An autobiography by the original "shock jock" shares his observations on politics, current affairs, women, and the entertainment business (Piano Solo Songbook). "I think there is a similarity between the infinite big and the infinite smallness of everything," says Yann Tiersen. "It's the same experiment looking through a microscope as it is a telescope." Named after a chapel in a small village on the island of Ushant, Kerber marks a new chapter in critically-acclaimed composer Yann Tiersen's career. A chapter still true to Tiersen's nuanced and subtle approach but one that sets out with his most overtly electronic material to date. Beautifully textured, highly immersive and thoughtfully constructed, Tiersen creates an electronic world, providing an environment in which the piano source exists. A sense of place has often been a central theme in Tiersen's work and here that is no different. Each track is tied to a place mapping out the immediate landscape that surrounds Tiersen's home, linking back to his thoughts on the possibilities of the infinite smallness. This official, exclusive folio is beautifully printed on high-quality, uncoated paper with striking graphic artwork. All seven pieces are presented for solo piano and follow an exclusive introduction to the project.

A runaway train is racing toward five men who are tied to the track. Unless the train is stopped, it will inevitably kill all five men. You are standing on a footbridge looking down on the unfolding disaster. However, a fat man, a stranger, is standing next to you: if you push him off the bridge, he will topple onto the line and, although he will die, his chunky body will stop the train, saving five lives. Would you kill the fat man? The question may seem bizarre. But it's one variation of a puzzle that has baffled moral philosophers for almost half a century and that more recently has come to preoccupy neuroscientists, psychologists, and other thinkers as well. In this book, David Edmonds, coauthor of the best-selling Wittgenstein's Poker, tells the riveting story of why and how philosophers have struggled with this ethical dilemma, sometimes called the trolley problem. In the process, he provides an entertaining and informative tour through the history of moral philosophy. Most people feel it's wrong to kill the fat man. But why? After all, in taking one life you could save five. As Edmonds shows, answering the question is far more complex--and important--than it first appears. In fact, how we answer it tells us a great deal about right and wrong.

Series is designed to present music in a broad context of socio-political, economic, intellectual and religious life.

Universities were driving forces of change in late Renaissance Italy. The Gonzaga, the ruling family of Mantua, had long supported scholarship and dreamed of founding an institution of higher learning within the city. In the early seventeenth century they joined forces with the Jesuits, a powerful intellectual and religious force, to found one of the most innovative universities of the time. Paul F. Grendler provides the first book in any language about the Peaceful University of Mantua, its official name. He traces the efforts of Duke Ferdinando Gonzaga, a prince savant who debated Galileo, as he made his family's dream a reality. Ferdinando negotiated with the Jesuits, recruited professors, and financed the school. Grendler examines the motivations of the Gonzaga and the Jesuits in the establishment of a joint civic and Jesuit university. The University of Mantua lasted only six years, lost during the brutal sack of the city by German troops in 1630. Despite its short life, the university offered original scholarship and teaching. It had the first professorship of chemistry more than 100 years before any other Italian university. The leading professor of medicine identified the symptoms of angina pectoris 140 years before an English scholar named the disease. The star law professor advanced new legal theories while secretly spying for James I of England. The Jesuits taught humanities, philosophy, and theology in ways both similar to and different from lay professors. A superlative study of education, politics, and culture in seventeenth-century Italy, this book reconsiders a period in Italy's history often characterized as one of feckless rulers and stagnant learning. Thanks to extensive archival research and a thorough examination of the published works of the university's professors, Grendler's history tells a new story. -- Kathleen Comerford, Georgia Southern University

This comprehensive textbook, intended for graduate students in couple and family therapy programs as well as for clinicians of diverse orientations, offers descriptive discussions of sex therapy based on the Intersystem Approach, as developed by Gerald Weeks. The Intersystem Approach considers the biology, psychology, couple dyad, family-of-origin, and larger contextual factors of any sexual disorder or issue. It is grounded in systems theory and represents a new understanding of human sexuality and sexual problems. Appropriate for anyone who wants to progress to a more comprehensive and integrative understanding of sexual dysfunctions, this text will teach the reader how to treat the couple, rather than the individual. Now in a second edition, Systemic Sex Therapy presents 12 updated chapters and two new chapters, bringing the material up-to-date with the DSM-5. Each chapter examines the definition and description of a disorder, its etiology, assessment, treatment, research, and future directions. Experts in the field discuss issues ranging from pharmacology, sexual compulsivity, therapy with lesbian and gay couples, to chapters on male and female lack of desire. A standard text in the field, Systemic Sex Therapy integrates couple and sex therapy to inform the treatment of sexual problems, and to give beginning and experienced clinicians the abilities and confidence they need to produce viable change in their patients' lives.

Bridging the fields of conservation, art history, and museum curating, this volume contains the principal papers from an international symposium titled "Historical Painting Techniques, Materials, and Studio Practice" at the University of Leiden in Amsterdam, Netherlands, from June 26 to 29, 1995. The symposium—designed for art historians, conservators, conservation scientists, and museum curators worldwide—was organized by the Department of Art History at the University of Leiden and the Art History Department of the Central Research Laboratory for Objects of Art and Science in Amsterdam. Topics cover the latest art historical research and scientific analyses of original techniques and materials, as well as historical sources, such as medieval treatises and descriptions of painting techniques in historical literature. Chapters include the painting methods of Rembrandt and Vermeer, Dutch 17th-century landscape painting, wall paintings in English churches, Chinese paintings on paper and canvas, and Tibetan thangkas. Color plates and black-and-white photographs illustrate works from the Middle Ages to the 20th century.

A delightful biography of a celebrated Stradivarius cello and an inviting overview of cello music and its preeminent composers and performers by world-famous concert cellist Carlos Prieto. This book presents a semiotic study of the re-elaboration of Christian narratives and values in a corpus of Italian novels published after the Second Vatican Council (1960s). It tackles the complex set of ideas expressed by Italian writers about the biblical narration of human origins and traditional religious language and ritual, the perceived clash between the immanent and transcendent nature and role of the Church, and the problematic notion of sanctity emerging from contemporary narrative.

A quest to find something new by excavating the "deep time" of media's development—not by simply looking at new media's historic forerunners, but by connecting models, machines, technologies, and accidents that have until now remained separated. Deep Time of the Media takes us on an archaeological quest into the hidden layers of media development—dynamic moments of intense activity in media design and construction that have been largely ignored in the historical-media archaeological record. Siegfried Zielinski argues that the history of the media does not proceed predictably from primitive tools to complex machinery; in Deep Time of the Media, he illuminates turning points of media history—fractures in the predictable—that help us see the new in the old. Drawing on original source materials, Zielinski explores the technology of devices for hearing and seeing through two thousand years of cultural and technological

history. He discovers the contributions of "dreamers and modelers" of media worlds, from the ancient Greek philosopher Empedocles and natural philosophers of the Renaissance and Baroque periods to Russian avant-gardists of the early twentieth century. "Media are spaces of action for constructed attempts to connect what is separated," Zielinski writes. He describes models and machines that make this connection: including a theater of mirrors in sixteenth-century Naples, an automaton for musical composition created by the seventeenth-century Jesuit Athanasius Kircher, and the eighteenth-century electrical tele-writing machine of Joseph Mazzolari, among others. Uncovering these moments in the media-archaeological record, Zielinski says, brings us into a new relationship with present-day moments; these discoveries in the "deep time" media history shed light on today's media landscape and may help us map our expedition to the media future.

We are living a huge economic and financial crisis, the worst that humanity has ever experienced. Some may say that the American crisis of 1929 was much harsher and more dramatic, but it was confined to the United States, while the present one includes the whole world, from the East to the West. As a member of the Fondazione Discepolo (a cultural institution founded by my father, Pasquale Discepolo, an engineer, born in New York on 6 November 1917, which has two executive and / or parallel "extensions": the Museo Mineralogico Campano [Mineralogical Museum of the Campania Region] and the Premio Capo d'Orlando [Capo d'Orlando Prize], founded by Dr. Umberto Celentano), on 23 May 2011, I had the great honour of participating in an extremely interesting conference held by the Nobel Prize for Economy Paul Krugman, who had been invited and awarded a prize by the Fondazione Discepolo at Vico Equense (a nice little city near Napoli and Sorrento). Paul Krugman's conference was of extraordinary interest, and touched upon the themes that were the premise for me writing this book in which I offer my almost 43 years of experience on the topic of money. In this book, I also wish to offer some advice to improve one's financial situation as concerns both the family and/or the individual.

The Alchemist The Magician The Sorceress The Necromancer The Warlock The Enchantress Curse of the Black Gold: 50 Years of Oil in the Niger Delta takes a graphic look at the profound cost of oil exploitation in West Africa. Featuring images by world-renowned photojournalist Ed Kashi and text by prominent Nigerian journalists, human rights activists, and University of California at Berkeley professor Michael Watts, this book traces the 50-year history of Nigeria's oil interests and the resulting environmental degradation and community conflicts that have plagued the region. Now one of the major suppliers of U.S. oil, Nigeria is the sixth largest producer of oil in the world. Set against a backdrop of what has been called the scramble for African oil, Curse of the Black Gold is the first book to document the consequences of a half-century of oil exploration and production in one of the world's foremost centers of biodiversity. This book exposes the reality of oil's impact and the absence of sustainable development in its wake, providing a compelling pictorial history of one of the world's great deltaic areas. Accompanied by powerful writing by some of the most prominent public intellectuals and critics in contemporary Nigeria, Kashi's photographs capture local leaders, armed militants, oil workers, and nameless villagers, all of whose fates are inextricably linked. His exclusive coverage bears witness to the ongoing struggles of local communities, illustrating the paradox of poverty in the midst of plenty. The publication of Curse of the Black Gold occurs at a moment of worldwide concern over dependency on petroleum, dubbed by New York Times journalist Thomas Friedman as "the resource curse." Much has been written about the drama of the search for oil—Daniel Yergin's *The Prize* and Ryszard Kapuscinski's *Shah of Shahs* are two of the most widely lauded—but there has been no serious examination of the relations between oil, environment, and community in a particular oil-producing region. *Curse of the Black Gold* is a landmark work of historic significance.

What is fascism? By focusing on the concrete: what the fascists did, rather than what they said, the esteemed historian Robert O. Paxton answers this question. From the first violent uniformed bands beating up "enemies of the state," through Mussolini's rise to power, to Germany's fascist radicalization in World War II, Paxton shows clearly why fascists came to power in some countries and not others, and explores whether fascism could exist outside the early-twentieth-century European setting in which it emerged. "A deeply intelligent and very readable book. . . . Historical analysis at its best." —*The Economist* *The Anatomy of Fascism* will have a lasting impact on our understanding of modern European history, just as Paxton's classic *Vichy France* redefined our vision of World War II. Based on a lifetime of research, this compelling and important book transforms our knowledge of fascism—"the major political innovation of the twentieth century, and the source of much of its pain."
