emissions and European standards; future fuels and technologies; incentives for low carbon and alternative fuel cars; vehicle safety technology; telematics for intelligent transport systems and law enforcement, including satellite location technology and in-vehicle technology for crime prevention; consumer awareness, safety and environmental information, and the car maintenance sector.

Public Transport provides an accessible introductory text to the field of public transport systems, covering bus, coach, rail, metro, domestic air and taxi modes. The market structure is set out, together with data collection methods. The technology of bus and rail systems is introduced with particular reference to peak capacity and energy consumption. An analysis of cost structures and costing methods leads into a review of pricing concepts and their application. In addition to issues related to urban systems, specific chapters cover rural public transport and the long-distance sector. A concluding chapter examines long-run policy issues, such as likely population changes and scope for substitution of travel. The primary context taken is that of the British Isles, drawing extensively on data such as the National Travel Survey in England. However, the principles and findings are also broadly applicable to countries of similar per capita income and population density. This sixth edition introduces a new chapter on data collection and survey methods for public transport systems in addition to a general update of the text to reflect the latest statistical evidence, research findings and policy changes. Public Transport is an essential textbook for both students in transport and those in related fields. This is an invaluable resource for transport planners in local authorities and consultancies.

Road passenger transport management is an important role, involving the planning and coordinating of passenger transport operations, including routes and schedules.

Managers ensure that passengers reach their destinations safely, on time and in the most cost-effective way. Road Passenger Transport Management covers all the essential tasks a transport manager is expected to master. Road Passenger Transport Management provides tips and tools for working with customers, planning routes and scheduling delivery times, as well as managing a team of supervisors, administration staff and drivers. The authors include guidelines for coordinating staff training and arranging vehicle maintenance, MOTs and tax payments, as well as organizing vehicle replacements and managing contracts and developing new business. This is a contributed book, with

expertise shared from well-known academics and practitioners who have spent many years in the passenger transport field. The tools and case studies in this vital new guide will enable readers to learn new skills or build on existing expertise. Online supporting resources include sample performance reports and target assessment forms.

Some vols. include supplemental journals of "such proceedings of the sessions, as, during the time they were depending, were ordered to be kept secret, and respecting which the injunction of secrecy was afterwards taken off by the order of the House".

Get Ready For The Adventure Of A Lifetime! This is a Black and White edition of Travel Like a Local map book. Are you planning your next vacation abroad and you're ready to explore? Do you want to be prepared for everything? Are you ready to experience every new place you visit just like a local? Well, with this amazing New Westminster (Canada) travel map you're all set and ready to go! In the New Westminster (Canada) map you can see all the available means of transport, bus stops and routes so you can always know how to get everywhere. And because we know that a vacation is not only about the roads and busses, the map gives you many options for eating, drinking and having a good time! We carefully marked all the restaurants, bars and pubs so you can always find one that is nearby. In the New Westminster (Canada) map you will also find the best places to go shopping, the most famous and must-see sights, churches and more. And if an emergency comes up, there are markings of police stations and hospitals everywhere for your convenience. The city is also organized in sections so you can better find your way around. So what are you waiting for? Pack your bags, get your New Westminster (Canada) map and let's get started! Just Click "Add To Cart Now"

Government targets are increasingly concerned with the outcome of services instead of the inputs. These targets can involve partnerships between national, regional and local bodies as well as private companies, which is known as the delivery chain. The Audit Commission, and National Audit Office have combined to look at the local and national aspects of three targets: Bus services; affordable housing; childhood obesity. This report looks at bus usage, which is likely to meet its target of a 10% increase by 2010.

However this is mainly due to the increase in London, where there is a much clearer delivery chain and tighter regulation.

The Transport Committee reports that extensive cuts to rural, evening and weekend bus services are damaging the ability of many people - especially the old, young or disabled - to participate in employment, education or voluntary work and to access vital services such as healthcare and retail facilities. In a review of England's bus services (outside London) after the Spending Review, the Committee warns that even deeper cuts in bus services are likely in 2012-13, as local authorities struggle to deal with budgetary reductions, and calls for the concessionary travel scheme to be preserved so that the elderly and disabled continue to enjoy free bus travel. The Committee also concludes that the concessionary fares scheme was 'discriminatory' because it did not apply to most community transport providers - usually independent charities that provide transport such as dial-a-ride bus services. It calls on the Department for Transport to monitor the extent of service cutbacks made this year and to review service provision again after BSOG (Bus Service Operator Grant) grant cuts take effect in 2012 - 13 so that it can analyse and draw conclusions about the wider costs and benefits of its policy changes to the country as a whole. The Local Government Association should identify and disseminate information about good and bad practice in the delivery of cost effective, flexible services including community transport and/or area-based transport integration. And local authorities and commercial operators must consult more widely where services are being changed
