Whether we're aware of it or not, we spend much of our time in this globalised world in the act of translation. Language is a big part of it, of course, as anyone who has fumbled with a phrasebook in a foreign country will know, but behind language is something far more challenging to translate: culture. As a traveller, a mistranslation might land you a bowl of who-knows-what when you think you asked for noodles, and mistranslations in international politics can be a few steps from serious trouble. But translation is also a way of entering new and exciting worlds, and forging links that never before existed. Linda Jaivin has been translating from Chinese for more than thirty years. While her specialty is subtitles, she has also translated song lyrics, poetry and fiction, and interpreted for ABC film crews, Chinese artists and even the English singer Billy Bragg as he gave his take on socialism to some Beijing rockers. In *Found in Translation* she reveals the work of the translator and considers whether different worldviews can be bridged. She pays special attention to China and the English-speaking West, Australia in particular, but also discusses French, Japanese and even the odd phrase of Maori. This is a free-ranging essay, personal and informed, about translation in its

The Latin course is written entirely in Latin. It consists of two parts: I: Familia Romana -- the fundamental or elementary course. II: Roma Aeterna -- the advanced course, with Indices covering both parts. The direct method is based on the inductive principle of learning. In the text every sentence is intelligible per se, or self-explanatory, because the meaning and function of all new words and grammatical forms are made clear by the context in which they occur, or if necessary, by illustrations or marginal notes using vocabulary already learned. This demands a carefully graded text, but in order to make learning efficient the content should stimulate interest and curiosity and make it easy for the reader to visualise the scenes and situations described. To meet these demands the chapters of Lingua Latina I form a continuous narrative, a sort of Latin novel, which captivates the students so that they look forward to reading the continuation of the story. While reading this story and learning facts about the Roman life and traditions, the students pick up the vocabulary and grammar that will enable them to go on, in Part II, to read a representative selection of Latin literature, both prose and poetry. Here, too, all new words and structures, if not immediately intelligible from the context, are

explained by marginal notes or illustrations. In addition, factual information is given in the margin. Part I covers the essentials of Latin grammar and introduces a basic vocabulary of some 1600 words. The 35 chapters form a sequence of scenes and incidents from the life of a Roman family in the second century A.D. Each chapter is divided into 3 or 4 lessons (lectiones) and consists of several text pages followed by a section on grammar, three exercises, and a list of new words. At the end of the volume there is a survey of inflexions, a Roman calendar, and alphabetical word-list and a grammatical index.

Since these technologies continue to develop at a rapid rate, the book is designed to familiarize clinicians with the more fundamental aspects and to enable them to make informed decisions about the application of this technology. This guide is written for the general medical reader and assumes little or no familiarity with medical informatics. It will also be useful for medical students as well as allied healthcare workers and research scientists who need to understand or apply these technologies in their practice.
