This is a comprehensive reference grammar of Tariana, an endangered Arawak language from a remote region in the northwest Amazonian jungle. Its speakers traditionally marry someone speaking a different language, and as a result most people are fluent in five or six languages. Because of this rampant multilingualism, Tariana combines a number of features inherited from the protolanguage with properties diffused from neighbouring but unrelated Tucanoan languages. Typologically unusual features of the language include: an array of classifiers independent of genders, complex serial verbs, case marking depending on the topicality of a noun, and double marking of case and of number. Tariana has obligatory evidentiality: every sentence contains a special element indicating whether the information was seen, heard, or inferred by the speaker, or whether the speaker acquired it from somebody else. This grammar will be a valuable source-book for linguists and others interested in natural languages.

This book focuses on software architecture and the value of architecture in the development of long-lived, mission-critical, trustworthy software-systems. The author introduces and demonstrates the powerful strategy of “Managed Evolution,” along with the engineering best practice known as “Principle-based Architecting.” The book examines in detail architecture principles for e.g., Business Value, Changeability, Resilience, and Dependability. The author argues that the software development community has a strong responsibility to produce and operate useful, dependable, and trustworthy software. Software should at the same time provide business value and guarantee many quality-of-service properties, including security, safety, performance, and integrity. As Dr. Furrer states, “Producing dependable software is a balancing act between investing in the implementation of business functionality and investing in the quality-of-service properties of the software-systems.” The book presents extensive coverage of such concepts as: Principle-Based Architecting Managed Evolution Strategy The Future Principles for Business Value Legacy Software Modernization/Migration Architecture Principles for Changeability Architecture Principles for Resilience Architecture Principles for Dependability The text is supplemented with numerous figures, tables, examples and illustrative quotations. Future-Proof Software-Systems provides a set of good engineering

practices, devised for integration into most software development processes dedicated to the creation of software-systems that incorporate Managed Evolution.
