Lizzy Albright and the Attic Window
Summary
The mage council in the Kingdom of Ailear is up in arms over a sorceress who has assembled an army of grackles. She is invincible. They decide their highest priority is to find a missing princess that was taken to another world far away. It's Christmas Eve 1964 and Lizzy Albright is celebrating her 10th birthday with her family in Overland Park, Kansas. Later that day the family make a journey to Cordelia, Kansas to spend Christmas week in the old family mansion with Lizzy's granny, Esther McHale. That night, Lizzy discovers an old quilt in a secret drawer of the cedar chest in the attic. The names of the quilt blocks spark her imagination. She is allowed to sleep under the quilt but is awoken by a tapping noise. She discovers a goose outside the attic window as a winter storm is raging. The goose urges Lizzy to come with her because their kingdom has befallen a curse. The goose believes that Lizzy is the lost princess and is the only one who can break the curse. In the Kingdom of Ailear, we learn that Calixta, a sorceress, and Beatrice, the queen, are related. Beatrice is barren and desperately wants a child. Calixta assists by making a fertility potion,

with the caveat that Queen Beatrice's first grandchild is handed over to the sorceress. Beatrice has her child and years pass. The royal grandchild is born, Beatrice has schemed to betray Calixta by sending the child with a goose through the Tunnel of Stars. The sorceress returns and puts the Groaning Stone Curse on the castle and its inhabitants and informs everyone that the only one who can reverse the curse is the royal child. For ten years the mages are doing what they must in order to find the child, but also find a way to save her from the hands of the sorceress. The plot ultimately succeeds and the kingdom is saved. There are unexpected plot twists that are revealed during the final chapters of the story. Ricky Tims - Kat Bowser 2020

Two men played a crucial role in the creation and early history of the National Park Service: Stephen T. Mather, a public relations genius of sweeping vision, and Horace M. Albright, an able lawyer and administrator who helped transform that vision into reality. In *Creating the National Park Service*, Albright and his daughter, Marian Albright Schenck, reveal the previously untold story of the critical "missing years" in the history of the service. During this period, 1917 and 1918, Mather's problems with manic depression were kept hidden from public view, and Albright, his able and devoted assistant, served as acting director and assumed Mather's responsibilities. Albright played a decisive part in the passage of the National Park Service Organic Act of 1916; the formulation of principles and policies for management of the parks; the defense of the parks against exploitation by ranchers, lumber companies, and mining interests during World War I; and other issues crucial to the future of the fledgling park system. This authoritative behind-the-scenes history sheds light on the early days of the most popular of all federal agencies while painting a vivid picture of American life in the early

twentieth century.

Business Analytics refers to various categories of analytical approaches for modelling different business situations and arriving at solutions and strategies for optimal decision-making in marketing, finance, operations, organizational behaviour and other managerial processes. Thus, Business Analytics today refers to different approaches for modelling and arriving at assessing and predicting risk, predicting market preferences, project feasibility, customer segmentation, inherent and underlying dimensions in consumer preferences, factors leading to probability of purchase, preferred segments in financial and credit card industry, probability of attrition in large organizations, etc. The myriad of modelling and other analytical approaches which constitute Business Analytical applications in Indian Industry today include predominantly:

- Determining which attributes in a product are considered significant by the market and which are found to be significantly satisfactory—Gap Analysis.
- Analytical Modelling by Factor and Cluster Analysis.
- Analytical Modelling by Logistics Regression and Discriminant Analysis.
- Segmentation of primary target market by Heuristic Modelling such as RFM (recency, frequency, monetary) analysis.
- Segmentation of target market based on large databases using Decision Tree approaches such as CHAID (Chi-square Automatic Interaction Detection) and other Classification and Regression Trees.
- Determining Linkages between unobserved constructs such as customer satisfaction and factors leading to it, using Structural Equation Modelling (SEM).
- Determining relative preferences in consumer perceptions by Conjoint Analysis.

In this book, the author has discussed these analytical approaches following a classroom teaching format, drawing from her extensive teaching experience spanning over 30 years. The book first discusses all important concepts and then case studies are discussed which emulate real-life managerial situations.
