Growing marijuana indoor has seen a dramatic rise in popularity in recent years due to legalization in US and other countries. When it is cultivated properly, it produces good quality weed that is much better than the stuff that is sold on the streets. Indoor growing involves use of artificial light that is used as a replacement for sunlight. Growers have been known to employ hydroponics to grow marijuana indoors to great effect as well. Growing marijuana hydroponically indicates the use of water, nutrients and air instead of using soil. Since hydroponic system makes it easier for the roots to absorb the nutrients by bypassing the web of roots, it helps in faster growth of the plant. There are two basic advantages that growing marijuana indoors has over growing marijuana outdoors: security and space. When grown outdoors there is a threat of theft, torrential downpour or pest infestation and one also needs a substantial amount of space so it will be practically impossible for city dwellers to grow it. Also, unless one lives near the Equator, there will only be one harvest a year compared to growing indoors which can produce perpetual harvests. Growing marijuana is easy because it is a strong and fast growing plant and it can be discreetly done. It generally takes approximately 6 months for the plant to go from seed stage to a stage where it can be smoked. Here Is A Preview Of What You'll Learn To Get The Most Out Of Your Plants...
