Presented from the viewpoint of the history of mathematics, this book explores both epistemological aspects of Chinese traditional mathematical astronomy and lunisolar calendrical calculations. The following issues are addressed: (1) connections with non-Chinese cultural areas; (2) the possibility or impossibility of using mathematics to predict astronomical phenomena, a question that was constantly raised by the Chinese from antiquity through medieval times; (3) the modes of representation of numbers, and in particular the zero, found in the context of Chinese calendrical calculations; and (4) a detailed analysis of lunisolar calendrical calculations. Fully worked-out examples and comparisons between the results of calculations and the content of Chinese historical calendars from various periods are provided. Traditional Chinese calendrical and mathematical astronomy consists of permanently reformed mathematical procedures designed to predict, but not explain, phenomena pertaining to astronomy and related areas. Yet, despite appearances, models of the mathematical techniques hidden behind this voluminous corpus reveal that they depend on a limited number of clear-cut mathematical structures. Although only a small fraction of these techniques have been fully studied, what is known surprisingly broadens our knowledge of the history of Chinese mathematics. Sinologists interested in the history of Chinese science, and anyone interested in the history of Chinese mathematics, the Chinese calendar, and the history of Chinese mathematical astronomy from its origin (104 BC) to its European reform (AD 1644) will find this book very useful. The present English language edition is a fully revised and updated version of the French original. Even though this is a research monograph in sinology, no particular sinological background is required, although a basic understanding of 'concrete mathematics' is needed. From the reviews of the French edition: This is a demanding, rigorous book to read ... worth the concentrated study it requires. The rewards are not only in the details but in the general overview that ...[it] provides. Joseph Dauben, EASTM, 2011 ...first Work in a Western language to turn to for anyone interested in the details of Chinese calendrical computations. Benno Van Dalen, ISIS, 2011 Martzloff's careful scholarship and his overall look at the calendar beyond astronomical calculations, ..., make this book a most valuable contributions to a field of increasing interest. U. D'Ambrosio, Mathematical Reviews, 2013

Few ideas in Chinese discourse are as ubiquitous as ming, variously understood as "command," "allotted lifespan," "fate," or "life." In the earliest days of Chinese writing, ming was already present, invoked in divinations and etched into ancient bronzes; it has continued to inscribe itself down to the twenty-first century in literature and film. This volume assembles twelve essays by some of the most eminent scholars currently working in Chinese studies to produce the first

comprehensive study in English of ming's broad web of meanings. The essays span the history of Chinese civilization and represent disciplines as varied as religion, philosophy, anthropology, literary studies, history, and sociology. Cross-cultural comparisons between ancient Chinese views of ming and Western conceptions of moira and fatum are discussed, providing a specific point of departure for contrasting the structure of attitudes between the two civilizations. Ming is central to debates on the legitimacy of rulership and is the crucial variable in Daoist manuals for prolonging one's life. It has preoccupied the philosopher and the poet and weighed on the minds of commoners throughout imperial China. Ming was the subject of the great critic Jin Shengtan's last major literary work and drove the narrative of such classic novels as *The Investiture of the Gods* and *The Romance of the Three Kingdoms*. Confucius, Mencius, and most other great thinkers of the classical age, as well as those in ages to come, had much to say on the subject. It has only been eschewed in contemporary Chinese philosophy, but even its effacement there has ironically turned it into a sort of absent cause. Contributors: Stephen Bokenkamp, Zong-qi Cai, Robert Campany, Woei Lien Chong, Deirdre Sabina Knight, Christopher Lupke, Mu-chou Poo, Michael Puett, Lisa Raphals, P. Steven Sangren, David Schaberg, Patricia Sieber.

It's another new year celebrating everything under the Sun, including the Moon, with *The Old Farmer's Almanac*, America's oldest continuously published periodical! Always timely, topical, and distinctively "useful, with a pleasant degree of humor," the Almanac has been beloved for centuries by people from all walks of life. As the nation's iconic calendar, the 2020 edition will forecast cultural, culinary, and other life-changing trends; preview notable astronomical events; provide time- and money-saving tips for gardeners of all varieties; set the hook for best fishing days; forecast traditionally 80 percent-accurate weather; and cover a range of related topics, including anniversaries, folklore, husbandry, home remedies, recipes, amusement, contests, and more--too much more to mention--all in the inimitable way it has done since 1792.

Though there are a number of well-written works on Chinese divination, there are none that deal with the three sophisticated devices that were employed by the Chinese Astronomical Bureau in the eleventh century and for hundreds of years thereafter. Chinese experts applied the methods associated with these devices to both weather forecasting and to the interpretation of human affairs. Hidden by a veil of secrecy, these methods have always been relatively little known other than by their names. The first work in any language to explore these three methods, known as *sanshi* (three cosmic boards), this book sheds light on a topic which has been shrouded in mystery for centuries, having been kept secret for many years by the Chinese Astronomical Bureau.

One of the most complete and easy-to-understand book on classical Feng Shui, this revision includes coverage of the next level of a method of classical feng shui called *Flying Start*. Photographs and floorplans are included.

The Butterfly Lovers Story, sometimes called the Chinese Romeo and Juliet, has been enduringly popular in China and Korea. In Transforming Gender and Emotion, Sookja Cho demonstrates why the Butterfly Lovers Story is more than just a popular love story. By unveiling the complexity of themes and messages concealed beneath the tale's modern classification as a tragic love story, this book reveals the tale as a rich academic subject for students of human emotions and relationships, comparative geography and culture, and narrative adaptation. By examining folk beliefs and ideas that abound in the narrative—including rebirth and a second life, the association of human souls and butterflies, and women's spiritual power—this book presents the Butterfly Lovers Story as an example of local religious narrative. The book's cross-cultural comparisons, best manifested in its discussion of a shamanic ritual narrative version from the Cheju Island of Korea, frame the story as a catalyst for inclusive, expansive discussion of premodern Korean and Chinese literatures and cultures. This scrutiny of the historical and cultural background behind the formation and popularization of the Cheju Island version sheds light on important issues in the Butterfly Lovers Story that are not frequently discussed—either in past examinations of this particular narrative or in the overall literary studies of China and Korea. This new, open approach presents an innovative framework for understanding premodern literary and cultural space in East Asia.

This innovative sourcebook builds a dynamic understanding of China's early medieval period (220–589) through an original selection and arrangement of literary, historical, religious, and critical texts. A tumultuous and formative era, these centuries saw the longest stretch of political fragmentation in China's imperial history, resulting in new ethnic configurations, the rise of powerful clans, and a pervasive divide between north and south. Deploying thematic categories, the editors sketch the period in a novel way for students and, by featuring many texts translated into English for the first time, recast the era for specialists. Thematic topics include regional definitions and tensions, governing mechanisms and social reality, ideas of self and other, relations with the unseen world, everyday life, and cultural concepts. Within each section, the editors and translators introduce the selected texts and provide critical commentary on their historical significance, along with suggestions for further reading and research. "As the first substantial investigation of commercial art in China, Selling Happiness explains how the early twentieth century Chinese public came to accept Western style art as mainstream and the heretofore ignored process by which the Chinese art world became (in some sectors at least) thoroughly cosmopolitan. A monumental study of the most important genre of modern Chinese commercial art, this volume will appeal not only to historians of Chinese art but also to those interested in literary, economic, and social history. It will be an essential resource for comparative studies of visual culture."--BOOK JACKET. Title Summary field provided by Blackwell North America, Inc. All Rights Reserved

The ancient Chinese were profoundly influenced by the Sun, Moon and stars, making persistent efforts to mirror astral phenomena in shaping their civilization. In this pioneering text, David W. Pankenier introduces readers to a seriously understudied field, illustrating how astronomy shaped the culture of China from the very beginning and how it influenced areas as disparate as art, architecture, calendrical science, myth, technology, and political and military decision-making. As elsewhere in the ancient world, there was no positive distinction between astronomy and astrology in ancient China, and so astrology, or more precisely, astral omenology, is a principal focus of the book. Drawing on a broad range of sources, including archaeological discoveries, classical texts, inscriptions and paleography, this thought-provoking book documents the role of astronomical phenomena in the development of the 'Celestial Empire' from the late Neolithic through the late imperial period.

Previous translations and descriptions of Li Qingzhao are molded by an image of her as lonely wife and bereft widow formed by centuries of manipulation of her work and legacy by scholars and critics (all of them male) to fit their idea of a what a talented woman writer would sound like. The true voice of Li Qingzhao is very different. A new translation and presentation of her is needed to appreciate her genius and to account for the sense that Chinese readers have always had, despite what scholars and critics were saying, about the boldness and originality of her work. The introduction will lay out the problems of critical refashioning and conventionalization of her carried out in the centuries after her death, thus preparing the reader for a new reading. Her songs and poetry will then be presented in a way that breaks free of a narrow autobiographical reading of them, distinguishes between reliable and unreliable attributions, and also shows the great range of her talent by including important prose pieces and seldom read poems. In this way, the standard image of Li Qingzhao, exemplified by a handful of her best known and largely misunderstood works, will be challenged and replaced by a new understanding. The volume will present a literary portrait of Li Qingzhao radically unlike the one in conventional anthologies and literary histories, allowing English readers for the first time to appreciate her distinctiveness as a writer and to properly gauge her achievement as a female alternative, as poet and essayist, to the male literary culture of her day.

This book presents a unique approach for studying mechanisms and machines with drawings that were depicted unclearly in ancient Chinese books. The historical, cultural and technical backgrounds of the mechanisms are explained, and various mechanisms described and illustrated in ancient books are introduced. By utilizing the idea for the conceptual design of modern mechanisms, all feasible designs of ancient mechanisms with uncertain members and joints that meet the technical standards of the subjects' time periods are synthesized systematically. Ancient Chinese crossbows (the original crossbow and repeating crossbows), textile mechanisms (silk-reeling mechanism, spinning mechanisms, and looms), and many other artisan's tool mechanisms are used as illustrated examples. Such an approach provides a logical method for the reconstruction designs of ancient mechanisms with uncertain structures. It also provides an innovative direction for researchers to further identify the original structures

of mechanisms and machines with drawings in ancient literature. This book can be used as a textbook and/or supplemental reading material for courses related to history of ancient (Chinese) machinery and creative mechanism design for senior and graduate students.
