This book is a collection of fictionalised case studies of everyday ethical dilemmas and challenges, encountered in the process of conducting global health research in places where the effects of global, political and economic inequality are particularly evident. It is a training tool to fill the gap between research ethics guidelines, and their implementation 'on the ground'. The case studies, therefore, focus on 'relational' ethics: ethical actions and ideas that

Engineers and ethicists participated in a workshop to discuss the responsible development of new technologies. Presenters examined four areas of engineering--sustainability, nanotechnology, neurotechnology, and energy--in terms of the ethical issues they present to engineers in particular and society as a whole. Approaches to ethical issues include: analyzing the factual, conceptual, application, and moral aspects of an issue; evaluating the risks and responsibilities of a particular course of action; and using theories of ethics or codes of ethics developed by engineering societies as a basis for decision making. Ethics can be built into the education of engineering students and professionals, either as an aspect of courses already being taught or as a component of engineering projects to be examined along with research findings. Engineering practice workshops can also be effective, particularly when they include discussions with experienced engineers. This volume includes papers on all of these topics by experts in many fields. The consensus among workshop participants is that material on ethics should be an ongoing part of

This book expands the current discussion on ethics, addressing the gap between "headline" ethics cases, which are often extreme and taken from a business context, and the everyday ethical challenges that we all face in school, work, relationships, and communities. Case studies throughout demonstrate concepts and provide opportunities for readers to apply theory as they consider everyday issues such as the temptation to lie about an arrest on a job application, peer pressure to steal or drink, and the implications of "ratting out" a classmate who is cheating or a co-worker who is stealing. By including a broad array of ethical challenges, this book makes ethics more accessible to the reader. Drawing from several academic disciplines, including social psychology and organizational behavior, this book explores the personal and environmental factors that influence our ethical decision-making. The book is appropriate for ethics courses in an array of disciplines as well as anyone interested in ethical challenges.

illustrative case studies and authoritative commentaries by mediation specialists that offer insight for handling ethical challenges with clarity and deliberateness. Waldman begins with an introductory discussion on mediation's underlying values, its regulatory codes, and emerging models of practice. Subsequent chapters treat ethical dilemmas known to vex even the most experienced practitioner: power imbalance, conflicts of interest, confidentiality, attorney misconduct, cross-cultural conflict, and more. In each chapter, Waldman analyzes the competing values at stake and introduces a challenging case, which is followed by commentaries by leading mediation scholars who discuss how they would handle the case and why. Waldman concludes each chapter with a synthesis that interprets the commentators' points of agreement and explains how different operating premises lead to different visions of what an ethical mediator should do in a given case setting. Evaluative, facilitative, narrative, and transformative mediators are all represented. Together, the commentaries showcase the vast diversity that characterizes the field today and reveal the link between mediator philosophy, method, and process of ethical deliberation.
