

California Internet Voting Task Force

Ammar Alkassar, Melanie Volkamer

The Machinery of Democracy Lawrence D. Norden, Eric Lazarus, Brennan Center for Justice. Task Force on Voting System Security, 2007 The Brennan Center at NYU convened a high-level task force of voting experts from government, academia, and business to systematically analyze various threats to voting technologies that are widely used across the country today. This book offers specific remedies and countermeasures to identify and protect democratic elections from widespread fraud and sabotage.

Point, Click, and Vote R. Michael Alvarez, Thad Edward Hall, 2004 There are serious issues, however, regarding computer security and voter fraud, unequal Internet access across socioeconomic lines (the digital divide), and the civic consequences of moving elections away from schools and other polling places and into private homes and offices. After all, showing up to vote is the most public civic activity many Americans engage in, and it is often their only overt participation in the democratic process.

Electronic Voting and Democracy N. Kersting, H. Baldersheim, 2004-08-18 Electronic and internet voting has become increasingly widespread in recent years, but which countries are the leaders of the movement and who lags behind? Is the digital divide likely to present a permanent challenge to electronic democracy? What are the experiences with regard to online voting, and what are the arguments for and against? *Electronic Voting and Democracy* examines these issues and the contexts in which they are played out, such as problems of legitimacy and the practical considerations that have driven some countries toward electronic voting faster than others.

Secure Electronic Voting Dimitris A. Gritzalis, 2012-12-06 *Secure Electronic Voting* is an edited volume, which includes chapters authored by leading experts in the field of security and voting systems. The chapters identify and describe the given capabilities and the strong limitations, as well as the current trends and future perspectives of electronic voting technologies, with emphasis in security and privacy. *Secure Electronic Voting* includes state-of-the-art material on existing and emerging electronic and Internet voting technologies, which may eventually lead to the development of adequately secure e-voting systems. This book also includes an overview of the legal framework with respect to voting, a description of the user requirements for the development of a secure e-voting system, and a discussion on the relevant technical and social concerns. *Secure Electronic Voting* includes, also, three case studies on the use and evaluation of e-voting systems in three

different real world environments.

E-Voting and Identity Ammar Alkassar, Melanie Volkamer, 2007-12-18 Of interest to both researchers and professionals, this book constitutes the thoroughly refereed post-proceedings of the first International Conference on E-Voting and Identity, VOTE-ID 2007, held in Germany in 2007. The 16 revised full papers here were reviewed and selected from numerous submissions. The papers are organized in sections that include, among many others, remote electronic voting, evaluation of electronic voting systems, and electronic voting in different countries.

Point, Click, and Vote R. Michael Alvarez, Thad E. Hall, 2003-12-31 Whether responding to a CNN.com survey or voting for the NFL All-Pro team, computer users are becoming more and more comfortable with Internet polls. Computer use in the United States continues to grow—more than half of all American households now have a personal computer. The next question, then, becomes obvious. Should Americans be able to use the Internet in the most important polls of all? Some advocates of Internet voting argue that Americans are well suited to casting their ballots online in political elections. They are eager to make use of new technology, and they have relatively broad access to the Internet. Voting would become easier for people stuck at home, at the office, or on the road. Internet voting might encourage greater political participation among young adults, a group that stays away from the polling place in droves. It would hold special appeal for military personnel overseas, whose ability to vote is a growing concern. There are serious concerns, however, regarding computer security and voter fraud, unequal Internet access across socioeconomic lines (the digital divide), and the civic consequences of moving elections away from schools and other polling places and into private homes and offices. After all, showing up to vote is the most public civic activity many Americans engage in, and it is often their only overt participation in the democratic process. In *Point, Click, and Vote*, voting experts Michael Alvarez and Thad Hall make a strong case for greater experimentation with Internet voting. In their words, There is no way to know whether any argument regarding Internet voting is accurate unless real Internet voting systems are tested, and they should be tested in small-scale, scientific trials so that their successes and failures can be evaluated. In other words, you never know until you try, and it's time to try harder. The authors offer a realistic plan for putting pilot remote Internet voting programs into effect n

Confirming Elections T. Hall, L. Atkeson, R. Michael Alvarez, 2012-06-06 This volume brings together a number of essays that citizens, academics, election officials, policy makers, and other stakeholders can read to become better informed about procedures that used today to audit elections and election administration, and to learn more about new approaches to improve existing election audit procedures.

Cybersecurity in Elections Sam van der Staak, Peter Wolf, 2019-07-19 Information and communication technologies are increasingly prevalent in electoral management and democratic processes, even for countries without any form of electronic voting. These technologies offer numerous new opportunities, but also new threats. Cybersecurity is currently one of the

greatest electoral challenges. It involves a broad range of actors, including electoral management bodies, cybersecurity expert bodies and security agencies. Many countries have found that interagency collaboration is essential for defending elections against digital threats. In recent years significant advances have been made in organizing such collaboration at the domestic and international levels. This guide tracks how countries are making progress on improving cybersecurity in elections. Based on an extensive collection of 20 case studies from all over the world, it provides lessons for those wanting to strengthen their defences against cyberattacks.

Society Online Philip N. Howard, Steve Jones, 2004 'Society Online' is not exclusively devoted to a particular technology, or specifically the Internet, but to a range of technologies and technological possibilities labelled 'new media'.

Asking the Right Questions About Electronic Voting National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on a Framework for Understanding Electronic Voting, 2006-04-02 Many election officials look to electronic voting systems as a means for improving their ability to more effectively conduct and administer elections. At the same time, many information technologists and activists have raised important concerns regarding the security of such systems. Policy makers are caught in the midst of a controversy with both political and technological overtones. The public debate about electronic voting is characterized by a great deal of emotion and rhetoric. Asking the Right Questions About Electronic Voting describes the important questions and issues that election officials, policy makers, and informed citizens should ask about the use of computers and information technology in the electoral process—focusing the debate on technical and policy issues that need resolving. The report finds that while electronic voting systems have improved, federal and state governments have not made the commitment necessary for e-voting to be widely used in future elections. More funding, research, and public education are required if e-voting is to become viable.

Rethinking American Electoral Democracy Matthew J. Streb,2015-10-30 While frustration with various aspects of American democracy abound in the United States, there is little agreement over—or even understanding of—what kinds of changes would make the system more effective and increase political participation. Matthew J. Streb sheds much-needed light on all the major concerns of the electoral process in the thoroughly revised third edition of this timely book on improving American electoral democracy. This critical examination of the rules and institutional arrangements that shape the American electoral process analyzes the major debates that embroil scholars and reformers on subjects ranging from the number of elections we hold and the use of nonpartisan elections, to the presidential nominating process and campaign finance laws. Ultimately, Streb argues for a less burdensome democracy, a democracy in which citizens can participate more easily in transparent, competitive elections. This book is designed to get students of elections and American political institutions to think critically about what it means to be democratic, and how democratic the United States really is. Part of the *Controversies in Electoral Democracy and Representation* series, edited by Matthew J. Streb.

Conceptual Modeling for Advanced Application Domains Shan Wang,Katsumi Tanaka,Shuigeng Zhou,Tok Wang Ling,Jihong Guan,Dongqing Yang,Fabio Grandi,Eleni Mangina,Il-Yeol Song,Heinrich C. Mayr,2005-01-14 This book constitutes the refereed joint proceedings of six international workshops held in conjunction with the 23rd International Conference on Conceptual Modeling, ER 2004, in Shanghai, China in November 2004. The 56 revised full papers presented were carefully reviewed and selected from 163 submissions. The papers are organized in topical sections on geographical conceptual modeling; spatial storage, indexing, and data consistency; spatial representation and spatial services; spatial queries and retrieval, Web information integration; Web information mining; conceptual models for Web information; Web information systems and Webservices; systems evolution support in conceptual modeling; temporal and evolution aspects in

Internet-based information systems; schema evolution and versioning in data management; conceptual modeling of agents; agents applications; digital government systems; digital government technologies; e-business systems requirements engineering; and e-business processes and infrastructure.

The European Union and E-Voting (Electronic Voting) Fernando Mendez,Alexander H. Trechsel,2004-08-02 This is the first book to systematically evaluate e-voting from the wider European perspective. It focuses on the European experience, thereby raising key issues at the heart of the social sciences, legal scholarship and technology studies in a penetrating and interdisciplinary manner. It coincides with a crucial juncture for European integration in which the Convention on the Future of Europe and the 2004 Intergovernmental Conference will discuss measures to further democratize the EU.
