After much debate by business professionals, organizational conflict is now considered normal and legitimate; it may even be a positive indicator of effective organizational management. Within certain limits, conflict can be essential to productivity. This book contributes to the investigation of organizational conflict by analyzing its origins, forms, benefits, and consequences. Conflict has benefits: it may lead to solutions to problems, creativity, and innovation. In contrast, little or no conflict in organizations may lead to stagnation, poor decisions, and ineffectiveness. Managing Conflict in Organizations is a vigorous analysis of the rational application of conflict theory in organizations. Conflict is inevitable among humans. It is a natural outcome of human interaction that begins when two or more social entities engage one another while striving to attain their own objectives. Relationships among people or organizations become incompatible or inconsistent when two or more of them desire a similar resource that is in short supply; when they do not share behavioral preferences regarding their joint action; or when they have different attitudes, values, beliefs, and skills. This book examines these root causes of organizational conflict and offers constructive perspectives on its consequences.

The Allegory of the Cave, or Plato's Cave, was presented by the Greek philosopher Plato in his work Republic (514a–520a) to compare "the effect of education (???????) and the lack of it on our nature". It is written as a dialogue between Plato's brother Glaucon and his mentor Socrates, narrated by the latter. The allegory is presented after the analogy of the sun (508b–509c) and the analogy of the divided line (509d–511e). All three are characterized in relation to dialectic at the end of Books VII and VIII (531d–534e). Plato has Socrates describe a group of people who have lived chained to the wall of a cave all of their lives, facing a blank wall. The people watch shadows projected on the wall from objects passing in front of a fire behind them, and give names to these shadows. The shadows are the prisoners' reality.

Through the integration of the Christian worldview and business ethics, this book provides Christians with a mental framework with which to answer these important questions. Beginning with Genesis as the foundation for the Christian's worldview and the Ten Commandments as the outline for the Christian's ethical obligations, the authors develop principles upon which ethical choices can be made, even when working in a primarily non-Christian-oriented business environment. The book is designed to be helpful both to those beginning their career in business and those already employed in business who struggle with how to engage in today's business environment while maintaining their commitment to God's vision for life to be both meaningful and honorable. Topics of business ethics such as employee rights, discrimination, technology and privacy, insider trading and accounting fraud, and the special challenges of working internationally are covered. The added value this book brings to these discussions lies in its serious consideration of the Christian worldview as foundational to ethical decision-making in everyday areas of business.

Individuals are generally considered morally responsible for their actions. Who or what is responsible when those individuals become part of business organizations? Can we correctly ascribe moral responsibility to the organization itself? If so, what are the grounds for this claim and to what extent do the individuals also remain morally responsible? If not, does moral responsibility fall entirely to specific individuals within the organization and can they be readily identified? A perennial question in business ethics has concerned the extent to which business organizations can be correctly said to have moral responsibilities and obligations. In philosophical terms, this is a question of "corporate moral agency." Whether firms can be said to be moral agents and to have the capacity for moral responsibility has significant practical consequences. In most legal systems in the world, business firms are recognized as "persons" with the ability to own property, to maintain and defend lawsuits, and to self-organize governance structures. To recognize that these "business persons" can also act morally or immorally as organizations, however, would justify the imposition of other legal constraints and normative expectations on organizations. In the criminal law, for example, the idea that an organized firm may itself have criminal culpability is accepted in many countries (such as the United States) but rejected in others (such as Germany). This book collects new contributions by leading business scholars in business ethics, philosophy, and related disciplines to extend our understanding of the "moral responsibility of firms."

The 21st century is the age of "neo-liberalism" – a time when the free market is spreading to all areas of economic,

political and social life. Yet how is this changing our individual and collective ethics? Is capitalism also becoming our new morality? From the growing popular demand for corporate social responsibility to personal desire for "work-life balance" it would appear that non-market ideals are not only surviving but also thriving. Why then does it seem that capitalism remains as strong as ever? The Ethics of Neoliberalism boldly proposes that neoliberalism strategically co-opts traditional ethics to ideologically and structurally strengthen capitalism. It produces "the ethical capitalist subject" who is personally responsible for making their society, workplace and even their lives "more ethical" in the face of an immoral but seemingly permanent free market. Rather than altering our morality, neoliberalism "individualizes" ethics, making us personally responsible for dealing with and resolving its moral failings. In doing so, individuals end up perpetuating the very market system that they morally oppose and feel powerless to ultimately change. This analysis reveals the complex and paradoxical way capitalism is currently shaping us as "ethical subjects". People are increasingly asked to ethically "save" capitalism both collectively and personally. This can range from the "moral responsibility" to politically accept austerity following the financial crisis to the willingness of employees to sacrifice their time and energy to make their neoliberal organizations more "humane" to the efforts by individuals to contribute to their family and communities despite the pressures of a frenetic global business environment. Neoliberalism, thus, uses our ethics against us, relying on our "good nature" and sense of personal responsibility to reduce its human cost in practice. Ironically
