Many of the articles consider the transitional experiences of ethnically diverse patients, women, the elderly, and other minority populations. Key Topics Discussed: Situational transitions, including discharge and relocation transitions (hospital to home, stroke recovery) and immigration transitions (psychological adaptation and impact of migration on family health) Educational transitions, including professional transitions (from RN to BSN and student to professional) Health and illness transitions, including self-care post heart failure, living with chronic illness, living with early dementia, and accepting palliative care Organization transitions, including role transitions from acute care to collaborative practice, and hospital to community practice Nursing therapeutics models of transition, including role supplementation models and debriefing models

Exploring Education and Professional Practice Kathleen Mahon, Susanne Francisco, Stephen Kemmis, 2016-12-20 This book was written to help people understand and transform education and professional practice. It presents and extends the theory of practice architectures, and offers a contemporary account of what practices are composed of and how practices

shape and are shaped by the arrangements with which they are enmeshed in sites of practice. Through its empirically-based case chapters, the book demonstrates how the theory of practice architectures can be used as a theoretical, analytical, and transformational resource to generate insights that have important implications for practice, theory, policy, and research in education and professional practice. These insights relate to how practices are shaped by arrangements (and other practices) present in specific sites of practice, including early childhood education settings, schools, adult education, and workplaces. They also relate to how practices create distinctive intersubjective spaces, so that people encounter one another in particular ways (a) in particular semantic spaces, (b) that are realised in particular locations and durations in physical space-time, and (c) in particular social spaces. By applying such insights, readers can work towards changing practices by transforming the practice architectures that make them possible.

The Future of Nursing Institute of Medicine, Committee on the Robert Wood Johnson Foundation Initiative on the Future of Nursing, at the Institute of Medicine, 2011-02-08 The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles-including limits on nurses' scope of practice-should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
